It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
Topic 2	<ul style="list-style-type: none">VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.

Topic 3	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
Topic 4	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.
Topic 5	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. VMware Cloud Foundation 9.0 Architect Sample Questions (Q15-Q20):

NEW QUESTION # 15

A VMware Cloud Foundation design incorporates the following technical requirements:

All management components must have their login sessions timeout after 2 minutes of inactivity.

Communication between management components should be limited to required ports only.

Modifications required by compliancy should not impact the management components' functionality.

What would be the recommendation from a design perspective that would aid in achieving the above requirements?

- A. Consult the vSphere Security Configuration kit
- B. Leverage the results of a vulnerability assessment and apply the recommendations
- C. Apply NSX DFW (Distributed Firewall) to achieve zero-trust
- **D. Consult the Compliance Kit for VMware Cloud Foundation**

Answer: D

Explanation:

These requirements focus on security and compliance for VCF management components (e.g., vCenter, NSX Manager).

Option C, "Consult the Compliance Kit for VMware Cloud Foundation,"

provides specific guidance on configuring session timeouts (via SSO settings), restricting ports (via firewall rules), and ensuring compliance changes maintain functionality, tailored to VCF 5.2.

Option A (vSphere Security kit) is vSphere-specific, less comprehensive for VCF's multi-component environment.

Option B (vulnerability assessment) is reactive, not prescriptive.

Option D (NSX DFW) addresses networking but not session timeouts or compliance holistically. The VCF Compliance Kit is purpose-built for such requirements.

- A. Broadcom NVMe SSD
- B. Broadcom RAID Controller
- C. vSAN
- D. vSphere DRS

Answer: A,B,C

Explanation:

Broadcom RAID Controllers, vSAN, and NVMe SSDs are essential for managing storage performance in VMware environments.

NEW QUESTION # 18

Which Broadcom products are essential for optimizing storage performance in VMware environments?

- A. Broadcom NVMe SSD
- B. Broadcom RAID Controller
- C. vSAN
- D. VMware vSphere HA

Answer: A,B,C

Explanation:

Broadcom RAID Controllers, NVMe SSDs, and vSAN are essential for optimizing storage performance in VMware environments.

NEW QUESTION # 19

Which design defines how to arrange and use components and features of the infrastructure to satisfy service dependencies and other relationships specified in the Conceptual Model?

- A. Configuration Guide
- B. High Availability Design
- C. Physical Design
- D. Logical Design

Answer: D

Explanation:

The Conceptual Model identifies high-level requirements, constraints, assumptions, and risks. The Logical Design translates those into how solution components (clusters, networks, storage, security zones, etc.) are structured to meet dependencies and requirements.

* Physical Design comes after Logical Design and defines specific hardware, IP addresses, VLANs, etc.

* High Availability Design is a subset of the logical/physical design focusing only on resiliency.

* Configuration Guide is implementation-level documentation, not design.

Thus, the Logical Design defines how the infrastructure's capabilities are arranged to satisfy conceptual dependencies.
