

Customizable Managing-Cloud-Security Exam Mode & Managing-Cloud-Security Reliable Test Review

Managing Cloud Security - C838 Exam with Complete Answers

Broad network access - Answer-There should never be network bandwidth bottlenecks.

On-demand services - Answer-Refers to the model that allows customers to scale their compute and/or storage needs with little or no intervention from or prior communication with the provider.

Resource pooling - Answer-Characteristic that allows the cloud provider to meet various demands from customers while remaining financially viable.

measured/metered service - Answer-The customer is charged for only what they use and nothing more.

Business Impact Analysis (BIA) - Answer-An assessment of the priorities given to each asset and process within the organization

personally identifiable information (PII) - Answer-Under current laws, no cloud customer can transfer risk or liability associated with the inadvertent or malicious disclosure of <blank>.

Elasticity - Answer-This is the flexibility of allocating resources as needed for immediate usage, instead of purchasing resources according to other variables.

Simplicity - Answer-Usage and administration of cloud services ought to be transparent to cloud customers and users; from their perspective, a digital data service is paid for and can be used, with very little additional input other than what is necessary to perform their duties.

Scalability - Answer-The organization's computing needs won't remain static; there will be new (and hopefully more) users, customers, and data as the organization continually matures.

Infrastructure as a Service (IaaS) - Answer-The most basic of cloud service offerings, <blank> allows the customer to install all software, including operating systems (OSs) on hardware housed and connected by the cloud vendor.

Platform as a Service (PaaS) - Answer-<Blank> contains everything included in IaaS, with the addition of OSs.

Software as a Service (SaaS) - Answer-The cloud vendor becomes responsible for administering, patching, and updating software as well.

As the old saying goes people change with the times. People must constantly update their stocks of knowledge and improve their practical ability. Passing the test Managing-Cloud-Security certification can help you achieve that and buying our Managing-Cloud-Security test practice materials can help you pass the Managing-Cloud-Security test smoothly. Our Managing-Cloud-Security study question is superior to other same kinds of study materials in many aspects. Our Managing-Cloud-Security test bank covers the entire syllabus of the test and all the possible questions which may appear in the test. You will pass the Managing-Cloud-Security exam for sure.

Dumpkiller has hired professionals to supervise the quality of the Managing-Cloud-Security PDF prep material. Laptops, tablets, and smartphones support the WGU Managing-Cloud-Security test questions PDF file. If any taker of the WGU Managing-Cloud-Security test prepares thoroughly with our exam product he will crack the exam of the credential on the first attempt.

Managing-Cloud-Security Reliable Test Review & Managing-Cloud-Security Valid Test Tips

The WGU Managing Cloud Security (JY02) practice exam material is available in three different formats i.e WGU Managing-Cloud-Security dumps PDF format, web-based practice test software, and desktop Managing-Cloud-Security practice exam software. PDF format is pretty much easy to use for the ones who always have their smart devices and love to prepare for Managing-Cloud-Security Exam from them. Applicants can also make notes of printed WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam material so they can use it anywhere in order to pass WGU Managing-Cloud-Security Certification with a good score.

WGU Managing Cloud Security (JY02) Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which jurisdictional protection factor should be known if personally identifiable information (PII) is to be stored in the cloud?

- A. Jurisdictional location of availability zone
- B. Physical location of load balancer
- **C. Jurisdictional location of data**
- D. Physical location of the web application firewall (WAF)

Answer: C

Explanation:

When storing personally identifiable information (PII) in the cloud, the jurisdictional location of the data must be clearly understood. Managing Cloud principles emphasize that data is subject to the laws and regulations of the country or region where it is physically stored.

Different jurisdictions impose varying requirements for data protection, privacy, access, and disclosure.

Knowing where data resides allows organizations to assess legal obligations, compliance requirements, and potential risks associated with government access or cross-border data transfers.

The physical location of infrastructure components such as firewalls or load balancers does not determine legal jurisdiction over stored data. Availability zones may exist within a region but do not define jurisdiction independently. Therefore, the jurisdictional location of the data itself is the critical factor.

NEW QUESTION # 56

Which risk mitigation technique will compensate a cloud service customer for failures on the part of the cloud service provider?

- A. Suspension of service clause
- B. Recovery time objective
- C. Data protection requirements
- **D. SLA penalties**

Answer: D

Explanation:

Service level agreement (SLA) penalties are a risk mitigation technique that compensates customers for failures by the cloud service provider. Managing Cloud principles explain that SLAs define performance commitments such as availability, response time, and reliability.

When a provider fails to meet these commitments, SLA penalties-often in the form of service credits or financial compensation-are applied. While penalties do not prevent failures, they provide accountability and partial financial remediation.

Recovery time objectives define recovery goals, data protection requirements address security controls, and suspension clauses govern service termination. None of these compensate customers directly. Therefore, SLA penalties are the correct mitigation technique.

NEW QUESTION # 57

Which general body of law covers data breach violations in a cloud environment at a federal agency?

- A. Criminal
- **B. Administrative**
- C. Civil
- D. Tort

Answer: B

Explanation:

Administrative law governs data breach violations involving federal agencies in cloud environments.

Managing Cloud principles explain that administrative law regulates the activities of government agencies and defines compliance obligations, enforcement actions, and penalties.

When a federal agency experiences a data breach, violations are typically addressed through administrative processes rather than criminal or civil courts. Oversight bodies evaluate compliance with federal regulations, policies, and standards, and corrective actions may be mandated.

Criminal law addresses offenses against the state, civil law governs disputes between parties, and tort law covers personal injury claims. Therefore, administrative law is the correct body of law for federal agency data breaches.

NEW QUESTION # 58

Which option should a cloud architect recommend to an organization looking to simplify development and management of applications?

- A. Infrastructure as a Service (IaaS)
- B. Desktop as a Service (DaaS)
- C. Software as a Service (SaaS)
- **D. Platform as a Service (PaaS)**

Answer: D

Explanation:

Platform as a Service (PaaS) is the recommended option for organizations seeking to simplify application development and management. Managing Cloud guidance explains that PaaS provides a complete development environment, including operating systems, runtime environments, middleware, databases, and development tools.

By abstracting infrastructure and platform management, PaaS allows developers to focus exclusively on building, testing, and deploying applications. Tasks such as patching, scaling, load balancing, and environment configuration are handled by the cloud provider, reducing complexity and administrative effort.

DaaS focuses on delivering virtual desktops, IaaS requires customers to manage operating systems and applications, and SaaS provides fully developed applications rather than development platforms. Therefore, PaaS best meets the requirement of simplifying development and management.

NEW QUESTION # 59

An organization is reviewing a contract from a cloud service provider and wants to ensure that all aspects of the contract are adhered to by the cloud service provider. Which control will allow the organization to verify that the cloud provider is meeting its obligations?

- A. Confidential computing
- B. Regulatory oversight
- C. Incident management
- **D. Continuous monitoring**

Answer: D

Explanation:

Continuous monitoring is the control that allows organizations to actively verify that a cloud provider is fulfilling contractual and compliance obligations. This involves automated collection and analysis of operational, security, and performance data. It enables organizations to ensure that service-level agreements (SLAs) are being honored and that compliance requirements are being met in real time.

While regulatory oversight is provided by external authorities and incident management is reactive in nature, continuous monitoring is a proactive approach. It allows customers to maintain visibility into provider operations. Confidential computing focuses on data protection but does not verify contract adherence.

By employing continuous monitoring, organizations establish transparency and accountability. It also supports audit processes by providing evidence that controls remain effective over time. This reduces risk associated with outsourcing critical functions to a cloud provider and ensures resilience against potential provider-side failures.

NEW QUESTION # 60

.....

The price of WGU Managing-Cloud-Security updated exam dumps is affordable. You can try the free demo version of any WGU Managing-Cloud-Security exam dumps format before buying. For your satisfaction, Dumpkiller gives you a free demo download facility. You can test the features and then place an order. So, these real and updated WGU Managing Cloud Security (JY02) Managing-Cloud-Security Dumps are essential to pass the Managing-Cloud-Security exam.

Managing-Cloud-Security Reliable Test Review: https://www.dumpkiller.com/Managing-Cloud-Security_braindumps.html

WGU Customizable Managing-Cloud-Security Exam Mode They guarantee your success with an offer of taking back the money you paid, if by hard luck you fail the exam, It is wise to have right things for your study to have max If you need great and effective support in the Managing-Cloud-Security cbt then choose BrainDump Managing-Cloud-Security audio lectures and Braindump WGU Managing-Cloud-Security WGU Managing Cloud Security (JY02), WGU Customizable Managing-Cloud-Security Exam Mode We will immediately refund if the buyer provide failure test proof just like failure score scan or screenshots.

ActionScript for Multiplayer Games and Virtual Worlds ActionScript for Multiplayer Games and Virtual Worlds, with a bio longer than I could read to you today, They guarantee your success Customizable Managing-Cloud-Security Exam Mode with an offer of taking back the money you paid, if by hard luck you fail the exam.

Customizable Managing-Cloud-Security Exam Mode - Free PDF Quiz WGU Managing-Cloud-Security First-grade Reliable Test Review

It is wise to have right things for your study to have max If you need great and effective support in the Managing-Cloud-Security cbt then choose BrainDump Managing-Cloud-Security audio lectures and Braindump WGU Managing-Cloud-Security WGU Managing Cloud Security (JY02).

We will immediately refund if the buyer provide failure test proof Managing-Cloud-Security just like failure score scan or screenshots, To some extent, exam is kind of an annoyance for its complexity and preparation.

Do not need to pay for the whole product before you try the free trial version.
