Guaranteed ISACA AAISM Questions Answers & AAISM Reliable Test Online

If you are quite nervous about the exam, and by chance, you are going to attend the AAISM exam, then choose the product of our company, because the product of our company will offer you the most real environment for the AAISM exam, with this it can relieve your nerves while attending the AAISM exam,as well as strengen your confidence. Besides the product of our company also provide you plenty of practice materials for you to practice with questionns and answers, it will help you to master the key knowledge points as quickly as possible. If you choose the product of our company, passing the AAISM Exam won't be a dream.

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our AAISM actual exam can help you out. Our AAISM learning guide always boast a pass rate as high as 98% to 100%, which is unique and unmatched in the market. Using our AAISM Study Materials can also save your time in the exam preparation for the content is all the keypoints covered.

>> Guaranteed ISACA AAISM Questions Answers <<

Quick and Easiest Way of Getting AAISM ISACA Advanced in AI Security Management (AAISM) Exam Certification Exam

Firmly believe in an idea, the AAISM exam questions are as long as the candidates to follow our steps, follow our curriculum requirements, they can be good to achieve their goals, to obtain the qualification AAISM certificate of the target easily and soothly. For we have been in this career for years, we dare to say that no body can know the exam questions and answers better than our professionals. And our pass rate of our AAISM Study Materials is high as 98% to 100%!

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q161-Q166):

NEW QUESTION # 161

Which of the following AI system vulnerabilities is MOST easily exploited by adversaries?

- A. Weak controls for access to the AI model
- B. Lack of protection against denial of service (DoS) attacks
- C. Inaccurate generalizations from new data by the AI model
- D. Inability to detect input modifications causing inappropriate AI outputs

Answer: A

Explanation:
AAISM study materials stress that weak access controls are the most easily exploited vulnerability in AI systems. Without strong access restrictions, adversaries can directly query, extract, manipulate, or overload models, leading to data leakage or compromised outputs. While inaccurate generalizations, DoS vulnerabilities, or susceptibility to input manipulation are serious, they typically require more effort or specific conditions. Weak access control provides the most direct and immediate entry point for attackers. As such, it is identified as the most easily exploited vulnerability.

NEW QUESTION # 162
A SaaS-based LLM system has risks including prompt injection, data poisoning, and model exfiltration. What is the BEST way to ensure consistent risk treatment?

- A. Rely on vendor audit reports and SLAs
- B. Implement an AI threat control matrix mapping threats to controls and assurance
- C. Focus on post-deployment red teaming
- D. Apply control baselines from a recognized industry standard

Answer: B

Explanation:
AAISM highlights the importance of an AI threat-control matrix that:
* maps threats (e.g., poisoning, exfiltration, injection)
* identifies required controls
* defines assurance/testing activities
* ensures consistent coverage across all AI components
Control baselines (A) are useful but not AI-specific. Red teaming (C) is reactive and not comprehensive.
Vendor reports (D) are supplemental, not sufficient.
References: AAISM Study Guide - AI Risk Treatment; Threat-Control Mapping.

NEW QUESTION # 163
For a life insurance company deploying AI for fraud detection, which factor is MOST critical?

- A. Adaptability
- B. Accuracy
- C. Explainability
- D. Robustness

Answer: D

Explanation:
AAISM emphasizes robustness as the key requirement for fraud-detection systems because they must resist adversarial manipulation, data poisoning, spoofing, and input tampering.
Accuracy (B) matters but does not protect against adversarial attacks. Explainability (C) is important but secondary. Adaptability (D) is useful but not the top security requirement.
References: AAISM Study Guide - AI Robustness; Fraud Detection and Adversarial Resistance.

NEW QUESTION # 164

Which of the following is the GREATEST risk inherent to implementing generative AI?

- A. Unidentified asset vulnerabilities
- B. Inadequate return on investment (ROI)
- C. Potential intellectual property violations
- D. Lack of employee training

Answer: C

Explanation:
The AAISM framework identifies intellectual property (IP) violations as the most significant inherent risk in deploying generative AI. These systems often rely on large-scale internet data for training, which may inadvertently contain copyrighted or proprietary material. This creates legal and reputational exposure when outputs reproduce or reference protected content. While employee training gaps, asset vulnerabilities, and ROI concerns are relevant risks, they are not inherent to generative models themselves. The greatest inherent risk tied directly to generative AI adoption is the possibility of violating intellectual property rights.

NEW QUESTION # 165
Which of the following is the BEST way to ensure role clarity and staff effectiveness when implementing AI- assisted security monitoring tools?

- A. Defer implementation until the security team can be expanded with data scientists.
- B. Increase training budgets for business staff to obtain vendor-neutral AI certifications.
- C. Transition responsibilities for AI tools to external consultants for improved scalability.
- D. Update the security program to include cross-functional AI-specific responsibilities.

Answer: D

Explanation:
AAISM directs that AI adoption in security operations be governed through explicit operating models and RACI-mapped responsibilities spanning security operations, data science/ML, platform engineering, privacy, and compliance. Role clarity comes from updating the security program to codify AI-specific responsibilities (model monitoring, incident handling for AI failures, data governance, change control for models, bias/fairness reviews, supplier assurance) rather than deferring implementation, outsourcing core accountability, or relying on generic certifications. This ensures measurable accountability, reduces hand-off risk, and aligns day-to-day SOC practices with AI control objectives.
