The three actions that are consistent with creating a form that allows users to input data are:

Set the consolidation member on the form to FCCS Entity Input. This is the member that represents the input data for each entity before consolidation.

Select level 0 dimension members for POV, rows, and columns. This ensures that the form displays the lowest level of detail for each dimension.

Grant the data input users Write access to the dimension members used on the form. This allows them to enter or modify data on the form.

The other options are not consistent with creating a form that allows users to input data. In the member selection for Entity, you can include shared entities if you want to allow data input for multiple instances of an entity. Setting the currency on the form to Parent Currency would display the data in the parent entity's currency, not the input currency.
