Trustable FCSS_SASE_AD-24 Instant Access, Exam Dumps FCSS_SASE_AD-24 Collection

Our company always lays great emphasis on service. All of our works have good sense of service. Once you browser our website and select the FCSS_SASE_AD-24 exam questions, we have arrange all study materials separately and logically. You will know the details if you click the FCSS_SASE_AD-24 practice quiz. You will find that it is easy, fast and convenient. And if you have something confused on our FCSS_SASE_AD-24 learning braindumps, then you can contact with our service online or send email to us. We will help you in the first time.

Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which two advantages does FortiSASE bring to businesses with multiple branch offices? (Choose two.)

- A. it offers customizable dashboard views for each branch location
- B. It enables seamless integration with third-party firewalls.
- C. It eliminates the need to have an on-premises firewall for each branch.
- D. It offers centralized management for simplified administration.

Answer: C,D

Explanation:

FortiSASE brings the following advantages to businesses with multiple branch offices:

Centralized Management for Simplified Administration:

FortiSASE provides a centralized management platform that allows administrators to manage security policies, configurations, and monitoring from a single interface.

This simplifies the administration and reduces the complexity of managing multiple branch offices.

Eliminates the Need for On-Premises Firewalls:

FortiSASE enables secure access to the internet and cloud applications without requiring dedicated on-premises firewalls at each branch office.

This reduces hardware costs and simplifies network architecture, as security functions are handled by the cloud-based FortiSASE solution.

Reference:

FortiOS 7.2 Administration Guide: Provides information on the benefits of centralized management and cloud-based security solutions.

FortiSASE 23.2 Documentation: Explains the advantages of using FortiSASE for businesses with multiple branch offices, including reduced need for on-premises firewalls.

NEW QUESTION # 11

How does FortiSASE support Zero Trust Network Access (ZTNA)?

Response:

- A. By managing user credentials centrally
- **B. By providing application-level access controls**
- C. By enforcing network-level security policies
- D. By encrypting all network traffic

Answer: B

NEW QUESTION # 12

Which FortiSASE feature can you use to see a list of Software-as-a-Service (SaaS) applications and health-check metrics for first-mile connectivity between the geographical points of presence (PoPs) provisioned for your FortiSASE instance and these SaaS applications?

Response:

- **A. digital experience monitoring DEM**
- B. event logs
- C. security logs
- D. FortiView

Answer: A

NEW QUESTION # 13

Which of the following describes the FortiSASE inline-CASB component?

- A. It uses API to connect to the cloud applications.
- B. It detects data at rest.
- C. It provides visibility for unmanaged locations and devices.
- **D. It is placed directly in the traffic path between the endpoint and cloud applications.**

Answer: D

Explanation:

The FortiSASE inline-CASB (Cloud Access Security Broker) component is designed to provide real-time security and visibility by being placed directly in the traffic path between the endpoint and cloud applications. Inline-CASB inspects traffic as it flows to and from cloud applications, enabling enforcement of security policies, detection of threats, and prevention of unauthorized access. This approach ensures that all interactions with cloud applications are monitored and controlled in real time.

Here's why the other options are incorrect:

A. It provides visibility for unmanaged locations and devices: While inline-CASB enhances visibility, its primary function is to inspect

and secure traffic in real time. Visibility for unmanaged locations and devices is typically achieved through other components like endpoint agents or API-based CASB.

C . It uses API to connect to the cloud applications: API-based CASB is a different approach that relies on APIs provided by cloud applications to monitor and manage data. Inline-CASB operates directly in the traffic flow rather than using APIs.

D . It detects data at rest: Detecting data at rest is typically handled by Data Loss Prevention (DLP) tools or API-based CASB solutions. Inline-CASB focuses on inspecting traffic in motion, not data stored in cloud applications.

NEW QUESTION # 14

When configuring logging settings in FortiSASE, what is essential to capture for effective security analysis?

Response:

- A. Debug level logs for everyday operations
- **B. Error and event logs related to security incidents**
- C. Continuous video logs of server rooms
- D. Logs of all printed documents

Answer: B

NEW QUESTION # 15

.....

I can assure you that we will provide considerate on line after sale service about our FCSS_SASE_AD-24 exam questions for you in twenty four hours a day, seven days a week.
