# JN0-481 Exam Quick Prep, JN0-481 Reliable Dumps Ppt

2026 Latest PracticeVCE JN0-481 PDF Dumps and JN0-481 Exam Engine Free Share: https://drive.google.com/open?id=1cexc7T--W20r-bhaoWfDumkdtENkGWQY

Because our JN0-481 practice materials are including the best thinking from upfront experts with experience more than ten years. By using our JN0-481 study guide, your possibility of getting certificate and being success will increase dramatically and a series of benefits will come along in your life. So our JN0-481 real quiz is versatile and accessible to various exam candidates. Just trust us and you can get what you want for sure!

PracticeVCE is a legal authorized company offering the best Juniper JN0-481 test preparation materials. So for some candidates who are not confident for real tests or who have no enough to time to prepare I advise you that purchasing valid and Latest JN0-481 Test Preparation materials will make you half the efforts double the results. Our products help thousands of people pass exams and can help you half the work with double the results.

>> JN0-481 Exam Quick Prep <<

Pass Guaranteed Reliable Juniper - JN0-481 Exam Quick Prep

Knowledge of the JN0-481 study materials contains is very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the JN0-481 study materials. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite JN0-481 Study Materials download. Users can not only learn new knowledge, can also apply theory into the actual problem, but also can leak fill a vacancy, can say such case selection is to meet, so to grasp the opportunity!

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q70-Q75):

NEW QUESTION # 70
Which of the following two statements are correct?

- A. VXLAN is a Layer 2 encapsulation protocol
- B. VXLAN encapsulation discards VNIs
- C. VXLAN encapsulation discards VLAN IDs
- D. VXLAN is a Layer 3 encapsulation protocol

Answer: A,C

NEW QUESTION # 71
How does Intent-Based Analytics align with the principles of intent-based networking in terms of data exploration and analysis?

- A. By predicting future changes in the network environment

- B. By providing real-time weather updates for the data center location
- C. By managing employee property allocations in the data center
- D. By facilitating dynamic queries for intent-based data exploration

Answer: D

NEW QUESTION # 72

Multilenancy for applications is achieved by creating virtual networks (VNs) within which construct?

- A. routing zone
- B. connectivity template
- C. routing table
- D. security policy

Answer: A

Explanation:
A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone.

NEW QUESTION # 73

In the EVPN-VXLAN data center fabric bridged overlay architecture shown in the exhibit, the servers are connected to Lead and Leat6 using the same virtual network identifier (VNI). Which two statements are correct in this scenario? (Choose two.)

- A. The underlay must be provisioned with PIMv2.
- B. Loopback IPv4 addresses must be advertised into the EBGP underlay from leaf and spine devices.
- C. The underlay EBGP peering's must be established between leaf and spine devices.
- D. The underlay must use IRB interfaces.

Answer: B,C

Explanation:
In the EVPN-VXLAN data center fabric bridged overlay architecture shown in the exhibit, the servers are connected to Leaf1 and Leaf6 using the same virtual network identifier (VNI). This means that the servers belong to the same Layer 2 domain and can communicate with each other using VXLAN tunnels across the fabric. The underlay network provides the IP connectivity between the leaf and spine devices, and it uses EBGP as the routing protocol. Therefore, the following two statements are correct in this scenario:
Loopback IPv4 addresses must be advertised into the EBGP underlay from leaf and spine devices. This is because the loopback addresses are used as the source and destination IP addresses for the VXLAN tunnels, and they must be reachable by all the devices in the fabric.
The loopback addresses are also used as the router IDs and the BGP peer addresses for the EBGP sessions.
The underlay EBGP peering's must be established between leaf and spine devices. This is because the EBGP sessions are used to exchange the underlay routing information and the EVPN routes for the overlay network. The EBGP sessions are established using the loopback addresses of the devices, and they follow a spine-and-leaf topology, where each leaf device peers with all the spine devices, and each spine device peers with all the leaf devices.

NEW QUESTION # 74

In the Juniper Apstra Ul, which three resources are assigned under the Resources menu?
(Choose three.)

- A. IP address pools
- B. VTEP pools
- C. logical device pools
- D. ASN pools
- E. VNI pools

Answer: A,D,E

Explanation:
In the Juniper Apstra UI, the Resources menu allows you to create and manage global and local resources that are used for various elements of the network design and configuration. The Resources menu includes the following three types of resources that can be assigned to the network devices and virtual networks:
ASN pools: These are pools of autonomous system numbers (ASNs) that are used for the underlay routing protocol (EBGP) between the leaf and spine devices. You can create ASN pools with either 2-byte or 4-byte ASNs, and assign them to the logical devices in the blueprint. VNI pools: These are pools of virtual network identifiers (VNIs) that are used for the overlay network (VXLAN) between the end hosts. You can create VNI pools with a range of VNIs, and assign them to the virtual networks in the blueprint.
IP address pools: These are pools of IPv4 or IPv6 addresses that are used for various purposes in the network, such as the loopback addresses for the devices, the IP prefixes for the virtual networks, the host IP addresses for the end hosts, and the gateway IP addresses for the IRB interfaces. You can create IP address pools with a range of IP addresses, and assign them to the logical devices and virtual networks in the blueprint.
The following two types of resources are not assigned under the Resources menu:
VTEP pools: These are not resources that can be created or assigned by the user. VTEPs are VXLAN tunnel endpoints that are automatically generated by the Apstra server based on the loopback IP addresses of the devices. VTEPs are used as the source and destination IP addresses for the VXLAN tunnels in the overlay network.
Logical device pools: These are not resources that can be created or assigned by the user.
Logical device pools are groups of logical devices that share the same role, interface map, and resource assignments in the blueprint.
Logical device pools are used to simplify the network design and configuration by applying the same settings to multiple devices.

NEW QUESTION # 75
......

We can claim that the qulity of our JN0-481 exam questions is the best and we are famous as a brand in the market for some advantages. Firstly, the content of our JN0-481 study materials is approved by the most distinguished professionals who are devoting themselves in the field for years. Secondly, our JN0-481 praparation braindumps are revised and updated by our experts on regular basis. With these brilliant features our JN0-481 learning engine is rated as the most worthwhile, informative and high-effective.

JN0-481 Reliable Dumps Ppt: https://www.practicevce.com/Juniper/JN0-481-practice-exam-dumps.html

Juniper JN0-481 Exam Quick Prep In this way, you can easily notice the misunderstanding in the process of reviewing, We can understand your concerns about the JN0-481 exam dumps, The Channel Partner Program Data Center, Specialist (JNCIS-DC) JN0-481 certification is a valuable credential earned by individuals to validate their skills and competence to perform certain job tasks, We are glad to receive all your questions on our JN0-481 exam dumps.

The version of test engine is a simulation of the JN0-481 braindump actual test, you can feel the atmosphere of Juniper JN0-481 test exam and get used to the condition of the real test in advance.

Quiz JN0-481 - Data Center, Specialist (JNCIS-DC) Marvelous Exam Quick Prep

In the rapid development of modern society, having a professional skill is a necessary condition for success (JN0-481 Practice Braindumps), In this way, you can easily notice the misunderstanding in the process of reviewing.

We can understand your concerns about the JN0-481 exam dumps, The Channel Partner Program Data Center, Specialist (JNCIS-DC) JN0-481 certification is a valuable credential earned by JN0-481 individuals to validate their skills and competence to perform certain job tasks.

We are glad to receive all your questions on our JN0-481 exam dumps, PracticeVCE is considered as the top preparation material seller for JN0-481 exam dumps, and inevitable to carry you the finest knowledge on JN0-481 exam certification syllabus contents.
