Pass4Test 의 학습가이드에는Juniper JN0-281인증 시험의 예상문제, 시험문제와 답입니다. 그리고 중요한 건 시험과 매우 유사한 시험문제와 답도 제공해드립니다. Pass4Test 을 선택하면 Pass4Test 는 여러분을 빠른시일내에 시험관련지식을 터득하게 할 것이고Juniper JN0-281인증시험도 고득점으로 패스하게 해드릴 것입니다.

Juniper JN0-281 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • High Availability: This section of the exam measures the skills of a Data Center Reliability Engineer and covers strategies to ensure continuous network availability. It includes features like Link Aggregation Groups (LAG), Graceful Restart (GR), Bidirectional Forwarding Detection (BFD), and Virtual Chassis. It also provides a basic understanding of how to configure, monitor, and troubleshoot each of these high-availability components to maintain resilient network performance.
주제 2	<ul style="list-style-type: none"> • Data Center Architectures: This section of the exam measures the skills of a Data Center Architect and covers foundational knowledge about various data center designs. It includes traditional multitier architectures as well as more modern IP fabric architectures using spine-leaf topologies. The section also touches on Layer 2 and Layer 3 strategies for forwarding traffic, the differences between overlay and underlay networks, and introduces Ethernet VPN–Virtual Extensible LAN (EVPN–VXLAN), explaining its basic purpose and role in data center environments.
주제 3	<ul style="list-style-type: none"> • Layer 2 Switching and VLANs: This section of the exam measures the skills of a Network Support Engineer and covers the essential concepts of Layer 2 switching operations within Junos OS. It includes an overview of Ethernet switching and bridging, providing an understanding of how Layer 2 networks function. The section also introduces VLAN concepts, focusing on port modes, VLAN tagging methods, and the purpose of Integrated Routing and Bridging (IRB). It further explores the practical side by addressing how to configure, monitor, and troubleshoot both Layer 2 switching and VLANs.
주제 4	<ul style="list-style-type: none"> • Protocol-Independent Routing: This section of the exam measures the skills of a Routing Engineer and covers routing features that function independently of any specific protocol. It includes static, aggregate, and generated routes, along with the concept of martian addresses. Routing instances and Routing Information Base (RIB) groups are introduced, as well as techniques like load balancing and filter-based forwarding. Configuration, monitoring, and troubleshooting aspects of these routing components are also covered in this section.

주제 5	<ul style="list-style-type: none"> • Data Center Routing Protocols BGP • OSPF: This section of the exam measures skills of a Network Operations Specialist and covers the operation and key concepts of the OSPF protocol. It explains elements such as the link-state database, OSPF packet types, and router IDs, including how adjacencies and designated routers work within areas. The section then transitions to BGP, outlining its basic operations, message types, attributes, and the path selection process. It also discusses both IBGP and EBGP roles. Lastly, the section reviews how to configure, monitor, and troubleshoot OSPF and BGP using routing policies and various tools.

시험패스 가능한 JN0-281최신덤프 최신 덤프모음집

근 몇년간 IT산업이 전례없이 신속히 발전하여 IT업계에 종사하는 분들이 여느때보다 많습니다. 경쟁이 이와같이 치열한 환경속에서 누구도 대체할수 없는 자기만의 자리를 찾으려면 IT인증자격증취득은 무조건 해야 하는것이 아닌가 싶습니다. Juniper인증 JN0-281시험은 IT인증시험중 가장 인기있는 시험입니다. Pass4Test에서는 여러분이 Juniper인증 JN0-281시험을 한방에 패스하도록 실제시험문제에 대비한 Juniper인증 JN0-281덤프를 발췌하여 저렴한 가격에 제공해드립니다. 시험패스 못할시 덤프비용은 환불처리 해드리기에 고객님의 아무런 페를 끼치지 않을것입니다.

최신 JNCIA-DC JN0-281 무료샘플문제 (Q195-Q200):

질문 # 195

Referring to the exhibit, which two statements are true? (Choose two.)

- A. The BGP group is configured to attempt an EBGP peering session with 192.168.100.1.
- B. The BGP group is configured to attempt an EBGP peering session with 192.168.100.2.
- C. The configuration will not pass the commit check.
- D. The configuration will pass the commit check.

정답: B,C

질문 # 196

How can OSPF be configured to prefer one route over another?

- A. By setting a lower cost on the preferred route.
- B. By configuring route redistribution.
- C. By setting a higher cost on the preferred route.
- D. By adjusting interface bandwidth.

정답: A

질문 # 197

Which two statements are correct about aggregate routes and generated routes? (Choose two.)

- A. A generated route has a forwarding next hop.
- B. A generated route does not have a forwarding next hop.
- C. An aggregate route does not have a forwarding next hop.
- D. An aggregate route has a forwarding next hop.

정답: A,C

설명:

Aggregate routes and generated routes are used to create summarized routes in Junos, but they behave differently in terms of forwarding.

Step-by-Step Breakdown:

Aggregate Routes:

An aggregate route summarizes a set of more specific routes, but it does not have a direct forwarding next hop. Instead, it points to the more specific routes for actual packet forwarding.

Generated Routes:

A generated route also summarizes specific routes, but it has a forwarding next hop that is determined based on the availability of contributing routes. The generated route can be used to directly forward traffic.

Juniper Reference:

Aggregate and Generated Routes: In Junos, aggregate routes rely on more specific routes for forwarding, while generated routes can forward traffic directly based on their next-hop information.

질문 # 198

What is the purpose of using route reflectors in BGP?

- A. To increase the speed of BGP convergence
- B. To automatically select the best route
- C. To reduce the number of required IBGP sessions in a network
- D. To encrypt BGP messages

정답: C

질문 # 199

When configuring High Availability components, which of the following practices are recommended? (Choose two)

- A. Implement regular testing of failover mechanisms.
- B. Use a single path for data and control traffic.
- C. Regularly update firmware to non-recommended versions.
- D. Ensure physical redundancy of critical components.

정답: A,D
