## New ACD201 Braindumps Sheet & ACD201 Braindumps Torrent

This is a wise choice, after using our ACD201 training materials, you will realize your dream of a promotion because you deserve these reports and your efforts will be your best proof. Therefore, when you are ready to review the exam, you can fully trust our products, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly. Thus, users do not have to worry about such trivial issues as typesetting and proofreading, just focus on spending the most practice to use our ACD201 Learning Materials. After careful preparation, I believe you will be able to pass the exam.

### Appian Senior Developer Sample Questions (Q106-Q111):

#### NEW QUESTION # 106

You need to create a read-only grid that displays support case information. Data for the support cases is mapped to the "Case" record type with data sync enabled.

Within the record, there are fields named "createdDateTime" and "resolvedDateTime". These two fields store the timestamps for when a case is created and resolved, respectively.

The grid includes a column indicating the number of hours between when the case was created and when it was resolved. This column must be sortable within the grid.

How should you calculate the hour value that will display in the column?

- A. Create a custom record field that evaluates at sync-time, and calculates the number of hours between when the case was created and the current date and time.
- B. Create a custom record field that evaluates in real-time, and calculates the number of hours between when the case was created and when it was resolved.
- C. Within the grid column, utilize an Appian function to calculate the number of hours between when the case was created and when it was resolved.

**Answer: B**

Explanation:

A custom record field that evaluates in real-time and calculates the hours between "createdDateTime" and "resolvedDateTime" ensures the calculated value is available as a sortable field within the read-only grid.

#### NEW QUESTION # 107

An insurance application has a dashboard in which all the cases with "Accident" case type and "Health Insurance" insurance type are displayed to the user, using the following query:

□ You need to update the query entity to display all the cases that are "Accident" case type and "Health Insurance" insurance type, or created in the last ten days.

What is the right configuration for the logical expression?

- A.
- B.
- C.

**Answer: B**

Explanation:

A filter for createdDate >= today() - 10 (records created in the last 10 days).

A nested AND logical expression that requires both caseType = "Accident" and insuranceType = "Health Insurance".

### NEW QUESTION # 108

A recent Health Check report of your application indicates an increased risk of large context size in the interfaces. What are two possible contributors to this risk? (Choose two.)

- A. The load variable has a web service response as JSON.
- B. Data transformation is performed inside the interface rather than delegated to the source system.
- C. Multiple local variables hold duplicate data.
- D. Local variables are set to refresh every five minutes.

**Answer: B,C**

Explanation:

Performing data transformation inside the interface can increase the amount and size of context data stored, raising context size risk. Multiple local variables holding duplicate data unnecessarily inflate the interface's memory footprint, contributing to large context size.

### NEW QUESTION # 109

You're developing a record view for a case management system that enables users to upload files to a specific location within an external records application.

Your requirements are:

In this record view, there should be a record action that allows the user to upload a file to the interface and configure the metadata (name, author, file size) before submitting.

If the file is larger than 250MB, the user will be notified that the file will be uploaded overnight.

Once the file has been successfully uploaded, the file will appear on the record view and the user can interact with the file.

Which two pieces of user-facing information must be captured from this business process so that you can develop this record view? (Choose two.)

- A. The email of the system administrator so that an email can be sent to them if the integration fails.
- B. How the user wishes to interact with these files in the record view - as a grid or a series of card layouts.
- C. The time of file upload if the file is less than 250MB.
- D. The location of where the file will be uploaded to in the external records application.

**Answer: B,D**

Explanation:

You need to know the target location in the external records application to properly upload the file.

Understanding how users want to interact with files (grid or card layout) is essential for designing the record view interface.

### NEW QUESTION # 110

You need to implement a requirement where a third-party system starts a process in Appian. The third-party system can invoke a service only through Web Services Description Language (WSDL).

What should you do to start the process in Appian?

- A. Create a default WSDL URL using process model UUID.
- B. Create a custom plug-in.
- C. Expose process model as a web service.

**Answer: C**

### NEW QUESTION # 111

.....

As is known to us, getting the newest information is very important for all people to pass the exam and get the certification in the shortest time. In order to help all customers gain the newest information about the ACD201 exam, the experts and professors from

our company designed the best ACD201 Study Materials. The IT experts will update the system every day. If there is new information about the exam, you will receive an email about the newest information about the ACD201 study materials.
