## CompTIA XK0-005 Authorized Exam Dumps & XK0-005 Official Cert Guide

The PassExamDumps CompTIA XK0-005 exam dumps are ready for quick download. Just choose the right PassExamDumps CompTIA XK0-005 exam questions format and download it after paying an affordable PassExamDumps CompTIA Linux+ Certification Exam (XK0-005) practice questions charge and start this journey. Best of luck in CompTIA XK0-005 exam and career!!!

### CompTIA Linux+ Certification Exam Sample Questions (Q50-Q55):

#### NEW QUESTION # 50

A systems administrator was tasked with assigning the temporary IP address/netmask 192.168.168.1/255.255.255.255 to the interface eth0 of a Linux server.

When adding the address, the following error appears:

```
# ip address add 192.168.168.1/33 dev eth0
```

Error: any valid prefix is expected rather than "192.168.168.1/33".

Based on the command and its output above, which of the following is the cause of the issue?

- A. The CIDR value /33 should be /32 instead.
- B. The IP address 192.168.168.1 is already in use.
- C. There is no route to 192.168.168.1/33.
- D. The interface eth0 does not exist.

**Answer: A**

Explanation:

The cause of the issue is that the CIDR value /33 is invalid for an IPv4 address. The CIDR value represents the number of bits in the network prefix of an IP address, and it can range from 0 to 32 for IPv4 addresses. A CIDR value of /33 would imply a network prefix of more than 32 bits, which is impossible for an IPv4 address. To assign a temporary IP address/netmask of 192.168.168.1/255.255.255.255 to eth0, the CIDR value should be /32 instead, which means a network prefix of 32 bits and a host prefix of 0 bits. There is no route to 192.168.168.1/33 is not the cause of the issue, as the ip address add command does not check the routing table. The interface eth0 does not exist is not the cause of the issue, as the ip address add command would display a different error message if the interface does not exist. The IP address 192.168.168.1 is already in use is not the cause of the issue, as the ip address add command would display a different error message if the IP address is already in use. Reference: [CompTIA Linux+ (XK0-005) Certification Study Guide], Chapter 13: Networking Fundamentals, page 435.

### NEW QUESTION # 51

A systems administrator is investigating why one of the servers has stopped connecting to the internet.

Which of the following is causing the issue?

- A. The DNS address has been commented out in the configuration file.
- B. No default route is defined.
- C. Wired connection 1 is offline.
- D. The search entry in the /etc/resolv.conf file is incorrect.

**Answer: B**

Explanation:

The issue is caused by the lack of a default route defined in the /etc/sysconfig/network-scripts/ifcfg-`enp0s3` file. A default route is a special route that specifies where to send packets that do not match any other routes in the routing table. Without a default route, the server will not be able to communicate with hosts outside its local network. The default route is usually configured with the GATEWAY option in the network interface configuration file. For example, to set the default gateway to 192.168.1.1, the file should contain:

```
GATEWAY=192.168.1.1
```

### NEW QUESTION # 52

A systems administrator wants to ensure all the latest patches and updates are automatically synced to the local repository every two hours on Sundays through Tuesdays in the month of May. Which of the following cron entries can the administrator use to achieve this goal? (Select two.)

- A. `0 */2 * 5 0-2 /root/update-from-remote-to-local.sh`
- B. `0 0,2,4,6,8,10,12,14 * 5 0-3 /root/update-from-remote-to-local.sh`
- C. `0 0,2,4,6,8,10,12,14 * 5 0-2 /root/update-from-remote-to-local.sh`
- D. `0 0-23/2 * 5 0-2 /root/update-from-remote-to-local.sh`
- E. `0 0-23/2 * 5 0-3 /root/update-from-remote-to-local.sh`
- F. `0 */2 * 5 0-3 /root/update-from-remote-to-local.sh`

**Answer: B,F**

### NEW QUESTION # 53

A junior systems administrator is creating a cron job. The cron job requirements are as follows:

- Run the hello.shscript every hour (24 times in one day).

- Run it on Monday only.

Given this scenario, which of the following crontab options should be configured to meet these requirements?

- A. 1 \*\*\* 0 hello.sh
- **B. 0 \*\*\* 1 hello.sh**
- C. 0 24 \*\* Monday hello.sh
- D. 24 \*\*\* Monday hello.sh

**Answer: B**

Explanation:

<https://www.debian.org/doc/manuals/system-administrator/ch-sysadmin-time.html> Just as it hits 0 minutes in the day, cron job runs the task. For example, 00:00, 01:00, 02:00 and so on. If it hits 0 minute 24 times, that takes care of every hour in the day. (If not every hour then it would have been \*) The 1 in 5th position represent Monday. You can use 1 or mon but not Monday.

#### NEW QUESTION # 54

A Linux administrator is testing connectivity to a remote host on a shared terminal. The administrator wants to allow other users to access the terminal while the command is executing.

Which of the following commands should the administrator use?

- A. bg ping remotehost
- B. fg ping remotehost
- C. ping remotehost < results
- **D. ping remotehost &**

**Answer: D**

Explanation:

bg : put the recently suspended process in the background

fg : put the recently suspended process in the foreground

& : run a program in the background to begin with
