Certified Application Developer-ServiceNow certification is highly valued in the IT industry and is recognized by many leading companies worldwide.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q259-Q264):

### NEW QUESTION # 259

Which one of the following is NOT required to link a ServiceNow application to a Git repository?

- A. Password
- B. URL
- C. User name
- **D. Application name**

**Answer: D**

Explanation:

The application name is not required to link a ServiceNow application to a Git repository. You only need to provide the URL, user name, and password of the Git repository, as well as the branch name and the authentication type. The application name is automatically generated based on the scope name of your application. Reference: [Link an application to a Git repository]  
Reference: [https://docs.servicenow.com/bundle/orlando-application-development/page/build/applications/task/t\\_LinkAnApplicationToSourceControl.html](https://docs.servicenow.com/bundle/orlando-application-development/page/build/applications/task/t_LinkAnApplicationToSourceControl.html)

#### **NEW QUESTION # 260**

When debugging Email Notifications, what must you check on a user record?  
Choose 2 answers

- **A. The Email field must have a valid value.**
- **B. Active must be true.**
- C. Delegation must be enabled.
- D. The user must not be locked out.
- E. The First name and Last name fields must have values.

**Answer: A,B**

Explanation:

To receive email notifications, a user must have an active account and a valid email address in the user record. If either of these conditions is not met, the user will not be able to receive any email notifications from the system.

References:

- \* Create an email notification
- \* Example scripting for email notifications

#### **NEW QUESTION # 261**

Where can GlideUser (g\_user) methods be utilized within ServiceNow?

- A. Client Scripts and UI Policies only
- **B. Client Scripts, UI Policies, and UI Actions**
- C. Business Rules, and Script Includes
- D. Business Rules only

**Answer: B**

Explanation:

g\_user is a global object available only in the client-side environment (Client Scripts, UI Policies, UI Actions).

From Development Handbook 4.0.4, p. 204:

"g\_user is only available client-side. It returns session-specific info like roles and user ID. Not usable in Business Rules or Script Includes."

#### **NEW QUESTION # 262**

How can an application link to a repository behind a firewall?

- **A. Link an application to source control through a MID Server.**
- B. Link an application to source control with multi-factor authentication.
- C. This option is not supported.
- D. Link an application to source control through an access token.

**Answer: A**

"Use an existing MID Server to connect to a Source Control repository. Linking or importing an application through a MID Server enables access to repositories behind a firewall." [https://docs.servicenow.com/bundle/tokyo-application-development/page/build/applications/concept/c\\_SourceControlIntegration.html](https://docs.servicenow.com/bundle/tokyo-application-development/page/build/applications/concept/c_SourceControlIntegration.html)

Assume a table called table exists and contains 3 fields: field1, field2, field3. Examine the Access Control list for table: Which field or fields can a user with the itil role read?

- Answer: D**

<https://docs.servicenow.com/bundle/tokyo-platform-security/page/administer/contextual-security/concept/access-control-rules.html>
