## Newest 100% Free 350-601 – 100% Free Examcollection Free Dumps | 350-601 Practice Exam Questions

The 350-601 exam questions by experts based on the calendar year of all kinds of exam after analysis, it is concluded that conforms to the exam thesis focus in the development trend, and summarize all kind of difficulties you will face, highlight the user review must master the knowledge content. And unlike other teaching platform, the Implementing Cisco Data Center Core Technologies (350-601 DCCOR) study question is outlined the main content of the calendar year examination questions didn't show in front of the user in the form of a long time, but as far as possible with extremely concise prominent text of 350-601 Test Guide is accurate incisive expression of the proposition of this year's forecast trend, and through the simulation of topic design meticulously.

Cisco 350-601 exam is intended for IT professionals who are involved in designing, deploying, and managing data center technologies. This includes network engineers, system administrators, network architects, and IT managers. 350-601 exam is also suitable for individuals who wish to gain a deeper understanding of data center technologies and improve their skills in this area. Passing the Cisco 350-601 Exam is a testament to an individual's expertise in data center technologies, which can lead to better job opportunities and higher salaries in the IT industry.

## Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q230-Q235):

### NEW QUESTION # 230

An engineer is deploying a VXLAN EVPN environment for a customer. The customers environment suffers from a large amount of flooding related to hosts attempting to resolve the MAC to IP mapping on the network segment. Which feature prevents this issue from happening in the future?

- A. IP ARP SYNC
- B. anycast rendezvous point
- C. anycast gateway
- **D. IP ARP suppression**

**Answer: D**

Explanation:

IP ARP suppression (D) is used in VXLAN EVPN environments to minimize flooding. When enabled, it allows the local switch to respond to ARP requests for known hosts, thus preventing the need to flood these requests across the entire network segment1. This feature is particularly useful in scenarios where there is a large amount of ARP traffic that could potentially lead to flooding, as it reduces unnecessary broadcast traffic by handling ARP resolution within the control plane2.

References: The role and configuration of IP ARP suppression in VXLAN EVPN environments are detailed in Cisco's documentation and best practice guides for VXLAN BGP EVPN

### NEW QUESTION # 231

Host 1 is in VLAN 100 located in DataCenter 1 and Host2 is in VLAN200 located in DataCenter2. Which OTV VLAN mapping configuration allows Layer 2 connectivity between these two hosts?

□

- A. Option A
- B. Option D
- **C. Option B**
- D. Option C

**Answer: C**

Explanation:

### NEW QUESTION # 232

An engineer must configure the HSRP protocol to implement redundancy using two Cisco Nexus Series Switches In addition, the HSRP must meet these requirements

- \* Switch1 must retain the primary role if switch2 goes offline
- \* Switch1 must retain the primary role until normal conditions are restored.
- \* Switch1 and switch2 must ensure that the routing tables are converged before taking the active role
- \* switch2 must retain the primary role if the default gateway is not reachable Drag and drop the configuration commands from the right to the left to meet the requirements. The commands are used more than once Not all commands are used

□

**Answer:**

Explanation:

□

### NEW QUESTION # 233

What is an advantage of using Network File System (NFS) rather than Storage Area Network (SAN)?

- A. NFS supports booting the operating system.
- B. NFS has lower latency than SAN.
- C. NFS supports more types of file systems.
- **D. NFS allows direct file access.**

**Answer: D**
