Don't let the WGU Data Management – Foundations Exam exam stress you out! Prepare with our Data-Management-Foundations exam dumps and boost your confidence in the Data-Management-Foundations exam. We guarantee your road toward success by helping you prepare for the Data-Management-Foundations exam. Use the best WGU Data-Management-Foundations practice questions to pass your Data-Management-Foundations Exam with flying colors! In this way, the WGU Data Management – Foundations Exam certified professionals can not only validate their skills and knowledge level but also put their careers on the right track. By doing this you can achieve your career objectives.

## WGU Data-Management-Foundations Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Model deployment and storytelling: This section of the exam measures skills of Data Engineers and includes operationalizing machine learning models and presenting analytical results in a compelling narrative. The content addresses model validation and the communication of insights in ways that foster business understanding and action.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Statistical analysis: This section of the exam measures skills of Data Scientists and emphasizes the use of statistical techniques to interpret and summarize data. Candidates are assessed on applying descriptive and inferential statistics to draw valid conclusions from datasets.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Visualization: This part of the exam measures skills of Business Intelligence Analysts and covers the representation of information using charts, graphs, and dashboards. Candidates demonstrate the ability to effectively communicate findings and trends to a broad audience through visual displays.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Leadership and management: This section of the exam measures skills of Project Managers and explores leadership roles in managing data-driven projects and teams. Learners are introduced to the concepts of project planning, decision making, and stakeholder communication in the context of data management.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Data wrangling: This section of the exam measures skills of Data Analysts and involves preparing, cleaning, and transforming data into suitable formats for analysis. The focus is on resolving data inconsistencies, handling missing values, and reformatting data to maintain accuracy for analysis tasks.</li></ul>

# **WGU Data-Management-Foundations Latest Test Materials - Data-Management-Foundations Testdump**

If you want to be a more successful person and become the best, the first step you need to take is to have our Data-Management-Foundations exam questions. Get an internationally certified Data-Management-Foundations certificate to prove your strength. This is the best way. Your strength and efficiency will really bring you more job opportunities. And our Data-Management-Foundations study braindumps will help you pass the exam easily and get the certification for sure.

## **WGU Data Management – Foundations Exam Sample Questions (Q45-Q50):**

### **NEW QUESTION # 45**

Which phase of entity-relationship modeling refers to the maxima and minima of relationships and attributes?

- A. Partition
- B. Physical design
- **C. Cardinality**
- D. Attribute minimum

**Answer: C**

Explanation:

Cardinality defines the minimum and maximum number of occurrences of one entity in relation to another.

Example Usage in an ER Model:

\* One-to-Many (1:M): A customer can place multiple orders, but each order belongs to only one customer.

Customers (1) --- (M) Orders

\* Cardinality notation:

(1,1) # One-to-One

(0,M) # Zero-to-Many

(1,M) # One-to-Many

Why Other Options Are Incorrect:

\* Option B (Physical design) (Incorrect): Focuses on storage and indexing, not relationships.

\* Option C (Attribute minimum) (Incorrect): No such formal term in database modeling.

\* Option D (Partition) (Incorrect): Refers to dividing tables, not relationship constraints.

Thus, the correct answer is Cardinality, as it defines min/max constraints on relationships.

### **NEW QUESTION # 46**

What is the first step of the analysis phase for designing a database?

- A. Implement attributes
- B. Draw an entity-relationship (ER) diagram
- C. Determine cardinality
- **D. Identify entities**

**Answer: D**

Explanation:

The first step in database analysis is identifying entities, which are the real-world objects that need to be represented in the database.

Example Usage:

\* In a school system, the main entities could be:

Students, Courses, Instructors

Why Other Options Are Incorrect:

\* Option A (Determine cardinality) (Incorrect): Determining relationships comes after identifying entities.

\* Option C (Draw an ER diagram) (Incorrect): ER diagrams visualize entities but are not the first step.

\* Option D (Implement attributes) (Incorrect): Attributes are defined after entities are identified.

Thus, the correct answer is Identify entities, as entities form the foundation of the database model.

### **NEW QUESTION # 47**

Which product has an open-source license in addition to having a non-relational system?

- A. SQL Server
- B. MySQL
- C. Oracle Database
- D. **MongoDB**

**Answer: D**

Explanation:

MongoDB is a NoSQL (non-relational) database that is open-source and supports document-oriented storage

. It allows for flexible schema design and is optimized for big data applications.

\* Option A (Correct): MongoDB is a NoSQL database with an open-source AGPL license, making it both free to use and non-relational.

\* Option B (Incorrect): SQL Server is a relational database (RDBMS) developed by Microsoft and is not open-source.

\* Option C (Incorrect): MySQL is open-source but is a relational database (RDBMS), not a NoSQL system.

\* Option D (Incorrect): Oracle Database is relational and proprietary (not open-source).

**NEW QUESTION # 48**

Which relationship or association exists between a supertype and its subtype entities?

- A. **IsA relationship**
- B. Associative entity
- C. Weak entity
- D. Strong entity

**Answer: A**

Explanation:

In database modeling, the relationship between a supertype and its subtypes is called an IsA relationship.

Example Usage:

\* A Vehicle supertype may have Car and Truck subtypes.

Vehicle

### Car

### Truck

\* In ER diagrams, this is represented as:

Vehicle (Supertype)

|

### Car (Subtype)

### Truck (Subtype)

\* SQL Table Implementation:

sql

CREATE TABLE Vehicle (

VehicleID INT PRIMARY KEY,

Make VARCHAR(50),

Model VARCHAR(50)

);

CREATE TABLE Car (

VehicleID INT PRIMARY KEY,

FOREIGN KEY (VehicleID) REFERENCES Vehicle(VehicleID),

EngineType VARCHAR(50)

);

CREATE TABLE Truck (

VehicleID INT PRIMARY KEY,

FOREIGN KEY (VehicleID) REFERENCES Vehicle(VehicleID),

CargoCapacity INT

);

\* This structure preserves the IsA relationship between Vehicle (supertype) and Car/Truck (subtypes).

Why Other Options Are Incorrect:

\* Option A (Strong entity) (Incorrect): Strong entities do not rely on a supertype/subtype hierarchy.

\* Option C (Associative entity) (Incorrect): Used to resolve many-to-many relationships, not supertype / subtype relationships.

\* Option D (Weak entity) (Incorrect): Weak entities depend on a strong entity, but supertype-subtype relations use inheritance (not dependency).

Thus, the correct answer is IsA relationship, as it describes the inheritance hierarchy between supertypes and subtypes.

#### NEW QUESTION # 49

Which clause or statement in a CREATE statement ensures a certain range of data?

- A. CHECK
- B. FROM
- C. SET
- D. WHERE

**Answer: A**

Explanation:

The CHECK constraint is used in SQL to enforce rules on a column's values. It ensures that data inserted into a table meets specified conditions, such as range restrictions or logical rules.

Example Usage:

```
sql
CREATE TABLE Employees (
ID INT PRIMARY KEY,
Name VARCHAR(50),
Salary INT CHECK (Salary BETWEEN 30000 AND 150000)
);
```

\* This constraint ensures that salary values fall between 30,000 and 150,000.

\* If an INSERT or UPDATE statement tries to set Salary = 20000, it fails because it does not meet the CHECK condition.

Why Other Options Are Incorrect:

\* Option B (FROM) (Incorrect): Used in SELECT statements, not for constraints.

\* Option C (WHERE) (Incorrect): Filters rows in queries but does not enforce constraints.

\* Option D (SET) (Incorrect): Used for updating records (UPDATE table\_name SET column = value) but not for defining constraints.

Thus, CHECK is the correct answer, as it ensures that column values remain within an expected range.

#### NEW QUESTION # 50

.....

Our Data-Management-Foundations study materials present the most important information to the clients in the simplest way so our clients need little time and energy to learn our Data-Management-Foundations study materials. The clients only need 20-30 hours to learn and prepare for the test. For those people who are busy in their jobs, learning or other things this is a good news because they needn't worry too much that they don't have enough time to prepare for the test and can leisurely do their main things and spare little time to learn our Data-Management-Foundations Study Materials. So it is a great advantage of our Data-Management-Foundations study materials and a great convenience for the clients.
