最新的 A+ 220-1202 免費考試真題 (Q30-Q35):

問題 #30

A systems administrator logs in to a developer's machine to update the system and notices a performance issue. To troubleshoot the issue, the administrator attempts to open Task Manager multiple times, but it does not open. Which of the following is most likely the cause of this issue?

- A. The operating system has a malware infection
- B. Windows Update Service is set to manual
- C. A software development application is running
- D. A page file was moved to D:\ drive

答案: A

解題說明:

Malware commonly disables system utilities such as Task Manager to prevent detection and termination of malicious processes, which explains why Task Manager fails to open despite multiple attempts.

問題 #31

A technician is installing a cloud-based productivity suite and gets an error saying the installation is unavailable. What should be tried first?

- A. Update the device OS
- B. Check the license device limit
- C. Reinstall the productivity suite
- D. Download an open-source alternative

答案: B

解題說明:

Cloud-based software often enforces device limits per license. Before reinstallation or switching software, checking license allocations is the most logical first step.

問題 #32

A small office reported a phishing attack that resulted in a malware infection. A technician is investigating the incident and has verified the following:

- All endpoints are updated and have the newest EDR signatures.
- Logs confirm that the malware was quarantined by EDR on one system.
- The potentially infected machine was reimaged.

Which of the following actions should the technician take next?

- A. Install network security tools to prevent downloading infected files from the internet.
- B. Suggest alternate preventative controls that would include more advanced security software.
- C. Flash the firmware of the router to ensure the integrity of network traffic.
- D. Discuss the cause of the issue and educate the end user about security hygiene.

答案: D

解題說明:

With technical controls updated, EDR signatures current, and the infected system reimaged, the next step is to address the human factor. Educating the user on how to recognize phishing attempts and follow safe practices helps prevent recurrence and strengthens the organization's overall security posture.

問題 #33

A network technician notices that most of the company's network switches are now end-of-life and need to be upgraded. Which of the following should the technician do first?

- A. Approve the change

- B. Propose the change
- C. Implement the change
- D. Schedule the change

答案： B

解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

The first step in the IT change management process is to identify and propose the change. In this case, the technician notices a need (end-of-life network switches), so the appropriate action is to formally propose a change. This proposal would be documented and submitted for approval before any planning or implementation occurs.

According to the CompTIA A+ 220-1102 objectives under Operational Procedures (Domain 4.0), the change management process follows these typical steps:

- * Submit a change request (Propose the change)
- * Review and approval (Approve the change)
- * Planning and scheduling (Schedule the change)
- * Implementation
- * Documentation and review

Therefore, proposing the change is the correct first step in accordance with standard ITIL-based change management practices.

問題 #34

Which of the following Microsoft Windows versions would most likely be installed on a server?

- A. Windows 11 Pro
- B. Windows 10 Enterprise
- C. Windows 22H2
- D. Windows Server 2022

答案： D

解題說明：

The correct answer is C. Windows Server 2022, because Windows Server editions are specifically designed to run server workloads, such as file services, Active Directory, DNS, DHCP, virtualization, and application hosting.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, Windows Server operating systems differ significantly from desktop versions. They support server roles, higher hardware limits, and enterprise features not available in client editions.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that Windows 10 Enterprise and Windows 11 Pro are client operating systems intended for end-user workstations. While they can connect to servers, they are not designed to function as servers themselves.

The Mike Meyers / Mark Soper Lab Manual clarifies that version identifiers like 22H2 represent feature updates for Windows client operating systems, not standalone server products.

Because the question asks which version would most likely be installed on a server, the correct choice is Windows Server 2022, making C the correct answer.
