Answer: C

NEW QUESTION # 351

Refer to the exhibit.

Based on the configuration in this WLAN security setting, Which method can a client use to authenticate to the network?

- A. RADIUS token
- B. **username and password**
- C. text string
- D. certificate

**Answer: B**

Explanation:

The WLAN security settings indicate that the PSK (Pre-Shared Key) is enabled, which typically requires a passphrase or text string for authentication. However, since the question specifies that the configuration is based on the exhibit, and without the ability to view the exhibit, it's not possible to provide a definitive answer. Generally, if PSK is used, a text string would be the method for clients to authenticate to the network.

If 802.1X is enabled, then username and password would be used. References := Implementing and Operating Cisco Service Provider Network Core Technologies

#### NEW QUESTION # 352

Which two features does the Cisco SD-Access architecture add to a traditional campus network?  
(Choose two.)

- A. **identity services**
- B. private VLANs
- C. **software-defined segmentation**
- D. SD-WAN
- E. modular QoS

**Answer: A,C**

Explanation:

SD-Access uses logic blocks called fabrics which leverage virtual network overlays that are driven through programmability and automation to create mobility, segmentation, and visibility.

Network virtualization becomes easy to deploy through software-defined segmentation and policy for wired and wireless campus networks.
