

F5CAB1 Test Pass4sure | F5CAB1 Testking Exam Questions

P.S. Free & New F5CAB1 dumps are available on Google Drive shared by BootcampPDF: <https://drive.google.com/open?id=1FEnTf8oQz8OtvYQDUBOMUhOnNBvnS7nQ>

Why do we need so many certifications? One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain a better job, earn more salary. This is the reason why we need to recognize the importance of getting the test F5CAB1 certification. Our passing rate is 98%-100% and there is little possibility for you to fail in the exam. But if you are unfortunately to fail in the exam we will refund you in full immediately. Some people worry that if they buy our F5CAB1 Exam Questions they may fail in the exam and the procedure of the refund is complicated.

Another version of BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) practice exams is also available at BootcampPDF and that is web-based. It has all specifications we have discussed above in the section of the F5 F5CAB1 desktop practice test software. But the only difference is that this web-based F5CAB1 practice exam software works online and needs no software installation. Furthermore, this F5CAB1 Practice Exam is supported by both Windows and iOS, Android, Mac, and Linux. Since it is the web-based F5CAB1 practice exam, you can take it from Opera, Chrome, Safari, Firefox, or any other popular browser.

F5CAB1 Testking Exam Questions | Certificate F5CAB1 Exam

We become successful lies on the professional expert team we possess, who engage themselves in the research and development of our F5CAB1 learning guide for many years. So we can guarantee that our F5CAB1 exam materials are the best reviewing material. Concentrated all our energies on the study F5CAB1 learning guide we never change the goal of helping candidates pass the exam. Our F5CAB1 test questions' quality is guaranteed by our experts' hard work. So what are you waiting for? Just choose our F5CAB1 exam materials, and you won't be regret.

F5 F5CAB1 Exam Syllabus Topics:

Topic	Details
Topic 1	BIG IP Administration Install Initial Configuration and Upgrade: This section of the exam measures skills of System Administrators and covers the lifecycle tasks for deploying and maintaining a BIG IP system. It includes installing the platform, performing initial setup, applying licenses, configuring basic networking, and planning and executing software upgrades and hotfixes.

Topic 2	• BIG IP Administration Data Plane Configuration: This section of the exam measures skills of System Administrators and covers configuring BIG IP objects that control data plane behavior. It focuses on setting up virtual servers, pools, nodes, monitors, and profiles so that applications are delivered reliably and efficiently according to design requirements.
Topic 3	• BIG IP Administration Data Plane Concepts: This section of the exam measures skills of Network Administrators and covers how BIG IP handles application traffic on the data plane. It includes understanding flow of traffic, key data path components, basic concepts of load balancing, and how security and performance features affect user traffic.
Topic 4	• BIG IP Administration Control Plane Administration: This section of the exam measures skills of System Administrators and covers managing the control plane where BIG IP is configured and administered. It includes working with user accounts, roles, device settings, configuration management, and using the graphical interface and command line for daily administrative tasks.
Topic 5	• BIG IP Administration Support and Troubleshooting: This section of the exam measures skills of Network Administrators and covers identifying and resolving common issues that affect BIG IP operation. It focuses on using logs, statistics, diagnostic tools, and basic troubleshooting methods to restore normal traffic flow and maintain stable application delivery.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q33-Q38):

NEW QUESTION # 33

The device is currently on v15.1.2.1.

The BIG-IP Administrator needs to boot the device back to v13.1.0.6 to gather data for troubleshooting.

The system shows:

Sys::Software Status

Volume Product Version Build Active Status Allowed

HD1.1 BIG-IP 15.1.2.1 0.0.10 yes complete yes

HD1.2 BIG-IP 13.1.0.6 0.0.3 no complete yes

Which is the correct command-line sequence to boot the device to version 13.1.0.6?

- A. **switchboot -b HD1.2, then reboot**
- B. Use tmsh to select a new boot volume, tmsh reboot HD1.2
- C. Use tmsh to select a new boot volume, tmsh switchboot HD1.2
- D. switchboot -l HD1.2, then reboot

Answer: A

Explanation:

To change the boot volume on a BIG-IP system from one installed TMOS version to another, the correct CLI tool is:

switchboot

The correct syntax uses the -b flag:

switchboot -b <volume>

This command marks the specified boot location as the one to be used on the next reboot.

Thus, to boot into HD1.2 which contains 13.1.0.6, the sequence is:

Mark HD1.2 as the next boot location:

switchboot -b HD1.2

Reboot the system:

reboot

This is the standard and officially supported method for selecting a different installed volume.

NEW QUESTION # 34

Which of the following actions is NOT required during the initial setup of a BIG-IP system?

- A. **Set up SSL certificates**

- B. Assign an administrative password
- C. Install a software license
- D. Set up self-IPs

Answer: A

Explanation:

Setting up SSL certificates is typically done after the initial setup, not during it. The main tasks during initial setup involve network configuration and licensing.

NEW QUESTION # 35

A BIG-IP Administrator is using Secure Copy Protocol (SCP) to transfer a TMOS image to the BIG-IP system in preparation for an upgrade.

To what directory should the file be transferred?

- A. /shared/images/
- B. /local/images/
- C. /var/images/

Answer: A

Explanation:

BIG-IP systems require all ISO images (base TMOS images and HotFix images) to be stored in a specific directory used for software installation:

/shared/images/

This directory:

- * Is the only supported location from which the BIG-IP software installation system validates and installs ISO files
- * Is accessible by both the GUI and TMSH installers
- * Has adequate storage space allocated specifically for images
- * Is part of the shared partition that persists across reboots

When transferring images via SCP, the administrator must copy them directly into /shared/images/ so that:

- * The GUI (System # Software Management # Available Images) can detect the image
- * TMSH install software image commands can reference it

Other directories such as /local/images/ or /var/images/ are not valid storage paths for software images.

NEW QUESTION # 36

An organization is planning to upgrade a BIG-IP system from 6.1.x to 7.1.x.

For a successful upgrade, the Service Check Date must be equal to or newer than the License Check Date required for 7.1.x.

Which command will show the Service Check Date on the BIG-IP system being upgraded?

- A. `grep "Service check date" /config/bigip.conf`
- B. `grep "Service check date" /config/BigDB.dat`
- C. `grep "Service check date" /config/bigip.license`
- D. `grep "Service check date" /config/svc_chk_date.dat`

Answer: C

Explanation:

BIG-IP licensing information, including the Service Check Date, is stored in the file:

/config/bigip.license

This file contains all license attributes downloaded from the F5 licensing server, including:

- * License key
- * Licensed modules
- * Useful life date
- * Service check date

The Service Check Date determines whether the system is eligible for upgrades to specific TMOS versions.

When reviewing upgrade readiness, administrators extract this value directly from the license file with:

`grep "Service check date" /config/bigip.license`

Why the other options are incorrect:

* /config/bigip.conf stores BIG-IP configuration objects, not license metadata.
 * /config/svc_chk_date.dat is not a valid file in the licensing system; it does not contain license parameters.
 * /config/BigDB.dat stores internal database values, not licensing attributes.
 Thus, only the bigip.licensefile contains the correct licensing information required for verifying upgrade eligibility.

NEW QUESTION # 37

Which one of the following is a port and protocol combination allowed by the Allow Default setting for Port Lockdown?

- A. TCP 443
- B. TCP 80
- C. UDP 8443

Answer: A

Explanation:

Port Lockdown controls which ports and protocols a Self IP will respond to.

The Allow Default setting permits only a predefined set of BIG-IP internal and required service ports.

The Allow Default list includes:

TCP 443 HTTPS (Management/TMUI access via Self-IP)

TCP 4353 CMI (device sync)

TCP/UDP ports related to HA communication

Other essential internal F5 ports

Why TCP 443 is correct:

It is one of the officially allowed ports under Allow Default.

It enables HTTPS/TMUI access through a Self IP.

NEW QUESTION # 38

.....

Our F5 BIG-IP Administration Install, Initial Configuration, and Upgrade web-based practice test software has all the specifications of the desktop BIG-IP Administration Install, Initial Configuration, and Upgrade practice exam software. This web-based BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) practice test software doesn't need any installation or plugins. You can attempt the F5 BIG-IP Administration Install, Initial Configuration, and Upgrade web-based practice test using Chrome, Firefox, Opera, Internet Explorer, or F5 Edge. Our browser-based BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) practice exam software is also compatible with Windows, Mac, Linux, Android, and iOS.
