# Quiz 2026 NCP-US-6.5: Nutanix Certified Professional - Unified Storage (NCP-US) v6.5–The Best Popular Exams

BTW, DOWNLOAD part of Fast2test NCP-US-6.5 dumps from Cloud Storage: https://drive.google.com/open?id=1xdwvX9MFcCV6a6UsK3znBZDi5gb9czeL

Whereas the Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) PDF dumps file offered by the Fast2test is simply a collection of real Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam questions that prepare you quickly for the final NCP-US-6.5 certification exam. Choose the right Fast2test NCP-US-6.5 Exam Questions formats and start this journey as soon as possible and become a certified Nutanix NCP-US-6.5 exam expert. Best of luck in exams and career!!

NCP-US-6.5 training materials are compiled by experienced experts, and therefore they cover most knowledge points of the exam, and you can also improve your ability in the process of learning. NCP-US-6.5 exam dumps not only contain quality but also contain certain quantity, and they will be enough for you to pass the exam and get the certificate. In addition, we are pass guarantee and money back guarantee if you fail to pass the exam. We offer you free update for 365 days after you purchase the NCP-US-6.5 traing materials.

100% Pass Nutanix - The Best NCP-US-6.5 - Popular Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Exams

If you study with our NCP-US-6.5 exam questions, you are bound to get the certification. The scientific design of NCP-US-6.5 preparation quiz allows you to pass exams faster, and the high passing rate will also make you more at ease. In this age of anxiety, being able to meet such a product is really fortunate for you. Choosing NCP-US-6.5 training engine will make you feel even more powerful. You can improve your ability more easily. When others work hard, you are already ahead!

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q99-Q104):

NEW QUESTION # 99
What process is initiated when a share is protected for the first time?

- A. A remote snapshot is created for the share.
- B. Share data movement is started to the recovery site.
- C. A local snapshot is created for the share.
- D. The share is created on the recovery site with a similar configuration.

Answer: C

Explanation:
Nutanix Files, part of Nutanix Unified Storage (NUS), supports data protection for shares through mechanisms like replication and snapshots. When a share is "protected for the first time," this typically refers to enabling a protection mechanism, such as a replication policy (e.g., NearSync, as seen in Question 24) or a snapshot schedule, to ensure the share's data can be recovered in case of failure.
Analysis of Options:
* Option A (Share data movement is started to the recovery site): Incorrect. While data movement to a recovery site occurs during replication (e.g., with NearSync), this is not the first step when a share is protected. Before data can be replicated, a baseline snapshot is typically created to capture the share's initial state. Data movement follows the snapshot creation, not as the first step.
* Option B (A remote snapshot is created for the share): Incorrect. A remote snapshot implies that a snapshot is created directly on the recovery site, which is not how Nutanix Files protection works initially. The first step is to create a local snapshot on the primary site, which is then replicated to the remote site as part of the protection process (e.g., via NearSync).
* Option C (The share is created on the recovery site with a similar configuration): Incorrect. While this step may occur during replication setup (e.g., the remote site's file server is configured to host a read-only copy of the share, as seen in the exhibit for Question 24), it is not the first process initiated.
The share on the recovery site is created as part of the replication process, which begins after a local snapshot is taken.
* Option D (A local snapshot is created for the share): Correct. When a share is protected for the first time (e.g., by enabling a snapshot schedule or replication policy), the initial step is to create a local snapshot of the share on the primary site. This snapshot captures the share's current state and serves as the baseline for protection mechanisms like replication or recovery. For example, in a NearSync setup, a local snapshot is taken, and then the snapshot data is replicated to the remote site.
Why Option D?
Protecting a share in Nutanix Files typically involves snapshots as the foundation for data protection. The first step is to create a local snapshot of the share on the primary site, which captures the share's data and metadata. This snapshot can then be used for local recovery (e.g., via Self-Service Restore) or replicated to a remote site for DR (e.g., via NearSync). The question focuses on the initial process, making the creation of a local snapshot the correct answer.
Exact Extract from Nutanix Documentation:
From the Nutanix Files Administration Guide (available on the Nutanix Portal):
"When a share is protected for the first time, whether through a snapshot schedule or a replication policy, the initial step is to create a local snapshot of the share on the primary site. This snapshot captures the share's current state and serves as the baseline for subsequent protection operations, such as replication to a remote site or local recovery."

NEW QUESTION # 100
An administrator is tasked with performing an upgrade to the latest Objects version.
What should the administrator do prior to upgrade Objects Manager?

- A. Upgrade Objects service
- B. Upgrade MSP
- C. Upgrade Lifecycle Manager
- D. Upgrade AOS

Answer: D

Explanation:
Before upgrading Objects Manager, the administrator must upgrade AOS to the latest version. AOS is the core operating system that runs on each node in a Nutanix cluster and provides the foundation for Objects Manager and Objects service. Upgrading AOS will ensure compatibility and stability for Objects components.
References: Nutanix Objects Administration Guide, Acropolis Operating System Upgrade Guide

NEW QUESTION # 101
Users are complaining about having to reconnecting to share when there are networking issues.
Which files feature should the administrator enable to ensure the sessions will auto-reconnect in such events?

- A. Connected Shares
- B. Durable File Handles

- C. Multi-Protocol Shares
- D. Workload Optimization

Answer: B

Explanation:
The Files feature that the administrator should enable to ensure the sessions will auto-reconnect in such events is Durable File Handles. Durable File Handles is a feature that allows SMB clients to reconnect to a file server after a temporary network disruption or a client sleep state without losing the handle to the open file. Durable File Handles can improve the user experience and reduce the risk of data loss or corruption. Durable File Handles can be enabled for each share in the Files Console. References: Nutanix Files Administration Guide, page 76; Nutanix Files Solution Guide, page 10

NEW QUESTION # 102

An administrator needs to scale out an existing Files instance. Based on the Company's requirements, File instance has four FSVMs configured and needs to expand to six.
How many additional Client IP addresses and Storage IP addresses does the administrator require to complete this task?

- A. 2 Client IPs and 3 Storage IPs
- B. 3 Client IPs and 3 Storage IPs
- C. 2 Client IPs and 2 Storage IPs
- D. 3 Client IPs and 2 Storage IPs

Answer: C

Explanation:
To scale out an existing Files instance, the administrator needs to add one Client IP and one Storage IP for each additional FSVM. Since the Files instance needs to expand from four FSVMs to six FSVMs, the administrator needs to add two Client IPs and two Storage IPs in total. The Client IPs are used for communication between the FSVMs and the clients, while the Storage IPs are used for communication between the FSVMs and the CVMs. References: Nutanix Files Administration Guide, page 28; Nutanix Files Solution Guide, page 7

NEW QUESTION # 103

Which two statements are true about HA for a file server? (Choose two.)

- A. Affinity rules affect HA.
- B. Multiple FSVMs can share a single host.
- C. Files reassigns the IP address of the FSVM to another FSVM.
- D. Shares availability are not impacted for several minutes.

Answer: A,C

Explanation:
Nutanix Files, part of Nutanix Unified Storage (NUS), uses File Server Virtual Machines (FSVMs) to manage file services. High Availability (HA) in Nutanix Files ensures that shares remain accessible even if an FSVM or host fails. HA mechanisms include IP reassignment, FSVM distribution, and integration with hypervisor HA features.
Analysis of Options:
* Option A (Files reassigns the IP address of the FSVM to another FSVM): Correct. In a Nutanix Files HA scenario, if an FSVM fails (e.g., due to a host failure), the IP address of the failed FSVM is reassigned to another FSVM in the file server. This ensures that clients can continue accessing shares without disruption, as the share's endpoint (IP address) remains the same, even though the backend FSVM handling the request has changed.
* Option B (Shares availability are not impacted for several minutes): Incorrect. While Nutanix Files HA minimizes downtime, there is typically a brief disruption (seconds to a minute) during an FSVM failure as the IP address is reassigned and the new FSVM takes over. The statement "not impacted for several minutes" implies a longer acceptable downtime, which is not accurate-HA aims to restore availability quickly, typically within a minute.
* Option C (Multiple FSVMs can share a single host): Incorrect. Nutanix Files HA requires that FSVMs are distributed across different hosts to ensure fault tolerance. By default, one FSVM runs per host, and Nutanix uses anti-affinity rules to prevent multiple FSVMs from residing on the same host.
This ensures that a single host failure does not impact multiple FSVMs, which would defeat the purpose of HA.
* Option D (Affinity rules affect HA): Correct. Nutanix Files leverages hypervisor HA features (e.g., AHV HA) and uses

affinity/anti-affinity rules to manage FSVM placement. Anti-affinity rules ensure that FSVMs are placed on different hosts, which is critical for HA-if multiple FSVMs were on the same host, a host failure would impact multiple FSVMs, reducing availability. These rules directly affect how HA functions in a Files deployment.

Selected Statements:

* A: IP reassignment is a core HA mechanism in Nutanix Files to maintain share accessibility during FSVM failures.

* D: Affinity (specifically anti-affinity) rules ensure FSVM distribution across hosts, which is essential for effective HA.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"High Availability (HA) in Nutanix Files ensures continuous share access during failures. If an FSVM fails, its IP address is reassigned to another FSVM in the file server to maintain client connectivity. Nutanix Files uses anti-affinity rules to distribute FSVMs across different hosts, ensuring that a single host failure does not impact multiple FSVMs, which is critical for HA."

NEW QUESTION # 104

......

Life is beset with all different obstacles that are not easily overcome. For instance, NCP-US-6.5 exams may be insurmountable barriers for the majority of population. However, with the help of our exam test, exams are no longer problems for you. The reason why our NCP-US-6.5 Training Materials outweigh other study prep can be attributed to three aspects, namely free renewal in one year, immediate download after payment and simulation for the software version.

Valid Exam NCP-US-6.5 Book: https://www.fast2test.com/NCP-US-6.5-premium-file.html

If you purchase our Nutanix NCP-US-6.5 practice study pdf, you can enjoy the full-service of our excellent staff, Getting the NCP-US-6.5 exam certification is an important way for checking the ability of people in today's society, They check the update of the NCP-US-6.5 exam collection everyday and the latest version will send to your email once there are latest NCP-US-6.5 actual exam dumps (Nutanix Certified Professional - Unified Storage (NCP-US) v6.5), Nutanix Popular NCP-US-6.5 Exams You will stand out from the crowd both in your studies and your work.

So you rest assured that with Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam dumps you can streamline your NCP-US-6.5 exam preparation process and get confidence to pass Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam in first attempt.

2026 Excellent Popular NCP-US-6.5 Exams | 100% Free Valid Exam Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Book

Much of our greatest architecture is devoted to these structures, Reliable NCP-US-6.5 Test Forum which usually rely on the powerful combination of symbolic spaces and choreographed ritual to facilitate a spiritual connection.

If you purchase our Nutanix NCP-US-6.5 practice study pdf, you can enjoy the full-service of our excellent staff, Getting the NCP-US-6.5 exam certification is an important way for checking the ability of people in today's society.

They check the update of the NCP-US-6.5 exam collection everyday and the latest version will send to your email once there are latest NCP-US-6.5 actual exam dumps (Nutanix Certified Professional - Unified Storage (NCP-US) v6.5).

You will stand out from the crowd both in your studies and your work, You NCP-US-6.5 are only supposed to practice Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 guide torrent for about 20 to 30 hours before you are fully equipped to take part in the examination.
