Fortinet FCSS_SDW_AR-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">SD-WAN Configuration: This section of the exam measures the skills of network engineers and covers configuring a basic SD-WAN setup. Candidates are expected to demonstrate their ability to define SD-WAN members and zones effectively, ensuring foundational network segmentation and management.
Topic 2	<ul style="list-style-type: none">Centralized Management: This domain evaluates network administrators' competence in deploying and managing SD-WAN configurations centrally using FortiManager. It includes tasks such as implementing branch configurations and utilizing overlay templates to streamline network management.
Topic 3	<ul style="list-style-type: none">SD-WAN Troubleshooting: This part assesses the troubleshooting skills of network support specialists. Candidates should be able to diagnose and resolve issues related to SD-WAN rules, session behaviors, routing inconsistencies, and ADVPN connectivity problems to maintain seamless network operations.

Which statement best describe the role of the ADVPN device in handling traffic?

- A. This is a hub that has received a query from a spoke and has forwarded it to another spoke.
- B. This is a hub in a dual-region topology. The remote hub tunnel ID is 10.0.2.101.
- C. This is a spoke that has received a shortcut query from another spoke and has forwarded the response to its hub.
- D. This is a spoke. The kernel received a shortcut request and forwards the query to another spoke.

Answer: C

Explanation:

Within ADVPN topologies, shortcut requests and responses traverse spokes and hubs. Fortinet documentation states:

"When a spoke receives a shortcut query from another spoke, it may forward the response to its hub for validation or to facilitate dynamic shortcut tunnel setup. This mechanism allows direct spoke-to-spoke communication for optimized routing and performance, reducing latency and offloading the hub after initial control-plane mediation." This is a core benefit of ADVPN's dynamic shortcut feature.

NEW QUESTION # 67

Refer to the exhibits. You use FortiManager to manage the branch devices and configure the SD- WAN template. You have configured direct internet access (DIA) for the IT department users.

Now, you must configure secure internet access (SIA) for all local LAN users and have set the firewall policies as shown in the second exhibit.

Then, when you use the install wizard to install the configuration and the policy package on the branch devices, FortiManager reports

an error as shown in the third exhibit. Which statement describes why FortiManager could not install the configuration on the branches?

- A. You cannot install firewall policies that reference an SD-WAN member.
- B. You cannot install SIA and DIA rules on the same device.
- C. You cannot install firewall policies that reference an SD-WAN zone.
- D. You must direct SIA traffic to a VPN tunnel.

Answer: A

Explanation:

In FortiManager, firewall policies must reference SD-WAN zones, not individual SD-WAN members (interfaces like port1 or port2). The SIA rule incorrectly references port1, which is a member - not a zone - causing the installation failure during validation.

NEW QUESTION # 68

When you use the command `diagnose sys session list`, how do you identify the sessions that correspond to traffic steered according to SD-WAN rules?

- A. You identify sessions steered according to SD-WAN rules with the data `sdwan_service_id`.
- B. You cannot identify SD-WAN sessions. You must use the `sdwan.session filter`.
- C. You identify sessions steered according to SD-WAN rules with the data `vwl_mbr_seq`.
- D. You identify sessions steered according to SD-WAN rules with the flag `vwl`.

Answer: A

NEW QUESTION # 69

You have a FortiGate configuration with three user-defined SD-WAN zones and two members in each of these zones. One SD-WAN member is no longer in use in health-check and SD-WAN rules. You want to delete it. What happens if you delete the SD-WAN member from the FortiGate GUI?

- A. FortiGate displays an error message. SD-WAN zones must contain at least two members
- B. FortiGate accepts the deletion and removes routes as required.
- C. FortiGate accepts the deletion and places the member in the default SD-WAN zone.
- D. FortiGate displays an error message. You must use the CLI to delete an SD-WAN member.

Answer: B

Explanation:

In FortiOS, you can remove an SD-WAN member from the GUI as long as it is not in use in any health-checks, SD-WAN rules, or policies.

When you delete it, FortiGate will automatically clean up related routes (static or dynamic SD-WAN routes referencing that member).

NEW QUESTION # 70

Refer to the exhibits, which show the configuration of an SD-WAN rule and the corresponding rule status and routing table.

```

The administrator wants to understand the expected behavior for traffic matching the SD-WAN rule.

Based on the exhibits, what can the administrator expect for traffic matching the SD-WAN rule?

- A. The traffic will be routed over HUB1-VPN2
- B. The traffic will be routed over HUB1-VPN1.
- C. The traffic will be load balanced across all three overlays
- D. The traffic will be routed over HUB1-VPN3.

Answer: A

Explanation:

The rule is in SLA mode with two SLAs. From the status, HUB1-VPN2 and HUB1-VPN3 meet the SLA (sla(0x2) and sla(0x3)), while HUB1-VPN1 does not (sla(0x0)). Among members that meet SLA, FortiGate uses the configured order (priority-members 4 5 6) to pick the first eligible one- HUB1-VPN2-so traffic is routed over HUB1-VPN2.
