## Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q32-Q37):

### NEW QUESTION # 32

An organization decided to decommission a deployed FortiWeb instance on Google Cloud.  
What is the most efficient way to delete the FortiWeb instance and all of its dependent resources?

- A. Visit Google Cloud Marketplace and unsubscribe from FortiWeb pay-as-you-go.
- B. Use Google Cloud Solutions to delete the FortiWeb deployment.
- C. Delete the FortiWeb instance manually in the Compute Engine portal.
- D. Use Google Cloud Deployment Manager to delete the FortiWeb deployment.

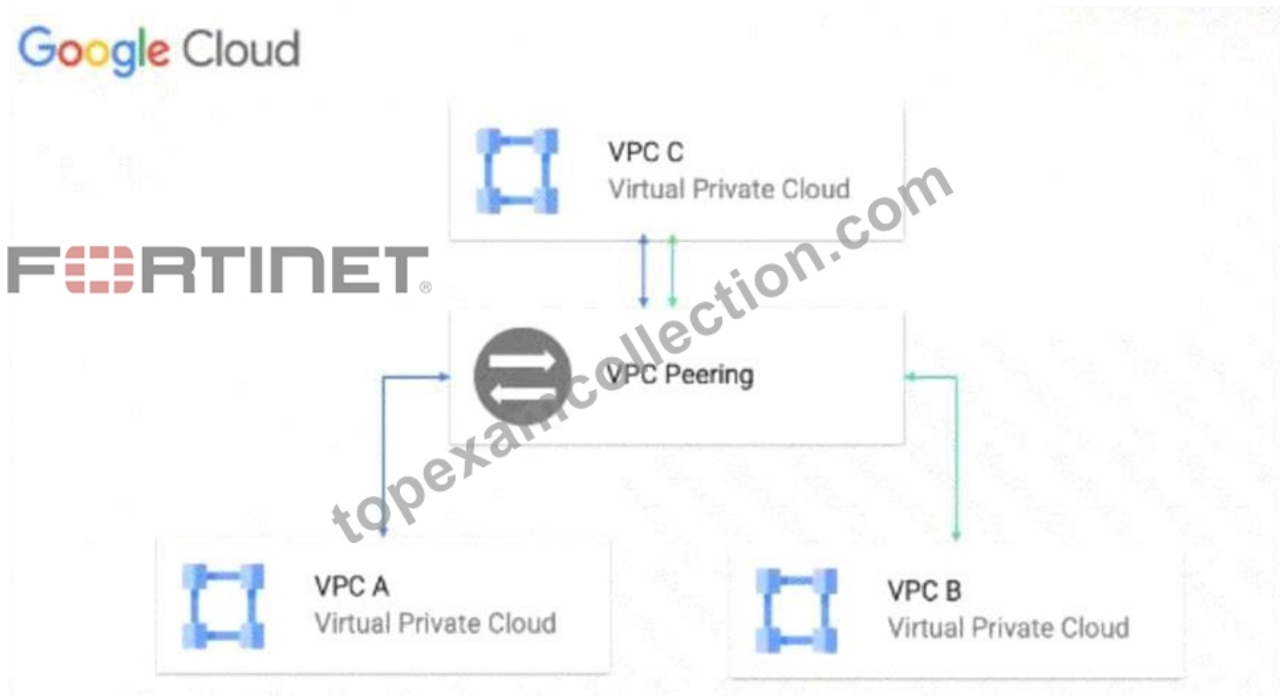

**Answer: D**

Explanation:

Google Cloud Deployment Manager manages the lifecycle of deployments and their dependent resources, enabling efficient and clean deletion of FortiWeb instances and all associated resources in one operation.

**NEW QUESTION # 33**

Refer to the exhibit.

Which action must the administrator take to route traffic from VPC B to VPC A?

- A. The administrator must configure a custom route in VPC B and point the gateway to the VPC peering service.
- B. The administrator must create a new VPC peering connection between VPC A and VPC B.
- C. The administrator must configure a custom route in VPC B and point the gateway to VPC A.
- **D. The administrator must deploy a FortiGate VM with at least three network interfaces.**

**Answer: D**

Explanation:

Because VPC peering is non-transitive, traffic cannot route from VPC B to VPC A via VPC C. To enable routing between VPC A and VPC B through VPC C, a FortiGate VM with multiple network interfaces can act as a firewall/router to manage traffic between the three VPCs.

**NEW QUESTION # 34**

Your organization has decided to deploy a high-availability (HA) cluster. One key requirement of the deployment is to support configuration synchronization.

Which three deployment types should be considered? (Choose three.)

- **A. Active-passive HA using passthrough load balancers**
- B. Active-active HA using auto scaling
- **C. Active-passive HA using FGSP**
- **D. Active-passive HA using software-defined networking (SDN)**

**Answer: A,C,D**

Explanation:

These three deployment types support configuration synchronization between HA cluster members, which is critical for maintaining

consistent state and seamless failover.

### NEW QUESTION # 35

Refer to the exhibit.

An organization has four virtual private cloud networks and deployed a FortiGate to protect the VPCs. FortiGate is configured with four network interfaces and each network interface is assigned one of the four VPCs. The organization is expanding and plans to add two more VPCs. Which two options can the organization use to support the two new VPCs? (Choose two.)

- A. Modifying the FortiGate configuration to add two more network interfaces
- B. Adding a second FortiGate and configuring both FortiGate devices as an active-active high-availability cluster.
- C. Utilizing VPC peering
- D. Deleting FortiGate and replacing it with a Google Cloud machine type that supports six network interfaces

**Answer: B,C**

Explanation:

VPC peering allows connectivity between multiple VPCs without needing additional interfaces on FortiGate, enabling the existing FortiGate to protect multiple VPCs beyond its physical interface limits.

Adding a second FortiGate and configuring active-active HA enables scaling network protection for more VPCs by distributing traffic across multiple FortiGate instances, overcoming the network interface limit per VM.

### NEW QUESTION # 36

Which architecture inspection type in Google Cloud is most closely associated with Google Cloud Interconnect?

- A. Inbound north-south traffic inspection
- B. Outbound north-south traffic inspection
- C. Hybrid cloud inspection
- D. East-west traffic inspection

**Answer: C**

Explanation:

Google Cloud Interconnect connects on-premises networks with Google Cloud, enabling hybrid cloud environments. Inspection related to this connectivity focuses on hybrid cloud traffic flows.
