### Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q170-Q175):

#### NEW QUESTION # 170

Refer to the exhibit. An engineer is investigating the critical alert received in Cisco Secure Network Analytics. The engineer confirms that the incident is valid. Which two actions must be taken? (Choose two.)

- A. Uninstall the Conduit software.
- **B. Quarantine the host**
- C. Block IP address 66.77.197.165
- D. Shut down the host.
- **E. Inform the incident management team**

**Answer: B,E**

Explanation:

The alert identifies known malicious communication from a host with Conduit software installed. Conduit is flagged as spyware/malware by Cisco Secure Analytics.

A: Alerting the incident response team is standard procedure when high-priority threats are confirmed.

E: Quarantining the host via endpoint isolation (e.g., Secure Endpoint or network-based access control) is a critical action to prevent lateral movement.

Blocking the IP alone (B) does not stop internal damage. Shutting down the host (D) prematurely removes forensic evidence.

Uninstalling the software (C) should occur later during recovery after analysis.
