最新的 Adobe Journey Optimizer AD0-E607 免費考試真題 (Q59-Q64):

問題 #59

A campaign manager responsible for a live "Welcome Series" journey discovers a mistake in the configuration. They need to correct it immediately. They create a new version of the journey to make the edits.

After they publish the new, corrected version, what happens to the customer profiles that were already in the middle of the old, incorrect version?

- A. All profiles from the old version are immediately moved to the corresponding activity in the new version.
- B. The system pauses all profiles in the old version and waits for manual intervention to migrate them.
- C. Profiles continue their path in the old version until they exit, and only new profiles will enter the new version.
- D. Only profiles that were in a 'Wait' activity in the old version are moved to the new version.

答案： C

問題 #60

A data analyst is troubleshooting a journey where profiles are successfully entering from a "SignUp" event, but no emails are being sent. The journey log shows that every profile flows directly to the "timeout or error" path of the Email activity. The email surface is valid, and the test profiles have email addresses.

Upon inspecting the "SignUp" event payload being sent to the platform, what is a likely cause of this error?

- A. The event payload is missing the `testProfile` flag.
- B. The event is being sent via batch ingestion instead of streaming.
- C. The event's primary identity is an ECID, but no email address is included anywhere in the event payload.
- D. The event payload includes personalization attributes (e.g., `firstName`) that are empty or null.

答案： D

問題 #61

A data analyst has scheduled a CSV file to be ingested into an Adobe Experience Platform dataset. The next day, they notice that the data has not appeared in the profiles as expected.

What is the first place the analyst should look to diagnose the problem?

- A. The schema configuration to see if it was changed.
- B. The Data Ingestion monitoring section in the AEP UI, checking for failed batches.
- C. The journey reporting interface.
- D. The suppression list to see if the data was excluded.

答案： B

問題 #62

An e-commerce manager for an airline is designing the post-booking communication journey. The journey is triggered by a "FlightBooked" business event. The manager needs to send a confirmation email immediately, and then a "Prepare for your trip" email exactly 72 hours before the flight's departure time, which is included in the "FlightBooked" event payload.

Which combination of activities should be used after the initial event trigger?

- A. A 'Condition' activity to check the departure time, followed by two 'Email' activities.
- B. An immediate 'Email' activity, followed by a 'Wait' activity configured to wait until the specific date and time calculated from the event's departure time.
- C. An immediate 'Email' activity, followed by a 'Wait' activity set to 72 hours.
- D. Two 'Email' activities, with the second one having a scheduled send time.

答案： B

問題 #63

An email developer is building a data-driven email that must render a list of recommended products for a customer. The product data (name, image URL, price) is available as a `listString` (an array of objects) on the customer's profile. When the developer tries to use the simple personalization picker to insert the product name, the field is disabled. Why is this happening and what must be done?

- A. The field is disabled because lists cannot be used for personalization. The data must be flattened into separate attributes first.
- **B. The field is disabled because `listString` fields can only be used in the advanced expression editor and require a "for each" loop to iterate through the items.**
- C. The field is disabled because the email template does not support list rendering.
- D. The field is disabled because the developer does not have the correct permissions to use list-type fields.

答案： B
