Latest Professional-Data-Engineer Study Guide - New Professional-Data-Engineer Exam Preparation

In the modern world, obtaining Professional-Data-Engineer certification is essential. With the growing popularity of Google, the demand for professionals holding this Google Certified Professional Data Engineer Exam (Professional-Data-Engineer) certification holders has increased significantly. Unfortunately, many candidates fail to pass the Professional-Data-Engineer Exam due to outdated Google Certified Professional Data Engineer Exam (Professional-Data-Engineer) exam study material. Such failure can lead to the loss of time, money, and confidence.

Google Certified Professional Data Engineer Exam Sample Questions (Q301-Q306):

NEW QUESTION # 301

You need to choose a database for a new project that has the following requirements:

- * Fully managed
- * Able to automatically scale up
- * Transactionally consistent
- * Able to scale up to 6 TB
- * Able to be queried using SQL

Which database do you choose?

- A. Cloud Bigtable
- B. Cloud Datastore
- **C. Cloud Spanner**
- D. Cloud SQL

Answer: C

Explanation:

<https://cloud.google.com/products/databases>

NEW QUESTION # 302

Your company is selecting a system to centralize data ingestion and delivery. You are considering messaging and data integration systems to address the requirements. The key requirements are:

- * The ability to seek to a particular offset in a topic, possibly back to the start of all data ever captured
- * Support for publish/subscribe semantics on hundreds of topics
- * Retain per-key ordering

Which system should you choose?

- A. Cloud Storage
- **B. Apache Kafka**
- C. Cloud Pub/Sub
- D. Firebase Cloud Messaging

Answer: B

NEW QUESTION # 303

You are a head of BI at a large enterprise company with multiple business units that each have different priorities and budgets. You use on-demand pricing for BigQuery with a quota of 2K concurrent on-demand slots per project. Users at your organization sometimes don't get slots to execute their query and you need to correct this. You'd like to avoid introducing new projects to your account.

What should you do?

- A. Create an additional project to overcome the 2K on-demand per-project quota.
- **B. Switch to flat-rate pricing and establish a hierarchical priority model for your projects.**
- C. Convert your batch BQ queries into interactive BQ queries.
- D. Increase the amount of concurrent slots per project at the Quotas page at the Cloud Console.

Answer: B

Explanation:

Reference <https://cloud.google.com/blog/products/gcp/busting-12-myths-about-bigquery>

NEW QUESTION # 304

When running a pipeline that has a BigQuery source, on your local machine, you continue to get permission denied errors. What could be the reason for that?

- **A. Your gcloud does not have access to the BigQuery resources**
- B. BigQuery cannot be accessed from local machines
- C. You are missing gcloud on your machine

- D. Pipelines cannot be run locally

Answer: A

Explanation:

When reading from a Dataflow source or writing to a Dataflow sink using DirectPipelineRunner, the Cloud Platform account that you configured with the gcloud executable will need access to the corresponding source/sink Reference:

<https://cloud.google.com/dataflow/java-sdk/JavaDoc/com/google/cloud/dataflow/sdk/runners/DirectPipelineRunner>

NEW QUESTION # 305

You want to build a managed Hadoop system as your data lake. The data transformation process is composed of a series of Hadoop jobs executed in sequence. To accomplish the design of separating storage from compute, you decided to use the Cloud Storage connector to store all input data, output data, and intermediary data. However, you noticed that one Hadoop job runs very slowly with Cloud Dataproc, when compared with the on-premises bare-metal Hadoop environment (8-core nodes with 100-GB RAM).

Analysis shows that this particular Hadoop job is disk I/O intensive. You want to resolve the issue. What should you do?

- **A. Allocate sufficient persistent disk space to the Hadoop cluster, and store the intermediate data of that particular Hadoop job on native HDFS**
- B. Allocate sufficient memory to the Hadoop cluster, so that the intermediary data of that particular Hadoop job can be held in memory
- C. Allocate additional network interface card (NIC), and configure link aggregation in the operating system to use the combined throughput when working with Cloud Storage
- D. Allocate more CPU cores of the virtual machine instances of the Hadoop cluster so that the networking bandwidth for each instance can scale up

Answer: A

Explanation:

Its google recommended approach to use LocalDisk/HDFS to store Intermediate result and use Cloud Storage for initial and final results.

NEW QUESTION # 306

.....

As the famous brand ExamTorrent, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our Professional-Data-Engineer exam torrent. Most important of all, as long as we have compiled a new version of the Professional-Data-Engineer guide torrent, we will send the latest version of our Professional-Data-Engineer Training Materials to our customers for free during the whole year after purchasing. We will continue to bring you integrated Professional-Data-Engineer guide torrent to the demanding of the ever-renewing exam, which will help you pass the Professional-Data-Engineer exam.
