Splunk Enterprise Certified Admin Sample Questions (Q158-Q163):

NEW QUESTION # 158
Which of the following authentication types requires scripting in Splunk?

- A. SAML
- B. LDAP
- C. RADIUS
- D. ADFS

Answer: C

Explanation:

Explanation/Reference: https://answers.splunk.com/answers/131127/scripted-authentication.html

NEW QUESTION # 159
What is a role in Splunk? (select all that apply)

- A. A classification that determines if a Splunk server can remotely control another Splunk server.
- B. A classification that determines what capabilities a user has.
- C. A classification that determines what indexes a user can search.
- D. A classification that determines what functions a Splunk server controls.

Answer: B,C

Explanation:
A role in Splunk is a classification that determines what capabilities and indexes a user has. A capability is a permission to perform a specific action or access a specific feature on the Splunk platform1. An index is a collection of data that Splunk software processes and stores2. By assigning roles to users, you can control what they can do and what data they can access on the Splunk platform. Therefore, the correct answers are A and D. A role in Splunk determines what capabilities and indexes a user has. Option B is incorrect because Splunk servers do not use roles to remotely control each other. Option C is incorrect because Splunk servers use instances and components to determine what functions they control3.

NEW QUESTION # 160
How does the Monitoring Console monitor forwarders?

- A. By pulling internal logs from forwarders.
- B. By using the forwarder monitoring add-on.
- C. With internal logs forwarded by forwarders.
- D. With internal logs forwarder by deployment server.

Answer: A

NEW QUESTION # 161
Which option on the Add Data menu is most useful for testing data ingestion without creating inputs.conf?

- A. Monitor option
- B. Forward option
- C. Upload option
- D. Download option

Answer: C

NEW QUESTION # 162
A non-clustered Splunk environment has three indexers (A,B,C) and two search heads (X, Y). During a search executed on search head X, indexer A crashes. What is Splunk's response?

- A. Inform the user in Splunk web that their results may be incomplete and have them attempt the search from search head Y.
- B. Repeat the search request on indexer B without informing the user.
- C. Update the user in Splunk web that their results may be incomple and that Splunk will try to re-execute the search.
- D. Update the user in Splunk web informing them that the results of their search may be incomplete.

Answer: D

Explanation:
This is explained in the Splunk documentation1, which states:
If an indexer goes down during a search, the search head notifies you that the results might be incomplete. The search head does not attempt to re-run the search on another indexer.

NEW QUESTION # 163

......

Using an updated Splunk Enterprise Certified Admin (SPLK-1003) exam dumps is necessary to get success on the first attempt. So, it is very important to choose a Splunk SPLK-1003 exam prep material that helps you to practice actual Splunk SPLK-1003 Questions.
