

# 100% Pass Quiz Archer - Archer-Expert - Archer Certified Administrator-Expert Latest Training Online

2026 Latest Prep4cram Archer-Expert PDF Dumps and Archer-Expert Exam Engine Free Share: [https://drive.google.com/open?id=1oaf\\_SoQftSiylz39NgaHljw0KpSlc2PT](https://drive.google.com/open?id=1oaf_SoQftSiylz39NgaHljw0KpSlc2PT)

All these Archer Certified Administrator-Expert (Archer-Expert) exam dumps formats contain real, updated, and error-free Archer Certified Administrator-Expert (Archer-Expert) exam questions that prepare you for the final Archer-Expert exam. To give you an idea about the top features of Archer Certified Administrator-Expert (Archer-Expert) exam dumps, a free demo download facility is being offered to Archer Certification Exam candidates.

If you want to buy Archer Archer-Expert exam information, Prep4cram will provide the best service and the best quality products. Our exam questions have been authorized by the manufacturers and third-party. And has a large number of IT industry professionals and technology experts, based on customer demand, according to the the outline developed a range of products to meet customer needs. Archer Archer-Expert Exam Certification with the highest standards of professional and technical information, as the knowledge of experts and scholars to study and research purposes. All of the products we provide have a part of the free trial before you buy to ensure that you fit with this set of data.

## Updated Archer-Expert Test Cram & Archer-Expert Test Cram

Each user's situation is different. Archer-Expert simulating exam will develop the most suitable learning plan for each user. We will contact the user to ensure that they fully understand the user's situation, including their own level, available learning time on Archer-Expert Training Questions. Our experts will fully consider the gradual progress of knowledge and create the most effective learning plan on the Archer-Expert exam questions for you.

## Archer Certified Administrator-Expert Sample Questions (Q14-Q19):

### NEW QUESTION # 14

If a Data Feed is stuck in the status of "Pending", which service should you check first to troubleshoot the issue?

- A. Configuration service
- B. Indexing service
- C. Job Engine service
- D. Queuing service

**Answer: C**

Explanation:

In modern Archer environments (post-version 6.x), the Archer Job Engine Service is the primary service responsible for executing asynchronous tasks, including Data Feeds. When a Data Feed is initiated, it is placed in the queue. If the status remains "Pending," it indicates that the task has been recognized by the database, but no service has "picked it up" to begin processing.

As detailed in the Archer Administration II troubleshooting modules, the Job Engine is the "worker" that handles these requests. If this service is stopped, paused, or stuck on the application server, all scheduled and manual feeds will remain in a "Pending" state indefinitely. While the Queuing Service (Option D) is involved in the initial placement of the task, the actual execution and the transition out of "Pending" into "In Progress" is the responsibility of the Job Engine. The Indexing Service (Option C) handles search keyword indexing and is unrelated to data feed execution.

### NEW QUESTION # 15

Question display rules are set up by an administrator to conditionally show or hide questions in a questionnaire. How often are these rules evaluated?

- A. Every time the questionnaire record is updated
- B. Every time the target record is saved
- C. Only when the questionnaire record is created
- D. Every time the target record is updated

**Answer: A**

Explanation:

In the Archer Questionnaire module, Display Rules function similarly to Conditional Layouts in standard applications, but they operate within the specific context of the Assessment/Questionnaire record. These rules are "active" logic. According to the Questionnaires and Assessment Maintenance curriculum, these rules are evaluated every time the questionnaire record is updated.

This means as a user is actively answering questions, the system evaluates the responses in real-time. If a user selects "Yes" to a specific question, the display rule immediately triggers to show the follow-up questions. If they change it to "No," the follow-up questions are hidden. This real-time evaluation ensures a streamlined user experience, preventing the user from seeing irrelevant questions. This is distinct from a "Save" event (Option D); if the rules only evaluated on save, the user would have to constantly save the record to see the next set of questions, which would be highly inefficient.

### NEW QUESTION # 16

What type of Data Feed Transporter would you use to move information from one application into another application within the same Archer instance?

- A. Archer Web Services Transporter
- B. File Transporter
- C. Database Query Transporter
- D. JavaScript Transporter

**Answer: A**

Explanation:

When moving data between two applications within the same Archer environment (often called an "Archer-to- Archer" feed), the Archer Web Services Transporter is the standard and recommended method. As detailed in the Archer Administration II Data Feed module, this transporter uses Archer's own API (Web Services) to authenticate and "read" a report from the source application. The transporter then passes that data to the Target section of the feed for mapping. Using a Database Query Transporter (Option C) directly against the Archer back-end SQL tables is strongly discouraged and often unsupported because it bypasses the application logic and security layers. The File Transporter (Option B) would require an intermediate step of exporting data to a CSV first. The Web Services Transporter allows for a direct, secure, and API-compliant way to keep data synchronized between internal applications, such as feeding "Findings" from various modules into a centralized "Master Findings" application.

### NEW QUESTION # 17

The main goal of using SSO in an Archer environment is to:

- A. Have end users insert their username and password each time they log into Archer
- B. Bypass the default Archer Security Parameters for the user
- C. Facilitate the login experience to Admin users only
- **D. Facilitate the login experience to end users by using only one set of credentials across all their applications**

**Answer: D**

Explanation:

The primary driver for Single Sign-On (SSO) in an Archer environment is user convenience and centralized identity management. As taught in Archer Administration II, the "goal" of SSO is to reduce the friction of accessing the platform. By allowing users to leverage their existing corporate credentials (via SAML, Windows Integrated, or LDAP), they can access Archer without needing to maintain a separate, "native" Archer password.

This strategy improves security by centralizing credential management in a single Identity Provider (IdP), where Multi-Factor Authentication (MFA) and account revocation policies can be strictly enforced. Option A is incorrect because SSO actually helps enforce enterprise security parameters rather than bypassing them.

Option B is false because SSO is intended for all users, not just admins. Option C describes the opposite of SSO. Ultimately, the successful implementation of SSO ensures that users have a seamless transition into Archer while the organization maintains a high standard of access control.

### NEW QUESTION # 18

Which service must be installed and enabled on all Web and Services Servers?

- A. Archer Core Service
- B. Archer Workflow Service
- C. Archer Queuing Service
- **D. Archer Configuration Service**

**Answer: D**

Explanation:

In a distributed (multi-host) Archer environment, the Archer Configuration Service is the most critical underlying component that must exist on every server in the web and services tiers. As taught in Archer Administration II, this service is responsible for "registering" the server with the Archer Control Panel (ACP).

The Configuration Service allows the central ACP to communicate with each node in the cluster to manage settings, update the nlog.config files, and ensure that all servers are using the correct database connection strings. While the Queuing Service (Option C) might only reside on the Services server, and the Workflow Service (Option B) is specific to AWF tasks, the Configuration Service is the "heartbeat" that connects any given Archer server to the instance's central management framework. If this service is stopped on a web server, that server will effectively become "orphaned" and will not be able to process user requests correctly or receive updates from the ACP.

### NEW QUESTION # 19

.....

Have you thought of how to easily pass Archer Archer-Expert test? Have you found the trick? If you don't know what to do, I'll help you. In actual, there are many methods to sail through Archer-Expert exam. One is to learn exam related knowledge Archer-Expert certification test demands. Are you doing like this? However the above method is the worst time-waster and you cannot get the desired effect. Bussing at work, you might have not too much time on preparing for Archer-Expert Certification test. Try Prep4cram Archer Archer-Expert exam dumps. Prep4cram dumps can absolutely let you get an unexpected effect.

**Updated Archer-Expert Test Cram:** [https://www.prep4cram.com/Archer-Expert\\_exam-questions.html](https://www.prep4cram.com/Archer-Expert_exam-questions.html)

With our Archer-Expert test engine, you set the test time as you like, Once you choose our Archer-Expert exam practice, we will do our best to provide you with a full range of thoughtful services, Besides, you can print the Archer-Expert study torrent into papers, which can give a best way to remember the questions, If you get a certification (with Archer-Expert guide torrent) you can get a good position in many companies and also realize your dream of financial free as you may know IT workers' salary is very high in
