Certified Cisco 200-901 Questions & 200-901 Latest Test Experience

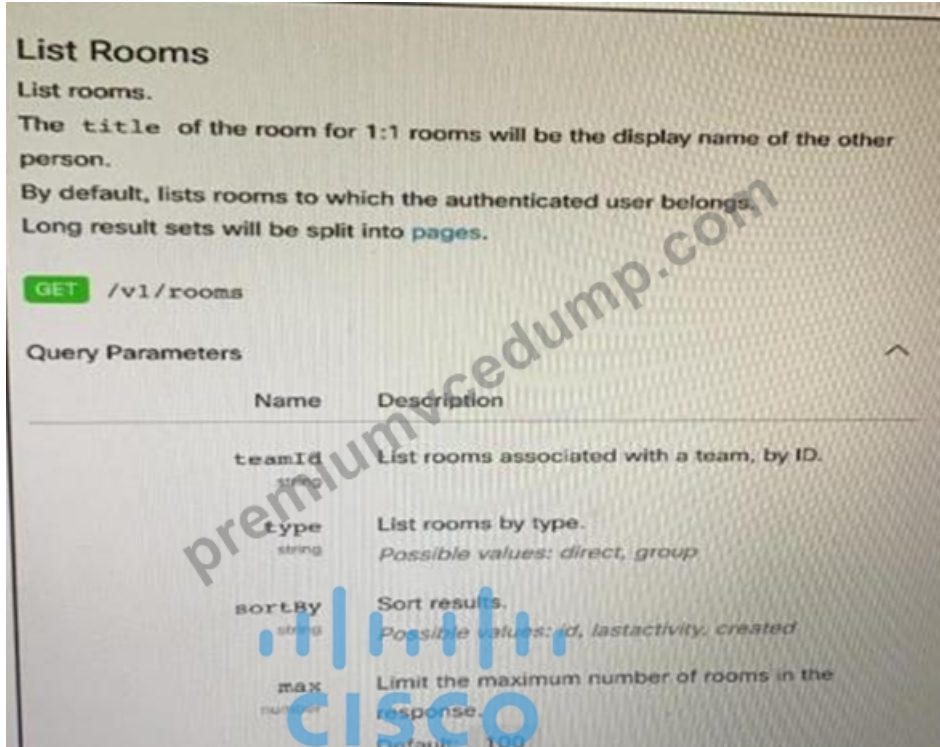

You only need 20-30 hours to learn 200-901 exam torrent and prepare the 200-901 exam. Many people, especially the in-service staff, are busy in their jobs, learning, family lives and other important things and have little time and energy to learn and prepare the

200-901 exam. But if you buy our 200-901 Test Torrent, you can invest your main energy on your most important thing and spare 1-2 hours each day to learn and prepare the exam. Our 200-901 exam questions and answers are based on the real exam and conform to the popular trend in the candidates.

Cisco DevNet Associate Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

Refer to the exhibit.

Fill in the blank to complete the query parameter and value so that the result set is returned in reverse chronological order (most recent first) based on when message were entered.

Answer:

Explanation:

?sortBy=lastactivity

NEW QUESTION # 44

What is the purpose of running tests before writing code in test-driven development?

- A. to provide proof of the work carried out
- B. to ensure that the tests pass
- C. to find unexpected failures in the tests
- D. to demonstrate that the tests fail for expected reasons

Answer: D

Explanation:

In Test-Driven Development (TDD), the process starts with writing tests before writing the actual code. The primary purpose of running tests before writing the code is to ensure that the tests fail initially. This failure demonstrates that the tests are correctly identifying the absence of the desired functionality or the presence of bugs. Once the tests are verified to fail for the expected reasons, the developer then writes the minimal code necessary to pass the tests, ensuring that the new functionality works as intended and that the codebase is continuously tested.

Test-Driven Development by Example

NEW QUESTION # 45

Refer to the exhibit.

```

1  from requests import request
2  from requests.auth import HTTPBasicAuth
3  from sys import argv
4  url = "https://" + argv[1] + ":443/restconf/data/native/ip/route"
5  auth = HTTPBasicAuth('developer', 'Cisc012345')
6  payload = {
7      "Cisco-IOS-XE-native:route": {
8          "ip-route-interface-forwarding-list": [
9              {
10                 "prefix": argv[2],
11                 "mask": argv[3],
12                 "fwd-list": [
13                     {
14                         "fwd": "GigabitEthernet1",
15                         "interface-next-hop": [
16                             {
17                                 "ip-address": argv[4]
18                             }
19                         ]
20                     }
21                 ]
22             }
23         ]
24     }
25 }
26 headers = {
27     'Content-Type': 'application/yang-data+json',
28     'Accept': 'application/yang-data+json',
29 }
30 response = request("PATCH", url, auth=auth, headers=headers, json = payload,
31                    verify=False)

```

A network engineer must change the configuration on devices daily. The Python script must collect CLI arguments from the user, organize data according to the Cisco-IOS-XE-native YANG model, and utilize Cisco REST APIs to make the configuration. Which workflow is being automated by the Python script?

- A. including a route on the device and overwriting the current routes
- B. adding a new route to a device
- C. deleting the route that is passed through the command-line variables
- D. updating an existing route on the device

Answer: D

NEW QUESTION # 46

Refer to the exhibit.

```

SDK Documentation:
Class: Devices
Device List: get_device_list()
Get device: get_device_by_id(id)
Delete device: delete_device_by_id(id)
Device status: inventoryStatusDetail
Device Parameters:
  id
  uptime
  type

```

A Python script must delete all Cisco Catalyst 9300 Series switches that have an uptime that is greater than 90 days. The script must also query for the status of all the other devices. Drag and drop the code from the bottom onto the bottom box. The code is missing to complete the script. Not all options are used.

```

from dnacenterdk import DNACenterAPI
device_type = "Cisco Catalyst 9300 Switch"
api_session = DNACenterAPI(
    base_url="https://sandboxdnac.cisco.com",
    username="user",password="password"
)

devices = _____

for device in devices:
    if int(device.upTime.split()[0]) > 90:
        if device.type == device_type:
            output = _____
            print(output)

        else:
            selected_device = _____
            output = _____
            print(output)

```

```

selected_device.response.inventoryStatusDetail(device)
api_session.devices.get_device_list().response
api_session.devices.delete_device_by_id(device.id)
api_session.devices.get_device_by_id(device.id)
selected_device.response.inventoryStatusDetail

```

Answer:

Explanation:

```

from dnacenterdk import DNACenterAPI
device_type = "Cisco Catalyst 9300 Switch"
api_session = DNACenterAPI(
    base_url="https://sandboxdnac.cisco.com",
    username="user",password="password"
)

devices = api_session.devices.get_device_list().response

for device in devices:
    if int(device.upTime.split()[0]) > 90:
        if device.type == device_type:
            output = api_session.devices.delete_device_by_id(device.id)
            print(output)

        else:
            selected_device = api_session.devices.get_device_by_id(device.id)
            output = selected_device.response.inventoryStatusDetail
            print(output)

```

```

selected_device.response.inventoryStatusDetail(device)
api_session.devices.get_device_list().response
api_session.devices.delete_device_by_id(device.id)
api_session.devices.get_device_by_id(device.id)
selected_device.response.inventoryStatusDetail

```

Explanation

Table Description automatically generated

```

from dnacentersdk import DNACenterAPI

device_type = "Cisco Catalyst 9300 Switch"
api_session = DNACenterAPI(
    base_url="https://sandboxdnac.cisco.com",
    username="user",password="password"
)

devices = api_session.devices.get_device_list().response

for device in devices:
    if int(device.upTime.split()[0]) > 90:
        if device.type == device_type:
            output = api_session.devices.delete_device_by_id(device.id)
            print(output)

        else:
            selected_device = api_session.devices.get_device_by_id(device.id)
            output = selected_device.response.inventoryStatusDetail
            print(output)

selected_device.response.inventoryStatusDetail(device)

```

NEW QUESTION # 47

Drag and drop elements of the RESTCONF protocol stack from the left onto the correct description on the right. Not all elements on the left are used.

Answer:

Explanation:

NEW QUESTION # 48

.....

Actual DevNet Associate Exam (200-901) dumps are designed to help applicants crack the Cisco 200-901 test in a short time. There are dozens of websites that offer 200-901 exam questions.
