JN0-336 Exam Overview - JN0-336 Reliable Braindumps Book

Are you planning to take the Security, Specialist (JNCIS-SEC) (JN0-336) certification test and don't know where to download real and updated JN0-336 exam questions? FreeCram is offering Juniper JN0-336 Dumps questions, especially for applicants who want to prepare quickly for the Security, Specialist (JNCIS-SEC) test. Candidates who don't study from real dumps questions fail to clear the Security, Specialist (JNCIS-SEC) examination in a short time.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q75-Q80):

NEW QUESTION # 75

Which two statements are correct about SSL proxy server protection? (Choose two.)

- A. The servers must be configured to use the SSL proxy function on the SRX Series device.
- B. You must import the root CA on the servers.
- C. You must load the server certificates on the SRX Series device.
- D. You do not need to configure the servers to use the SSL proxy the function on the SRX Series device.

Answer: C,D

Explanation:

When using SSL proxy, the servers themselves do not require any special configuration to utilize the SSL proxy function on the SRX device. The SSL proxy operates transparently, intercepting and decrypting SSL/TLS traffic before it reaches the servers.

For the SSL proxy to function effectively, especially in server protection mode where it impersonates the server to the client, it is necessary to load the server's certificates onto the SRX device. This allows the SRX to establish a trusted connection with the client using the server's credentials.

NEW QUESTION # 76

Regarding static attack object groups, which two statements are true? (Choose two.)

- A. Matching attack objects are automatically added to a custom group.
- B. You must manually add matching attack objects to a custom group.
- C. Group membership does not automatically change when Juniper updates the IPS signature database.
- D. Group membership automatically changes when Juniper updates the IPS signature database.

Answer: B,C

NEW QUESTION # 77

You are currently using a third-party threat analyzer. You want your SRX Series device to send decrypted SSE traffic to..... In this scenario, which feature should you configure on the SRX device?

- A. IPS IPanotify action
- B. JSA vulnerability assessment
- C. SSL decryption mirroring
- D. Phase 2 proxy ID

Answer: A,B

NEW QUESTION # 78

Exhibit

When trying to set up a server protection SSL proxy, you receive the error shown. What are two reasons for this error? (Choose two.)

- A. The SSL proxy certificate ID does not exist.
- B. The SSL proxy certificate ID is part of a blocklist.
- C. The SSL proxy certificate ID is for a forwarding proxy.
- D. The SSL proxy certificate ID does not have the correct renegotiation option set.

Answer: A,D

Explanation:

The error message shown in the exhibit regarding the SSL proxy setup indicates an issue with the type of server certificate being used. The error explicitly states, "Unsupported cert type of server certid." Here are two plausible reasons for this error based on the options provided:

Option B. The SSL proxy certificate ID does not have the correct renegotiation option set.

This option points to a configuration issue related to the properties or capabilities of the certificate, such as renegotiation, which if not set correctly according to the expected requirements of the SSL proxy, might lead to the certificate being unsupported.

Renegotiation settings are critical in ensuring secure connections, and mismatches in configuration can result in errors.

Option D. The SSL proxy certificate ID does not exist.

If the certificate ID being referred to in the SSL proxy profile does not exist in the device's certificate store or is incorrectly referenced, the system will be unable to apply the configuration, leading to an error during the commit operation. This situation would typically result in an error indicating that the system can't find or recognize the specified certificate ID.

NEW QUESTION # 79

On which three Hypervisors is vSRX supported? (Choose three.)

- A. Citrix Hypervisor
- B. VMware ESXI
- C. Hyper-V
- D. Oracle VM
- E. KVM

Answer: B,C,E

Explanation:

vSRX is a virtual firewall that runs as a software instance on a hypervisor. A hypervisor is a software layer that allows multiple virtual machines to run on a single physical host. vSRX supports three hypervisors: VMware ESXi, Hyper-V, and KVM. VMware ESXi is a hypervisor that runs on x86 servers and supports various operating systems and applications. Hyper-V is a hypervisor that runs on Windows Server and supports Windows and Linux virtual machines. KVM (Kernel-based Virtual Machine) is a hypervisor that runs on Linux and supports Linux, Windows, and other operating systems.
