NSE7_EFW-7.2 Detail Explanation & NSE7_EFW-7.2 Reliable Test Topics

P.S. Free & New NSE7_EFW-7.2 dumps are available on Google Drive shared by TorrentExam: https://drive.google.com/open?id=1Xu0 pQX6bwDF9hYCVwNChCxlpN6z7QWQ

We don't want you to prepare and practice the old questions and waste time. Therefore, our team of certified experts includes updated Fortinet NSE 7 - Enterprise Firewall 7.2 NSE7_EFW-7.2 Exam Questions as soon as they are released. TorrentExam provides up-to-date Fortinet exam questions.

We provide 3 versions of our NSE7_EFW-7.2 exam questions for the client to choose and free update. Different version boosts different advantage and please read the introduction of each version carefully before your purchase. And the language of our NSE7_EFW-7.2 study materials are easy to be understood and we compile the NSE7_EFW-7.2 Exam Torrent according to the latest development situation in the theory and the practice. You only need little time to prepare for our NSE7_EFW-7.2 exam. So it is worthy for you to buy our NSE7_EFW-7.2 questions torrent.

>> NSE7 EFW-7.2 Detail Explanation <<

NSE7_EFW-7.2 exam collection: Fortinet NSE 7 - Enterprise Firewall 7.2 & NSE7_EFW-7.2 torrent VCE

Our NSE7_EFW-7.2 practice dumps are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These NSE7_EFW-7.2 training materials win honor for our company, and we treat it as our utmost privilege to help you achieve your goal. Meanwhile, you cannot divorce theory from practice, but do not worry about it, we have NSE7_EFW-7.2 stimulation questions for you, and you can both learn and practice at the same time.

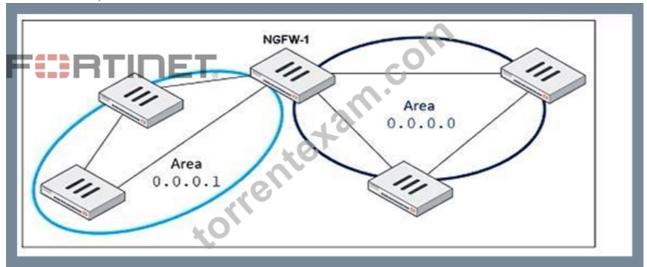

Fortinet NSE7_EFW-7.2 Exam Syllabus Topics:

Topic	Details
Topic 1	Central management: The topic of Central management covers implementing central management.
Topic 2	Routing: It covers implementing OSPF to route enterprise traffic and Border Gateway Protocol (BGP) to route enterprise traffic.
Topic 3	System configuration: This topic discusses Fortinet Security Fabric and hardware acceleration. Furthermore, it delves into configuring various operation modes for an HA cluster.
Topic 4	VPN: Implementing IPsec VPN IKE version 2 is discussed in this topic. Additionally, it delves into implementing auto-discovery VPN (ADVPN) to enable on-demand VPN tunnels between sites.
Topic 5	Security profiles: Using FortiManager as a local FortiGuard server is discussed in this topic. Moreover, it delves into configuring web filtering, application control, and the intrusion prevention system (IPS) in an enterprise network.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q72-Q77):

NEW QUESTION #72

Refer to the exhibit, which shows an OSPF network.

Which types of ink-state advertisements (LSA) will NGFW-1 send, if it is a backup designated router (BDR)?

- A. NGFW-1 will send type 1 and type 3 LSA.
- B. ONGFW-1 will send type 1 and type 2 LSAs.
- C. ONGFW-1 will send type 1 and type 5 LSA.
- D. ONGFW-1 will send type 1 and type 4 LSA.

Answer: A

NEW QUESTION #73

Refer to the exhibit, which contains the partial interface configuration of two FortiGate devices.

```
FortiGate-B (port4) # show
FortiGate-A (port4) # show
config system interface
                                          config system interface
   edit "port4"
                                              edit "port4"
       set vdom "root"
                                                  set vdom "root"
        set ip 10.1.5.1 255.255.255.0
                                                  set ip 10.1.5.2 255.255.255.0
        set allowaccess ping https
                                                  set allowaccess ping https
        set type physical
                                                  set type physical
        set vrrp-virtual-mac enable
                                                               tual-mac enable
                                  ie vam:
        config vrrp
            edit 1
                set vrgrp
                                                           set vrgrp 1
                                                           set vrip 10.1.5.254
                                                           set priority 50
                          t enable
                                                           set preempt enable
                set vrdst 8.8.8.8
                                                           set vrdst 8.8.8.8
                set vrdst-priority 30
                                                           set vrdst-priority 40
            next
                                                      next
        end
                                                  end
        set snmp-index 4
                                                  set snmp-index 4
    next
                                              next
end
                                          end
```

Which two conclusions can you draw from this configuration? (Choose two)

- A. On failover new primary device uses the same MAC address as the old primary
- B. The VRRP domain uses the physical MAC address of the primary FortiGate
- C. By default FortiGate B is the primary virtual router
- D. 10.1.5.254 is the default gateway of the internal network

Answer: A,D

Explanation:

The Virtual Router Redundancy Protocol (VRRP) configuration in the exhibit indicates that

10.1.5.254 is set as the virtual IP (VRIP), commonly serving as the default gateway for the internal network (A). With vrrp-virtual-mac enabled, both FortiGates would use the same virtual MAC address, ensuring a seamless transition during failover (B). The VRRP domain does not use the physical MAC address (C), and the priority settings indicate that FortiGate-A would be the primary router by default due to its higher priority (D).

NEW QUESTION #74

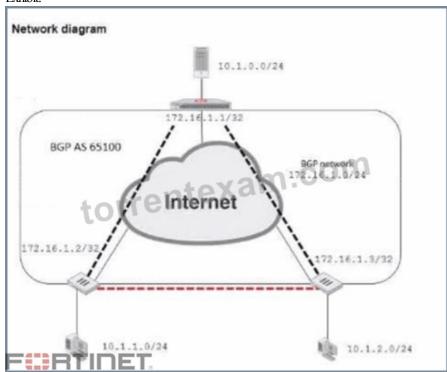

Which two statements about ADVPN are true? (Choose two.)

- A. You must disable add-route in the hub.
- B. The hub adds routes based on IKE negotiations.
- C. You must configure phase 2 quick mode selectors to 0.0.0.0 0.0.0.0.
- D. All FortiGate devices must be in the same autonomous system (AS).

Answer: A,C

NEW QUESTION #75

Exhibit.

Partial BGP configuration

```
Hub # show router bgp
config router bgp
set as 65100
set router-id 172 16.1.1
config neighbor roup
edit "adven"
set emote-as 65100

next end
end
```

Refer to the exhibit, which contains an ADVPN network diagram and a partial BGP con figuration Which two parameters Should you configure in config neighbor range? (Choose two.)

- A. set neighbor-group advpn
- B. set prefix 172.16.1.0 255.255.255.0
- C. set prefix 10.1.0 255.255.254.0
- D. set route reflector-client enable

Answer: A,B

Explanation:

In the ADVPN configuration for BGP, you should specify the prefix that the neighbors can advertise. Option A is correct as you would configure the BGP network prefix that should be advertised to the neighbors, which matches the BGP network in the diagram. Option C is also correct since you should reference the neighbor group configured for the ADVPN setup within the BGP configuration.

NEW QUESTION #76

Exhibit.

```
# get router inio bgs meighbors
VRF 0 neighbor table:
BGP neighbor is 10.2.0.254, remote AS 65100, local AS 65200, external link
BGP version 4, remote router ID 0.0.0.0
BGP state = Idle
Not directly connected EBGP
Last read 00:04:40, hold time is 100 Compalive interval is 60 seconds
Configured hold time is 100 Kacpalive interval is 60 seconds
Received 5 messager 00 notifications, 0 in queue
Sent 4 messages, 1 notifications, 0 in queue
Route refresh request: received 0, sent 0
NLRI treated as withdraw: 0
Minimum time between advertisement runs is 30 seconds...
```

Refer to the exhibit, which provides information on BGP neighbors.

Which can you conclude from this command output?

- A. BGP is attempting to establish a TCP connection with the BGP peer.
- B. The bfd configuration to set to enable.
- C. You must change the AS number to match the remote peer.
- D. The router are in the number to match the remote peer.

Answer: A

Explanation:

The BGP state is "Idle", indicating that BGP is attempting to establish a TCP connection with the peer. This is the first state in the BGP finite state machine, and it means that no TCP connection has been established yet.

If the TCP connection fails, the BGP state will reset to either active or idle, depending on the configuration. References: You can find more information about BGP states and troubleshooting in the following Fortinet Enterprise Firewall 7.2 documents:

- * Troubleshooting BGP
- * How BGP works

NEW QUESTION #77

....

For candidates who are going to buy NSE7_EFW-7.2 training materials online, they may care more about the privacy protection. If you chose us, your personal information, such as your email address and your name will be protected well. Once the order finishes, your personal identification information will be concealed. In addition, NSE7_EFW-7.2 Exam Materials are high-quality, and we have received lots of good feedbacks from our customers. Free demo for NSE7_EFW-7.2 exam dumps are available, we recommend you to have a try before buying, so that you can have a deeper understanding of what you are going to buy.
