

Salesforce Salesforce-AI-Specialist자격증문제 & Salesforce-AI-Specialist인증덤프샘플다운로드

2026 ITDumpsKR 최신 Salesforce-AI-Specialist PDF 버전 시험 문제집과 Salesforce-AI-Specialist 시험 문제 및 답변 무료 공유 : https://drive.google.com/open?id=17O9YqDT9y7sVjqBkJPu_o5BJTOQdE2Lr

인재도 많고 경쟁도 많은 이 사회에, 업계인재들은 인기가 아주 많습니다. 하지만 팽팽한 경쟁률도 무시할 수 없습니다. 많은 Salesforce인재들도 어려운 인증시험을 패스하여 자기만의 자리를 지키고 있습니다. 우리 ITDumpsKR에서는 마침 전문적으로 이러한 Salesforce인사들에게 편리하게 시험을 Salesforce-AI-Specialist패스할 수 있도록 유용한 자료들을 제공하고 있습니다.

Salesforce Salesforce-AI-Specialist 시험요강:

주제	소개
주제 1	Einstein Trust Layer: This section evaluates the skills of Salesforce AI specialists responsible for implementing security protocols and safeguarding data privacy. It emphasizes the security, privacy, and foundational features of the Einstein Trust Layer.
주제 2	Agentforce Tools: In this topic, AI specialists get knowledge using agents when it is appropriate. Moreover, the topic explains the working of agents and reasoning engine powers Agentforce. Lastly, the topic focuses on managing and monitoring agent adoption.
주제 3	Prompt Builder: This section evaluates the expertise of AI specialists working with Salesforce's AI tools. It focuses on the Prompt Builder feature, requiring candidates to understand its usage based on business needs.
주제 4	Generative AI in CRM Applications: This part of the exam assesses AI specialists' knowledge of generative AI within CRM systems. It covers the use of generative AI features in Einstein for Sales and Einstein for Service.
주제 5	Model Builder: This portion of the exam focuses on Salesforce AI specialists' expertise in working with AI models within Salesforce environments. Candidates will need to demonstrate knowledge of when to use the Model Builder and how to configure standard, custom, or Bring Your Own Large Language Model (BYOLLM) generative models to meet business needs.

Salesforce-AI-Specialist 인증덤프 샘플 다운로드 - Salesforce-AI-Specialist 완벽한 덤프문제자료

ITDumpsKR에서 출시한 Salesforce인증 Salesforce-AI-Specialist 덤프는 시험문제접유율이 가장 높은 시험대비자료입니다. 실제 Salesforce인증 Salesforce-AI-Specialist 시험문제유형과 같은 형식으로 제작된 Salesforce인증 Salesforce-AI-Specialist 시험공부자료로서 ITDumpsKR 덤프의 실용가치를 자랑하고 있습니다. 덤프를 공부하여 시험불합격하시면 덤프비용은 환불처리해드립니다.

최신 AI Associate Salesforce-AI-Specialist 무료 샘플문제 (Q141-Q146):

질문 # 141

An AI Specialist built a Field Generation prompt template that worked for many records, but users are reporting random failures with token limit errors.

What is the cause of the random nature of this error?

- A. The template type needs to be switched to Flex to accommodate the variable amount of tokens generated by the prompt grounding.
- **B. The number of tokens generated by the dynamic nature of the prompt template will vary by record.**
- C. The number of tokens that can be processed by the LLM varies with total user demand.

정답: B

설명:

The reason behind the token limit errors lies in the dynamic nature of the prompt template used in Field Generation. In Salesforce's AI generative models, each prompt and its corresponding output are subject to a token limit, which encompasses both the input and output of the large language model (LLM). Since the prompt template dynamically adjusts based on the specific data of each record, the number of tokens varies per record. Some records may generate longer outputs based on their data attributes, pushing the token count beyond the allowable limit for the LLM, resulting in token limit errors.

This behavior explains why users experience random failures-it is dependent on the specific data used in each case. For certain records, the combined input and output may fall within the token limit, while for others, it may exceed it. This variation is intrinsic to how dynamic templates interact with large language models.

Salesforce provides guidance in their documentation, stating that prompt template design should take into account token limits and suggests testing with varied records to avoid such random errors. It does not mention switching to Flex template type as a solution, nor does it suggest that token limits fluctuate with user demand. Token limits are a constant defined by the model itself, independent of external user load.

질문 # 142

Universal Containers' current AI data masking rules do not align with organizational privacy and security policies and requirements. What should an AI Specialist recommend to resolve the issue?

- A. Enable data masking for sandbox refreshes.
- B. Add new data masking rules in LLM setup.
- **C. Configure data masking in the Einstein Trust Layer setup.**

정답: C

설명:

When Universal Containers' AI data masking rules do not meet organizational privacy and security standards, the AI Specialist should configure the data masking rules within the Einstein Trust Layer. The Einstein Trust Layer provides a secure and compliant environment where sensitive data can be masked or anonymized to adhere to privacy policies and regulations.

Option A, enabling data masking for sandbox refreshes, is related to sandbox environments, which are separate from how AI interacts with production data.

Option C, adding masking rules in the LLM setup, is not appropriate because data masking is managed through the Einstein Trust

Layer, not the LLM configuration.

The Einstein Trust Layer allows for more granular control over what data is exposed to the AI model and ensures compliance with privacy regulations.

Salesforce AI Specialist Reference:

질문 # 143

What is an AI Specialist able to do when the "Enrich event logs with conversation data" setting in Einstein Copilot is enabled?

- A. View the user click path that led to each copilot action.
- B. Generate details reports on all Copilot conversations over any time period.
- C. View session data including user input and copilot responses for sessions over the past 7 days.

정답: C

설명:

When the "Enrich event logs with conversation data" setting is enabled in Einstein Copilot, it allows an AI Specialist or admin to view session data, including both the user input and copilot responses from interactions over the past 7 days. This data is crucial for monitoring how the copilot is being used, analyzing its performance, and improving future interactions based on past inputs.

* This setting enriches the event logs with detailed conversational data for better insights into the interaction history, helping AI specialists track AI behavior and user engagement.

* Option A, viewing the user click path, focuses on navigation but is not part of the conversation data enrichment functionality.

* Option C, generating detailed reports over any time period, is incorrect because this specific feature is limited to data for the past 7 days.

Salesforce AI Specialist References: You can refer to this documentation for further insights: https://help.salesforce.com/s/articleView?id=sf.einstein_copilot_event_logging.htm

질문 # 144

Amid their busy schedules, sales reps at Universal Containers dedicate time to follow up with prospects and existing clients via email regarding renewals or new deals. They spend many hours throughout the week reviewing past communications and details about their customers before performing their outreach.

Which standard Copilot action helps sales reps draft personalized emails to prospects by generating text based on previous successful communications?

- A. Einstein Copilot Action: Summarize Record
- B. Einstein Copilot Action: Draft or Revise Sales Email
- C. Einstein Copilot Action: Find Similar Opportunities

정답: B

설명:

For sales reps who need to draft personalized emails based on previous communications, the AI Specialist should recommend the Einstein Copilot Action: Draft or Revise Sales Email. This action uses AI to generate or revise email content, leveraging past successful communications to create personalized and relevant outreach to prospects or clients.

* Find Similar Opportunities is used for opportunity matching, not email drafting.

* Summarize Record provides a summary of customer data but does not directly help with drafting emails.

For more information, refer to Salesforce's Einstein Copilot documentation on standard actions for sales teams.

질문 # 145

In Model Playground, which hyperparameters of an existing Salesforce-enabled foundational model can an AI Specialist change?

- A. Temperature, Frequency Penalty, Presence Penalty
- B. Temperature, Frequency Penalty, Output Tokens
- C. Temperature, Top-k sampling, Presence Penalty

정답: A

설명:

InModel Playground, an AI specialist working with a Salesforce-enabled foundational model has control over specific hyperparameters that can directly affect the behavior of the generative model:

* Temperature: Controls the randomness of predictions. A higher temperature leads to more diverse outputs, while a lower temperature makes the model's responses more focused and deterministic.

* Frequency Penalty: Reduces the likelihood of the model repeating the same phrases or outputs frequently.

* Presence Penalty: Encourages the model to introduce new topics in its responses, rather than sticking with familiar, previously mentioned content.

These hyperparameters are adjustable to fine-tune the model's responses, ensuring that it meets the desired behavior and use case requirements. Salesforce documentation confirms that these three are the key tunable hyperparameters in the Model Playground. For more details, refer to Salesforce AI Model Playground guidance from Salesforce's official documentation on foundational model adjustments.
