Fortinet EMEA-Advanced-Support Reliable Exam Registration, Online EMEA-Advanced-Support Training

You must believe that you have extraordinary ability to work and have an international certificate to prove your inner strength. You will definitely be the best one among your colleagues. The help you provide with our EMEA-Advanced-Support Learning Materials is definitely what you really need. And if you study with our EMEA-Advanced-Support exam braindumps, you will know your dream clearly. Join EMEA-Advanced-Support study guide and you will be the best person!

Fortinet EMEA Advanced Support Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which FortiGate feature mitigates DDoS attacks by limiting the rate of incoming connections?

- A. IPS Signature
- B. DoS Policy
- C. Application Control
- D. Web Filtering

Answer: B

Explanation:

FortiGate's DoS (Denial of Service) Policy limits the rate of incoming connections or packets to mitigate DDoS attacks, such as SYN floods, by setting thresholds for specific traffic types. IPS Signatures (B) detect specific attack patterns, Application Control (C) manages app usage, and Web Filtering (D) blocks URLs, none of which focus on rate limiting. Exact extract: "DoS policies protect against DDoS attacks by limiting the rate of incoming connections or packets, such as SYN floods, based on configured thresholds."

NEW QUESTION # 50

How does a stateful firewall control a TCP session?

- A. TCP ack numbers are used to control the session
- B. TCP source ports are used to control the session
- C. TCP destination ports are used to control the session
- D. TCP sequence numbers and TCP flags are used to control the session

Answer: D

Explanation:

A stateful firewall, like FortiGate, tracks TCP sessions by maintaining a state table that includes TCP sequence numbers and flags (e.g., SYN, ACK, FIN) to monitor the connection's lifecycle (establishment, data transfer, termination). This ensures proper session handling, detecting out-of-order packets or invalid states.

Source and destination ports identify the session but don't control its state, and ACK numbers alone are insufficient. Exact extract: "Stateful inspection tracks TCP sessions using sequence numbers and TCP flags (SYN, ACK, FIN, etc.) to ensure packets are valid and part of an established session... FortiGate maintains a state table to monitor the TCP connection states."

NEW QUESTION # 51

Which FortiGate command displays the current routing table?

- A. diagnose netlink route list
- B. get router info routing-table all
- C. get system route
- D. show router status

Answer: B

Explanation:

The 'get router info routing-table all' command displays the FortiGate's current routing table, including all active routes and their details. Options B, C, and D are not valid or specific for this purpose. Exact extract:

"Use 'get router info routing-table all' to display the complete routing table, showing destination, gateway, interface, and metric for all routes."

NEW QUESTION # 52

Which FortiGate feature allows for dynamic routing protocol updates to be propagated through an IPsec VPN tunnel?

- A. Dynamic Routing Gateway
- B. Auto Discovery VPN (ADVPN)
- C. Route-based VPN
- D. Virtual Routing and Forwarding (VRF)

Answer: B

Explanation:

Auto Discovery VPN (ADVPN) in FortiGate enables dynamic routing protocols (e.g., OSPF, BGP) to propagate updates through IPsec VPN tunnels by automatically creating shortcut paths between spokes. This simplifies configuration and enhances scalability in hub-and-spoke topologies. Route-based VPN (D) supports routing but not dynamic discovery, VRF (C) is for segmentation, and Dynamic Routing Gateway (B) is not a standard Fortinet feature. Exact extract: "ADVPN allows dynamic routing protocols to be used over IPsec VPN tunnels, enabling spokes to discover and communicate directly via shortcuts, improving efficiency in hub-and-spoke setups."

NEW QUESTION # 53

In Active FTP who sends the PORT command?

- A. The FTP Server
- B. There is no PORT command in Active FTP
- C. Both
- D. The FTP Client

Answer: D

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

NEW QUESTION # 54

.....

The three formats of Fortinet EMEA-Advanced-Support practice material that we have discussed above are created after receiving feedback from thousands of professionals around the world. You can instantly download the Fortinet EMEA-Advanced-Support Real Questions of the Real4exams right after the payment. We also offer our clients free demo version to evaluate the of our Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) valid exam dumps before purchasing.
