Only when you choose our GH-100 Guide Torrent will you find it easier to pass this significant examination and have a sense of brand new experience of preparing the GH-100 exam.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.
Topic 2	<ul style="list-style-type: none">Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CICD pipelines.

Topic 3	<ul style="list-style-type: none"> • Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
Topic 4	<ul style="list-style-type: none"> • Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.

Microsoft GitHub Administration Sample Questions (Q30-Q35):

NEW QUESTION # 30

You need to contact GitHub Premium Support. What are valid reasons for submitting a support ticket? (Each answer presents a complete solution. Choose two.)

- A. hardware setup issues or errors
- **B. business impact from security issues within your organization**
- C. license renewal
- **D. outages on GitHub.com affecting core Git functionality**

Answer: B,D

Explanation:

Business-impact security issues (for example, a critical vulnerability affecting your organization) are classified as High-priority tickets and are covered under your Premium Support SLA.

Outages on GitHub.com that disrupt core Git or web application functionality trigger Urgent-priority responses under Premium Support's SLA.

NEW QUESTION # 31

You are using GitHub-hosted runners and need to securely deploy to an internal system. The security team requires that these runners use IP address ranges that would not be shared with other companies. Which of the following approaches would meet their requirements?

- A. GitHub-hosted larger runners with Azure private networking
- **B. GitHub-hosted larger runners with static IP addresses**
- C. GitHub-hosted standard runners, using the IP addresses provided in "api" from <https://api.github.com/meta>
- D. GitHub-hosted standard runners, using the IP addresses provided in "actions" from <https://api.github.com/meta>

Answer: B

Explanation:

GitHub's larger runners let you reserve dedicated static IP addresses for your workflows - so you can allow-list those IPs in your firewall and be sure they aren't shared with any other tenant.

NEW QUESTION # 32

You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- A. Rewrite the repository history using `git filter-repo` or BFG Repo-Cleaner to remove the secret from all commits.
- B. Delete the repository and create a new one to ensure the secret is no longer accessible.
- **C. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.**
- D. Contact GitHub Support to remove the secret from all forks and clones of the repository.

Answer: C

Explanation:

The immediate priority is to revoke or rotate the exposed credential so it can no longer be used; once it's invalidated, you can safely proceed with history-rewriting or other cleanup steps.

NEW QUESTION # 33

What do you need to successfully generate a support bundle on a GitHub Enterprise Server?

- A. Administrator SSH access to the appliance
- B. Approval from GitHub Support
- C. A custom GitHub Action in the root repo
- D. A GitHub App with read:org permissions

Answer: A

Explanation:

You must have administrator-level SSH access to the GitHub Enterprise Server appliance so you can run the ghe-support-bundle command over SSH and capture the bundle locally.

NEW QUESTION # 34

Which events from the audit log are exposed by the GraphQL API? Each answer presents a complete solution. (Choose three.)

- A. cloning of repositories
- B. promoting users to administrators
- C. pushes to repositories
- D. changes in permissions
- E. changes to permissions of a GitHub App

Answer: B,D,E

Explanation:

The GraphQL Audit Log API surfaces entries whenever repository or organization permissions are changed ("Changes permissions").

It records when users are elevated to administrative roles ("Promotes users to admin").

It logs alterations to a GitHub App's granted permissions ("Changes permissions of a GitHub App").

NEW QUESTION # 35

.....
