Quiz 2026 Newest The Open Group OGEA-103: TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Valid Braindumps Ppt

The price of our OGEA-103 study quiz is very reasonably, so we do not overcharge you at all. compared with the prices of the other providers', you will find that our price of OGEA-103 exam dumps is quite favourable. Meanwhile, our OGEA-103 Training Materials are demonstrably high effective to help you get the essence of the knowledge which was convoluted. You will find that passing the OGEA-103 exam is as easy as pie.

The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68
Refer to the table below:

Phase	Output & Outcome	Essential Knowledge
?	Completion of the projects to implement the changes necessary to reach the adjusted target state.	Purpose and constraints on the implementation team. (Gap, Architecture Requirement Specification, Control) How stakeholder priority and preference adjust in response to success, value, effort, and risk of change. (Stakeholder Requirements)

Which ADM Phase does this describe?

- A. Phase A
- B. Phase G
- C. Phase F
- D. Phase E

Answer: B

Explanation:
The table describes the output, outcome, and essential knowledge of an ADM phase that oversees the implementation of changes necessary to reach the adjusted target state. This corresponds to Phase G, also known as Implementation Governance, which ensures that the architecture defined in earlier phases is realized, and it oversees the development and implementation of projects to align with this architecture. The essential knowledge required during this phase includes understanding constraints on the implementation team and adjusting stakeholder priority and preference in response to success, value, effort, and risk of change. Reference: TOGAF Version 9.1 - 1

NEW QUESTION # 69
What can be introduced to formalize a joint agreement between development partners and sponsors on the deliverables, quality, and fitness-for-purpose of an architecture?

- A. Non-disclosure Agreement
- B. The Statement of Architecture Work
- C. Architecture Contracts
- D. Service Level Agreements

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation from Expert in Enterprise Architecture, guiding in TOGAF and ArchiMate:
In TOGAF, Architecture Contracts are the formal mechanisms used to define and govern agreements between:
Architecture functions and implementation teams, or
Sponsoring organizations and development partners
Architecture Contracts specify:
Architecture deliverables

Quality criteria and fitness-for-purpose
Roles, responsibilities, and compliance requirements
Governance checkpoints and consequences of non-compliance
Why Option D is correct:
Architecture Contracts explicitly exist to formalize joint agreements regarding architecture outcomes and quality.
Why the other options are incorrect:
A . Service Level Agreements: Focus on operational service performance, not architecture governance.
B . Non-disclosure Agreement: Addresses confidentiality, not architecture deliverables or quality.
C . The Statement of Architecture Work: Defines scope and approach but is not a mutual governance contract.

NEW QUESTION # 70
What are the four architecture domains that the TOGAF standard deals with?

- A. Application, Data, Information, Knowledge
- B. Business, Data, Application, Technology
- C. Baseline, Candidate, Transition, Target
- D. Capability, Segment, Enterprise, Federated

Answer: B

Explanation:
The TOGAF standard divides Enterprise Architecture into four primary architecture domains: business, data, application, and technology. These domains represent different aspects of an enterprise and how they relate to each other. The business domain defines the business strategy, governance, organization, and key business processes. The data domain describes the structure of the logical and physical data assets and data management resources. The application domain provides a blueprint for the individual applications to be deployed, their interactions, and their relationships to the core business processes. The technology domain describes the logical software and hardware capabilities that are required to support the deployment of business, data, and application services. Other domains, such as motivation, security, or governance, may span across these four primary domains.

NEW QUESTION # 71
Consider the following statements:
1. Each contracted party is required to act responsibly to the organization and its stakeholders.
2. All decisions taken, processes used, and their implementation will not be allowed to create unfair advantage to any one particular party.
3. Digital Transformation and operations will be more effective and efficient.
4. Strategic decision-making by C-Level executives and business leaders will be more effective.
Which statements highlight the value and necessity for Architecture Governance to be adopted within organizations?

- A. 1 & 2
- B. 1 & 4
- C. 2 & 3
- D. 3 & 4

Answer: A

Explanation:
Architecture governance is the practice of ensuring compliance with the enterprise architecture and its principles, standards, and goals. Architecture governance provides the means to establish, monitor, and control the architecture development and implementation processes, and to resolve any issues or conflicts that may arise. Architecture governance also ensures that all stakeholders are represented and involved in the decision-making process, and that their interests and concerns are balanced and aligned. Statements 1 and 2 highlight the value and necessity for architecture governance to be adopted within organizations, as they emphasize the importance of responsibility, accountability, fairness, and transparency in the architectural activities. Statements 3 and 4 are more related to the benefits and outcomes of having a good enterprise architecture, rather than the governance

NEW QUESTION # 72

Which of the following is the ability to develop use and sustain the architecture of a particular enterprise using architecture to govern change?

- A. An Enterprise Architecture
- B. An EA repository
- C. An EA framework
- D. An EA Capability

Answer: D

Explanation:
The ability to develop, use, and sustain the architecture of a particular enterprise using architecture to govern change is an EA Capability. An EA Capability is a set of skills, processes, roles, responsibilities, tools, and techniques that enable an enterprise to successfully develop and maintain its Enterprise Architecture and achieve its desired outcomes. An EA Capability is part of an enterprise's overall capability portfolio and should be aligned with its strategy and objectives.
