

GH-900 Testantworten & GH-900 Online Test

Es ist keine Neuheit, dass die Schulungsunterlagen zur Microsoft GH-900 von Pass4Test guten Ruf von den Kandidaten gewinnen. Das heißt auch, dass die Schulungsunterlagen zur Microsoft GH-900 Zertifizierungsprüfung zuverlässig sind und den Kandidaten eher zum Bestehen der Prüfung verhelfen. Pass4Test ist immer der Best-Seller im Vergleich mit den anderen Websites. Er wird von den anderen anerkannt und hat einen guten Ruf. Wenn Sie sich an der Microsoft GH-900 Zertifizierungsprüfung beteiligen wollen, wählen Sie doch Pass4Test. Sie werden sicher bekommen, was Sie wollen. Wenn Sie keine Chance verpassen möchten, würden Sie auch nicht bereuen. Wenn Sie ein professioneller IT-Expert werden wollen, schicken Pass4Test in den Warenkorb.

Microsoft GH-900 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Thema 2	Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Thema 3	- Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI - CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Thema 4	- Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI - CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.

GH-900 PrüfungGuide, Microsoft GH-900 Zertifikat - GitHub Foundations

Die Microsoft GH-900 Dumps von Pass4Test können Ihnen helfen, diese Prüfung sehr einfach zu bestehen. Außerdem, wenn Sie zum ersten Mal die Microsoft GH-900 Prüfung teilnehmen, können Sie diese Dumps von Software-Version benutzen, weil es ist eine Software, die für Sie die Inhalte und die Form der aktuellen Prüfung simulieren. Sie können sich die aktuelle Prüfung zuvor fühlen. Danach können Sie sich nicht nervös fühlen bei der aktuellen Prüfung. Sie können auch sehr sorglos an dieser Microsoft GH-900 Prüfung teilnehmen. Und es ist auch wichtig für Sie, Ihr normales Niveau in der GH-900 Prüfung zu entfalten.

Microsoft GitHub Foundations GH-900 Prüfungsfragen mit Lösungen (Q61-Q66):

61. Frage

Which of the following are included as pre-defined repository roles?
(Each answer presents a complete solution. Choose three.)

- A. Delete
- B. Security
- C. Triage
- D. Maintain
- E. Write
- F. View

Antwort: C,D,E

Begründung:

GitHub provides several pre-defined repository roles that determine the level of access and permissions a user has within a repository. The roles that are included by default are:

Triage: Allows users to manage issues and pull requests without write access to the code.

Maintain: Provides more extensive access, including managing settings, but without full administrative control.

Write: Grants permission to push changes and manage issues and pull requests.

Roles like "Security" and "Delete" are not standard pre-defined roles, and "View" is generally referred to as "Read" in GitHub's permission structure.

62. Frage

What qualifier finds issues that mention a certain user?

- A. threads:
- B. mentions:
- C. mentioned:
- D. Smentioned:

Antwort: B

Begründung:

The qualifier mentions: is used in GitHub's search functionality to find issues that mention a certain user. For example, if you want to find all issues where a specific user is mentioned, you would use mentions:username. This helps in tracking where a user has been involved in discussions across issues or pull requests.

63. Frage

Who can be assigned to an Issue or pull request?
(Each answer presents a complete solution. Choose two.)

- A. Anyone who has commented on the Issue or pull request
- B. Anyone who has an enterprise GitHub account
- C. Anyone with write permissions to the repository
- D. Anyone who has a personal GitHub account

Antwort: A,C

Begründung:

In GitHub, issues and pull requests (PRs) are essential tools for managing work and collaboration in a project. Assigning individuals to these issues or PRs is a way to indicate responsibility for addressing the issue or completing the PR.

Anyone with write permissions to the repository:

Users who have write permissions to a repository can be assigned to issues and pull requests. Write permissions allow users to push changes to the repository, create branches, and modify issues and pull requests. Assigning them to an issue or PR ensures they are recognized as responsible for the task.

Anyone who has commented on the Issue or pull request:

GitHub allows you to assign issues or pull requests to users who have already engaged with the discussion by commenting on it. This feature is particularly useful for quickly assigning tasks to those who are already involved in the conversation.

Incorrect Options:

Option A is incorrect because having an enterprise GitHub account alone does not necessarily grant the ability to be assigned to issues or PRs. Permission to assign is based on repository-specific roles and permissions.

Option C is incorrect because not all personal GitHub accounts can be assigned to issues or PRs. The user needs either write permissions to the repository or must have commented on the issue or PR.

Reference:

GitHub Docs: Assigning Issues and Pull Requests

GitHub Docs: Permission Levels for a Repository

This detailed explanation provides clarity on GitHub's assignment mechanics for issues and pull requests, reflecting the platform's collaborative nature.

64. Frage

Which of the following are displayed in the "Pinned Repositories" section of a GitHub user profile?

- A. Repositories with the highest number of stars
- B. Repositories that are owned by organizations in which the user is a member
- C. Repositories that were personally selected to be highlighted
- D. Repositories with the most recent activity

Antwort: C

Begründung:

The "Pinned Repositories" section of a GitHub user profile displays repositories that were personally selected to be highlighted by the user. Users can choose which repositories they want to feature prominently on their profile, regardless of recent activity, star count, or organizational ownership.

65. Frage

If there are multiple README files, which of the following locations will be displayed first?

- A. .github
- B. /src
- C. Root
- D. /docs

Antwort: C

Begründung:

When multiple README files exist in different locations within a GitHub repository, the README.md file located in the root directory of the repository will be displayed first by default. This file serves as the main documentation for the repository and is automatically rendered on the repository's home page.

Root Directory:

Option C is correct because the README.md file in the root directory is prioritized and displayed first on GitHub. This is the standard behavior for how GitHub presents documentation.

Incorrect Options:

Option A (.github) is incorrect because while a README.md file in the .github directory might be used for certain configurations, it is not the first to be displayed.

Option B (/src) is incorrect because the README.md in the src directory is not prioritized over the root.

Option D (/docs) is incorrect because documentation in the /docs folder is typically secondary to the root README.md.
