Good opportunities are always for those who prepare themselves well. You should update yourself when you are still young. Our NCLEX-RN study materials might be a good choice for you. The contents of our NCLEX-RN learning braindumps are the most suitable for busy people. And we are professional in this field for over ten years. Our NCLEX-RN Exam Questions are carefully compiled by the veteran experts who know every detail of the content as well as the displays. Just have a try and you will love them!

NCLEX-RN exam consists of four categories: safe and effective care environment, health promotion and maintenance, psychosocial integrity, and physiological integrity. These categories are broken down into subcategories that cover a range of topics related to nursing practice, including patient care, pharmacology, health assessment, and nursing ethics. NCLEX-RN Exam is computerized and adaptive, meaning that the difficulty of the questions will vary depending on the test-taker's performance. Passing the NCLEX-RN exam is a crucial step for individuals looking to become registered nurses and enter the workforce.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q344-Q349):

NEW QUESTION # 344

A client presents to the emergency room with cyanosis, coughing, tachypnea, and tachycardia. She has a history of asthma. Arterial blood gas values are pH 7.28, PaO2 54, PaCO2 60, and HCO3 24. The nursing assessment of arterial blood gases indicate the

presence of:

- A. Respiratory alkalosis
- B. Metabolic alkalosis
- C. Metabolic acidosis
- **D. Respiratory acidosis**

Answer: D

Explanation:

Section: Questions Set D

Explanation:

(A) Respiratory alkalosis is determined by elevated pH and low PaCO₂. (B) Respiratory acidosis is determined by low pH and elevated PaCO₂. (C) Metabolic alkalosis is determined by elevated pH and HCO₃. (D) Metabolic acidosis is determined by low pH and HCO₃.

NEW QUESTION # 345

A client was admitted to the hospital after falling in her home. At the time of admission, her blood alcohol level was 0.27 mg%. Her family indicates that she has been drinking a fifth of vodka a day for the past 9 months. She had her last drink 30 minutes prior to admission. Alcohol withdrawal symptoms would most likely be exhibited by her:

- A. Two to 4 hours after the last drink
- **B. Six to 8 hours after the last drink**
- C. Immediately on admission
- D. Twenty-four hours after the last drink

Answer: B

Explanation:

Explanation/Reference:

Explanation:

(A) This answer is incorrect. Alcohol withdrawal usually begins approximately 6-8 hours after the last drink. (B) This answer is correct. It takes approximately 6-8 hours for metabolism of alcohol. (C) This answer is incorrect. The alcohol is still in the system, as indicated by the high blood alcohol level. (D) This answer is incorrect. Symptoms of alcohol withdrawal usually begin within 6-8 hours of the last drink.

NEW QUESTION # 346

The mother of a 7-year-old mental health center client reports that the client has refused to attend gymnastics for the past 2 weeks. Prior to that time, the child liked going to this class and was attending 3 times a week. In talking with the client, the nurse would:

- A. Ask her why she doesn't like gymnastics anymore
- **B. Ask her to describe how things were at gymnastics before she started refusing to go**
- C. Reassure her that things will get better once she begins the classes again
- D. Tell her that it is OK to be afraid of this activity

Answer: B

Explanation:

Explanation

(A) The child has not said that she dislikes gymnastics. (B) The nurse will be able to obtain information on what events occurred at gymnastics prior to her refusal to attend. The nurse will also gain information about the child's perception of the problem. (C) The child has not said she is afraid to go to gymnastics. (D) False reassurance is inappropriate.

NEW QUESTION # 347

When a client is receiving vasoactive therapy IV, such as dopamine (Intropin), and extravasation occurs, the nurse should be prepared to administer which of the following medications directly into the site?

- **A. Phentolamine (Regitine)**

- B. Sodium bicarbonate
- C. Epinephrine
- D. Phenylephrine (Neo-Synephrine)

Answer: A

Explanation:

Explanation

(A) Phentolamine is given to counteract the-adrenergic effects that cause ischemia and necrosis of local tissue.

(B) Epinephrine is an endogenous catecholamine that produces vasoconstriction and increases heart rate and contractility. (C)

Phenylephrine causes constriction of arterioles of skin, mucous membranes, and viscera, which in turn can cause ischemia and necrosis. (D) Sodium bicarbonate is an alkalinizing agent that is incompatible with dopamine.

NEW QUESTION # 348

A client is scheduled for a magnetic resonance imaging (MRI) to locate a cerebral lesion. It is important for the nurse to find out if he has a(n):

- A. Allergy to seafood
- B. History of seizures
- C. Movable metal implant
- D. Pin or screw in any bone

Answer: C

Explanation:

Section: Questions Set G

Explanation:

(A) Iodine is not used as a contrast medium for MRI. It is important to inquire about allergy to seafood if the client is to have an arteriogram or enhanced computer tomography. (B) MRI is safe if seizures are under control. It is more important to inquire about movable metal implants. (C) Clients with movable metal implants such as shrapnel or aneurysm clips or clients with permanent pacemakers or implanted pumps can be traumatized during an MRI. (D) Nonmovable metal prostheses or hardware will not cause trauma during an MRI.

NEW QUESTION # 349

.....

Our experts have devised a set of exam like NCLEX-RN practice tests for the candidates who want to ensure the highest percentage in real exam.
