

Valid AACN - CCRN-Pediatric - New Critical Care Nursing Exam Test Dumps

New 2025 CCRN Pediatric Practice Exam (Critical Care Registered Nurse) by American Association of Critical Care Nurses (AACN) with 150 Questions and Answers

Question 1

In 2025, a new ventilator mode is introduced for pediatric patients with acute respiratory distress syndrome (ARDS). Which mode is most likely recommended for a 6-year-old with severe hypoxemia?

- A) Pressure Control Ventilation (PCV)
- B) High-Frequency Oscillatory Ventilation (HFOV)
- C) Airway Pressure Release Ventilation (APRV)
- D) Volume Control Ventilation (VCV)

Correct Answer: B) High-Frequency Oscillatory Ventilation (HFOV)

Rationale: HFOV is preferred in severe pediatric ARDS cases in 2025 due to its ability to improve oxygenation through alveolar recruitment with minimal barotrauma, a key concern in fragile pediatric lungs. PCV and VCV are less effective for severe hypoxemia, and APRV is typically reserved for less acute cases.

Question 2

A 4-year-old admitted on March 11, 2025, presents with tachycardia and poor perfusion. What is the first step in the 2025 CCRN Pediatric protocol?

- A) Administer a fluid bolus
- B) Obtain a 12-lead ECG
- C) Initiate oxygen therapy
- D) Prepare for intubation

Correct Answer: C) Initiate oxygen therapy

Rationale: The 2025 protocol prioritizes oxygenation to ensure adequate tissue perfusion in critically ill pediatric patients before invasive interventions. Fluid bolus follows if hypovolemia is confirmed, while ECG and intubation are secondary steps.

Question 3

Which electrolyte imbalance is most commonly associated with the new 2025 pediatric diabetic ketoacidosis (DKA) management guidelines?

- A) Hyperkalemia
- B) Hypokalemia
- C) Hyponatremia
- D) Hypocalcemia

Correct Answer: B) Hypokalemia

Rationale: The 2025 DKA guidelines emphasize insulin therapy adjustments that can rapidly decrease serum potassium, leading to hypokalemia, a critical focus for monitoring in pediatric patients to prevent arrhythmias.

Question 4

A nurse is caring for a neonate with congenital heart disease in 2025. Which defect is most likely to cause cyanosis at birth?

DOWNLOAD the newest Actual4Labs CCRN-Pediatric PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1oXesjLXs4s53wBPC8vgF_Qx2whG6WU93

You can get 365 days of free CCRN-Pediatric real dumps updates and free demos. Save your time and money. Start AACN CCRN-Pediatric exam preparation with CCRN-Pediatric actual dumps. Our firm provides real, up-to-date, and expert-verified Critical Care Nursing Exam CCRN-Pediatric Exam Questions. We make certain that consumers pass the Critical Care Nursing Exam CCRN-Pediatric certification exam on their first attempt. Furthermore, we want you to trust the Critical Care Nursing Exam CCRN-Pediatric practice questions that we created.

CCRN-Pediatric Test Sample Questions & CCRN-Pediatric Vce Pdf Training & CCRN-Pediatric Valid Test Simulator

Our CCRN-Pediatric simulating materials let the user after learning the section of the new curriculum can through the way to solve the problem to consolidate, and each section between cohesion and is closely linked, for users who use the CCRN-Pediatric exam prep to build a knowledge of logical framework to create a good condition. And our pass rate for CCRN-Pediatric learning guide is high as 98% to 100%, which is also proved the high-quality of our exam products. You can totally rely on our CCRN-Pediatric exam questions.

AACN Critical Care Nursing Exam Sample Questions (Q135-Q140):

NEW QUESTION # 135

A pediatric client is evaluated for a surgery in order to correct Strabismus. During history taking, the nurse learns that the parents had their child examined when they first noticed:

- A. frequent squinting
- B. unusual blinking
- C. excessive tears
- D. bloodshot eyes

Answer: A

Explanation:

Explanation: The classic sign of Strabismus is squinting. It occurs because of the misalignment of the eyes.

NEW QUESTION # 136

A child is receiving succimer (Chemet) for the treatment of lead poisoning. A nurse monitors which of the following most important laboratory results:

- A. blood urea nitrogen level
- B. SGOT and SGPT
- C. serum albumin
- D. red blood cell count

Answer: A

Explanation:

Explanation: A nurse will monitor blood urea nitrogen level. Renal function is monitored closely during the administration of Chelation therapy because the medications are excreted via the kidneys. Although it is important to monitor the red blood cell count for the presence of anemia in a child with lead poisoning, this laboratory result is not specific to chelation therapy. Options A and D are unrelated to the administration of chelation therapy.

NEW QUESTION # 137

An inborn error of metabolism that causes premature destruction of RBC:

- A. Phenylketonuria
- B. G6PD
- C. Celiac Disease
- D. Hemocystinuria

Answer: B

Explanation:

Explanation: G6PD is the premature destruction of RBC when the blood is exposed to antioxidants, legumes and flava beans.

NEW QUESTION # 138

A 16-year-old patient is unresponsive after a motor vehicle collision. The parents speak another language. While performing the secondary survey, what should the nurse do next?

- A. Request a translator from the patient services department
- B. Ask a colleague who is bilingual to question the parents

- C. Ask if either of the parents speak English
- **D. Continue performing the physical assessment**

Answer: D

Explanation:

In a trauma situation, the primary and secondary surveys take precedence to assess life-threatening injuries and prioritize interventions. While a certified interpreter should be used for communication as soon as possible, the nurse should not delay the physical assessment during a critical time.

"The priority in trauma is completion of the primary and secondary assessments. While interpreter use is standard, care must not be delayed in critical evaluations." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Cultural Competence and Emergency Protocols)

NEW QUESTION # 139

How would a nurse soothe an infant who was hospitalized and appears to be in pain:

- **A. holding the infant**
- B. through feeding
- C. eliminating noise
- D. playing a relaxing music

Answer: A

Explanation:

Explanation: Touching the infant while in pain will make him feel secured. This is the best for a distressed infant. Feeding doesn't always comfort an infant.

NEW QUESTION # 140

.....

Maybe you want to get the CCRN-Pediatric certification, but daily work and long-time traffic make you busier to improve yourself. Thanks to our CCRN-Pediatric training materials, you can learn for your certification anytime, everywhere. If you get our products, you will surely find a better self.
