

# NSE6\_FSR-7.3 Valid Test Book, NSE6\_FSR-7.3 Valid Exam Format

BONUS!!! Download part of Actual4Labs NSE6\_FSR-7.3 dumps for free: <https://drive.google.com/open?id=1-MGSkBg8gmune-mkRS4AwX2ZO4O2zE8E>

There is no exaggeration that you can be confident about your coming exam just after studying with our NSE6\_FSR-7.3 preparation materials for 20 to 30 hours. Tens of thousands of our customers have benefited from our NSE6\_FSR-7.3 Exam Dumps and passed their exams with ease. The data showed that our high pass rate is unbelievably 98% to 100%. Without doubt, your success is 100% guaranteed with our NSE6\_FSR-7.3 training guide.

## Fortinet NSE6\_FSR-7.3 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• SOC and SOAR Overview: Security Engineers can gain an understanding of SOC and SOAR deployment requirements, including licensing management for FortiSOAR.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• System Configuration: FortiSOAR requires careful setup of applications for FortiSoar System Administrators. It covers system fixtures, and proxy settings to function optimally.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Security Management: This section covers how Security Engineers implement role-based access control (RBAC) and set up team structures within FortiSOAR to streamline security management.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• System Monitoring and Maintenance: For FortiSOAR Administrators, this domain covers using various tools for system monitoring to ensure consistent performance. This includes how to regularly oversee FortiSOAR processes, along with other critical functions.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• System Operation: For System Engineers, this section covers Elasticsearch data management that may need to be externalized or migrated to accommodate system needs. Additionally, this section covers configuring the recommendation engine and utilizing the war room functionality.</li></ul>

## NSE6\_FSR-7.3 Valid Exam Format - NSE6\_FSR-7.3 100% Correct Answers

The price for NSE6\_FSR-7.3 exam torrent is quite reasonable, you can afford it no matter you are a student or you are an employee in the company. You just need to spend some money, and you can get a certificate. In addition, NSE6\_FSR-7.3 exam dumps are high-quality and accuracy, and you can pass the exam successfully by using them. We also pass guarantee and money back guarantee for your failure of the exam after using NSE6\_FSR-7.3 Exam Dumps. We offer you free update for 365 days after purchasing, and the update version will be sent to your email address automatically.

### Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q39-Q44):

#### NEW QUESTION # 39

Which two ports must be open between FortiSOAR HA nodes'? (Choose two.)

- A. Port 6380
- B. Port 25
- C. Port 9200
- D. Port 5432

**Answer: C,D**

Explanation:

In a FortiSOAR HA configuration, certain ports must be open for communication between nodes. Port 5432 is required for PostgreSQL database communication, which is essential for data replication between HA nodes.

Port 9200 is used by Elasticsearch, which FortiSOAR leverages for indexing and search functions across the nodes. These ports must be accessible between nodes to ensure seamless operation and data consistency within the cluster.

#### NEW QUESTION # 40

Refer to the exhibit.

The screenshot shows the FortiSOAR User Profile configuration page. The 'Status' dropdown is set to 'Inactive'. The 'Username' field contains 'jsmith'. The 'Access Type' is set to 'Named'. The 'User Type' is set to 'Application User'. The 'Email' field contains 'jsmith@abc.com'. The '2-Factor' section is visible below.

Why is this user's account inactive? (Choose one answer)

- A. The user has not reset the password for the account.
- B. The user does not have a valid email ID for the account.
- C. The user has exceeded the maximum number of authentication tries for a one-hour period.
- D. The user has exceeded the maximum number of allowed user accounts.

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From FortiSOAR 7.3 Exact Extract study guide:

According to the FortiSOAR 7.3 Administration and Deployment Guides, specifically in the "Licensing FortiSOAR" and "Security Management" sections:

- \* Licensing Enforcement: FortiSOAR strictly enforces the number of active users based on the installed license. The license specifies the maximum number of active users allowed in the system at any given point in time.
- \* User Status (Active vs. Inactive): When the number of active users reaches the limit defined by the license, any additional users created or imported will be set to an Inactive status by default. An administrator cannot change their status to "Active" until an existing active user is deactivated or deleted, or the license is upgraded to support more users.
- \* Locked Status (Option A): It is important to distinguish between "Inactive" and "Locked." Users become temporarily locked out of FortiSOAR when they exceed the configured number of authentication attempts (defaulting to 5 times) within a specific period. A locked user profile will typically display a "Locked" indicator or a checkbox to "Unlock" rather than a simple "Inactive" status.
- \* Other Options: While an email ID is required for account creation, its validity does not automatically trigger an "Inactive" status (Option B). Similarly, a required password reset (Option C) forces a password change upon login but does not disable the account.

### NEW QUESTION # 41

A security analyst has reported unauthorized access to System Configuration. You must review the user's current level of access, and then restrict their access according to your organization's requirements. As part of your auditing process, which two actions should you perform? (Choose two.)

- A. View the user's effective role permissions, and then investigate which role is providing that access.
- B. Remove the create, read, update, and delete (CRUD) permissions or roles that the user does not require.
- C. Remove all record ownership that is assigned to the user.
- D. Review the user's learn hierarchy to ensure that the appropriate relationships are configured.

Answer: A,D

Explanation:

To audit and restrict a user's access within FortiSOAR, particularly in response to unauthorized access reports, it's necessary to review the user's effective role permissions. This involves checking which roles grant the user access to the System Configuration module and adjusting as needed. Additionally, reviewing the user's team hierarchy ensures that the user's access aligns with the organization's policies. Misconfigurations in team relationships can sometimes inadvertently provide elevated access; hence, confirming that the team setup is correct is a critical part of the auditing process.

### NEW QUESTION # 42

Refer to the exhibit.

The screenshot displays the FortiSOAR configuration interface for System Health. At the top, the 'Service' is set to 'SMTP' and the 'Email' is 'csadmin@internal.lab'. Below this, a note states 'Please ensure your SMTP service is configured.' The 'Monitoring Interval (Minutes)' is set to '5'. The 'System Health Thresholds' section includes fields for 'Memory Utilization (%)' (80), 'CPU Utilization (%)' (80), 'Disk Utilization (%)' (80), 'Swap Memory Utilization (%)' (50), 'Workflow Queue Threshold' (100), and 'WAL Files Size (GB)' (20). The 'Cluster Health' section includes fields for 'Missed Heartbeat Count' (3) and 'Replication Lag (GB)' (3). A large watermark 'actual4labs.com' and the 'FORTINET' logo are overlaid on the image.

How long after the cyops-ha service goes down will the heartbeat missed notification be sent to the administrator?

- A. 3 minutes
- B. 5 minutes
- C. 60 minutes
- D. 15 minutes

**Answer: C**

Explanation:

In FortiSOAR's high availability (HA) setup, if the cyops-ha service becomes unresponsive, the system is configured to send a "heartbeat missed" notification after a specified period, which in this case is 60 minutes. This delay allows for transient issues to be resolved without triggering immediate alerts, while also ensuring that administrators are informed of prolonged service disruptions. Timely notifications about the cyops-ha service's status help maintain the reliability and responsiveness of the HA environment.

#### NEW QUESTION # 43

Which three activities can be achieved using the FortiSOAR queue and shift management feature? (Choose three)

- A. Set up queue meeting rooms
- B. Designate a coordinator to monitor queues and shifts
- C. Initiate shift handovers
- D. Create queue rules based on matching conditions
- E. Generate shift leads and shift members

**Answer: C,D,E**

Explanation:

The FortiSOAR queue and shift management feature enables several key activities for managing shifts and queues. Administrators can initiate shift handovers, allowing for smooth transitions between shift leads and members. They can also designate specific roles within shifts, including shift leads and members, to define responsibilities. Additionally, queue rules can be established based on certain conditions, ensuring that incidents and tasks are assigned according to predefined criteria, which helps streamline operations and improve response times.

#### NEW QUESTION # 44

.....

As is known to us, our company is professional brand established for compiling the NSE6\_FSR-7.3 exam materials for all candidates. The NSE6\_FSR-7.3 guide files from our company are designed by a lot of experts and professors of our company in the field. We can promise that the NSE6\_FSR-7.3 certification preparation materials of our company have the absolute authority in the study materials market. We believe that the study materials designed by our company will be the most suitable choice for you. You can totally depend on the NSE6\_FSR-7.3 Guide files of our company when you are preparing for the exam
