Have you ever noticed that people who prepare themselves for Google Cloud-Digital-Leader certification exam do not need to negotiate their salaries for a higher level, they just get it after they are Google Cloud-Digital-Leader Certified? The reason behind this fact is that they are considered the most deserving candidates for that particular job.

Google Cloud Digital Leader Sample Questions (Q61-Q66):

NEW QUESTION # 61

What is a benefit of the OpEx model for cloud security?

- A. The cloud provider guarantees security.
- B. Organizations can deploy custom security hardware.
- C. Organizations do not need to configure any security settings for cloud resources.
- **D. Organizations do not need to make upfront capital investments in cloud security.**

Answer: D

Explanation:

The correct answer is B. Organizations do not need to make upfront capital investments in cloud security

. Here's why:

* Context of the Question: The question asks about the benefits of the operational expenditure (OpEx) model for cloud security.

* Google Cloud Product Relevance:

* The OpEx model involves paying for cloud resources and services on a pay-as-you-go basis, avoiding the need for large upfront

capital expenditures (CapEx) for security hardware or software.

* In the cloud, security services (such as firewalls, encryption, and monitoring tools) are provided as managed services, which organizations can subscribe to and pay for based on usage. This model allows for more flexibility and scalability in managing security needs and costs.

* Why Not Other Options:

* A. Organizations can deploy custom security hardware: In the cloud, most security needs are met through managed services rather than deploying custom hardware.

* C. Organizations do not need to configure any security settings for cloud resources: This is incorrect, as organizations are responsible for configuring security settings for their applications and data.

* D. The cloud provider guarantees security: The cloud provider guarantees the security of the infrastructure, but the customer is responsible for securing their applications, data, and access controls.

Google Cloud Digital Leader References:

* Refer to Google Cloud's shared responsibility model documentation for more information on OpEx benefits for cloud security.

NEW QUESTION # 62

Which of these are defined by the following statement: a contract you have with your end customers, which, if you don't meet, you might even have to pay fines?

- A. SLI - Service Level Indicator
- **B. SLA - Service Level Agreement**
- C. SLC - Service Level Contract
- D. SLO - Service Level Objective

Answer: B

Explanation:

NEW QUESTION # 63

All Google Cloud Platform services are associated with a project that is used to provide what functions?

- A. Manage Container Deployments
- **B. Enable Services and APIs**
- C. Manage DNS Services
- D. None of the Above

Answer: B

Explanation:

Enable Services and APIs

NEW QUESTION # 64

A customer is migrating their on-premises data analytics solution to Google Cloud. The current solution has a lot of data being read from and written to disk. The performance of this approach has occasionally been a bottleneck for a scale of operations that your customer has. The application is fault tolerant and can withstand machine going down frequently. In moving to Google Cloud they are asking your advice on any way to improve performance?

- A. Use Big Query Which has very fast data access and analysis
- B. Use Persistent Disk with the VMs
- C. Use Cloud Storage which can be central, scalable storage
- **D. Use local SSDs with the VMs**

Answer: D

Explanation:

Local SSDs are attached to the VM and have very high throughput. However, when the VM shuts down, The local SSD is also shut

down, Since our Workload here is fault tolerant, than is not an issue.

NEW QUESTION # 65

You are a program manager for a team of developers who are building an event-driven application to allow users to follow one another's activities in the app. Each time a user adds himself as a follower of another user, a write occurs in the real-time database. The developers will develop a lightweight piece of code that can respond to database writes and generate a notification to let the appropriate users know that they have gained new followers. The code should integrate with other cloud services such as Pub/Sub, Firebase, and Cloud APIs to streamline the orchestration process. The application requires a platform that automatically manages underlying infrastructure and scales to zero when there is no activity.

Which primary compute resource should your developers select, given these requirements?

- A. App Engine flexible environment
- **B. Cloud Functions**
- C. Compute Engine
- D. Google Kubernetes Engine

Answer: B

Explanation:
