Nowadays, using computer-aided software to pass the 2V0-17.25 exam has become a new trend. Because the new technology enjoys a distinct advantage, that is convenient and comprehensive. In order to follow this trend, our company product such a 2V0-17.25 exam questions that can bring you the combination of traditional and novel ways of studying. The passing rate of our study material is up to 99%. If you are not fortune enough to acquire the 2V0-17.25 Certification at once, you can unlimitedly use our 2V0-17.25 product at different discounts until you reach your goal and let your dream comes true.

To make sure that our candidates can learn the 2V0-17.25 preparation materials in the least time with the least efforts, they have compiled all of the content to be contained in the shortest possible number of 2V0-17.25 exam questions. Additionally, the 2V0-17.25 exam questions and answers have been designed on the format of the real exam so that the candidates learn it without any extra effort. We have carefully considered every aspects for our customers. And our 2V0-17.25 Practice Braindumps are perfect in every detail.

## Valid 2V0-17.25 Test Voucher | Online 2V0-17.25 Version

TrainingDumps is a trusted platform that is committed to helping VMware 2V0-17.25 exam candidates in exam preparation. The 2V0-17.25 exam questions are real and updated and will repeat in the upcoming 2V0-17.25 exam dumps. By practicing again and again you will become an expert to solve all the VMware Cloud Foundation 9.0 Administrator exam questions completely and before the exam time. As far as the VMware 2V0-17.25 Practice Test are concerned, these VMware 2V0-17.25 practice questions are designed and verified by the experience and qualified VMware Cloud Foundation 9.0 Administrator exam trainers.

## VMware Cloud Foundation 9.0 Administrator Sample Questions (Q34-Q39):

### NEW QUESTION # 34

An administrator is tasked to monitor configuration drifts of vSphere clusters in a VMware Cloud Foundation (VCF) deployment.

What three steps need to be completed to achieve this goal? (Choose three).

- A. Create a Schedule Drift Detection in VCF Operations.
- B. vCenter version must be 8.0 U3 or later.
- C. Create a config template in VCF Operations.
- D. Assign the config template to a Policy.
- E. vCenter must be configured with a VCF Operations collector.
- F. vCenter version must be 9.0 or later.
- G. Configure vSphere Configuration Profiles for every cluster.

**Answer: A,B,G**

Explanation:

To monitor configuration drift of vSphere clusters in a VMware Cloud Foundation environment, the administrator must:

\* Ensure vCenter version is 8.0 U3 or later, since configuration drift detection depends on vSphere Configuration Profiles introduced in this version.

\* Configure vSphere Configuration Profiles for each cluster to define the desired configuration baseline.

\* Create a Scheduled Drift Detection in VCF Operations so VCF can automatically compare current configurations against the defined profiles and detect drifts.

### NEW QUESTION # 35

An administrator needs to deploy a Kubernetes cluster on a vSphere IaaS control plane (formerly vSphere with Tanzu) to host a new application.

Which three steps should be followed to successfully deploy the Kubernetes cluster? (Choose three.)

- A. Enable Workload Management on the vSphere Cluster.
- B. Create a new VM template for the Kubernetes nodes.
- C. Configure a vSphere Namespace and assign resource quotas.
- D. Configure a Load Balancer for the Kubernetes control plane nodes.
- E. , Deploy a vSphere Pod Service.

**Answer: A,C,D**

Explanation:

A Load Balancer is needed for the Kubernetes control plane nodes to distribute traffic across the control plane and ensure high availability for the Kubernetes management layer.

A vSphere Namespace must be configured to define a logical boundary for Kubernetes workloads, and resource quotas help ensure that resources are allocated appropriately for the workloads.

Enabling Workload Management on the vSphere Cluster is necessary to integrate Kubernetes with vSphere and manage the lifecycle of Kubernetes clusters using vSphere with Tanzu.

### NEW QUESTION # 36

Which vSphere feature helps you reclaim idle or unused disk space within guest operating systems by coordinating the hypervisor and OS?

- A. Transparent Page Sharing
- B. Storage I/O Control
- C. UNMAP / Guest OS trim
- D. Ballooning

**Answer: C**

Explanation:

The UNMAP feature (sometimes referred to as trim for SSDs) reclaims blocks that guest OSes free, updating the storage system so that this space can be reused.

### NEW QUESTION # 37

An administrator has been tasked with creating an alert in VMware Cloud Foundation (VCF) Operations with the following settings:

- Wait cycle: 2
- Cancel cycle: 2

Assuming the alert is not resolved, how much time elapses by default between the symptom triggering and the alert automatically cancelling itself?

- A. 4 minutes
- B. 10 minutes
- C. 40 minutes
- **D. 20 minutes**

**Answer: D**

Explanation:

Wait Cycle: The number of consecutive collection cycles that the symptom must remain true before the alert is triggered.

Cancel Cycle: The number of consecutive collection cycles that the symptom must not be true before the alert is canceled.

Default Collection Interval: VCF Operations collects data every 5 minutes by default.

Given the settings:

Wait cycle = 2 The condition must persist for  $2 \times 5$  minutes = 10 minutes before the alert triggers.

Cancel cycle = 2 The condition must clear for  $2 \times 5$  minutes = 10 minutes before the alert cancels.

Thus, the total elapsed time between the symptom being triggered and the alert being automatically canceled (if unresolved) is 10 minutes wait + 10 minutes cancel = 20 minutes.

### NEW QUESTION # 38

An administrator is tasked to upgrade an existing VMware Cloud Foundation (VCF) 5.2 deployment to VCF 9.0. The existing deployment includes the following components:

- Aria Operations
- Aria Automation

Which three components must be upgraded or deployed first? (Choose three.)

- A. Automatically upgrade Aria Automation to VCF Automation 9.0.
- **B. Deploy VCF Installer appliance.**
- **C. Deploy of an NSX Manager 9.0 instance.**
- D. Automatically upgrade Aria Operations to VCF Operations 9.0.
- **E. Manually upgrade Aria Operations to VCF Operations 9.0.**
- F. Manually upgrade Aria Automation to VCF Automation 9.0.

**Answer: B,C,E**

Explanation:

The VCF Installer appliance must be deployed first because it orchestrates the VCF 9.0 bring-up and upgrade workflow. An NSX Manager 9.0 instance must be deployed early since VCF 9.0 requires NSX 9.0 as a foundational component. Existing Aria Operations must be manually upgraded to VCF Operations 9.0 to meet compatibility and prerequisite requirements before VCF Automation can be upgraded or integrated.

### NEW QUESTION # 39

.....

TrainingDumps is a leading platform that has been helping the 2V0-17.25 exam candidates for many years. Over this long time period, countless 2V0-17.25 exam candidates have passed their dream VMware Cloud Foundation 9.0 Administrator certification and they all got help from valid, updated, and Real 2V0-17.25 Exam Questions. So you can also trust the top standard of TrainingDumps 2V0-17.25 exam dumps and start 2V0-17.25 practice questions preparation without wasting further time.
