Salesforce Certified MuleSoft Associate Sample Questions (Q31-Q36):

NEW QUESTION # 31

In preparation for a digital transformation initiative an organization is reviewing related IT integration projects that failed for various reasons. According to MuleSoft's surveys of global IT leaders, what is a common cause of IT project failure that this organization may likely discover in its assessment?

- A. Reliance on an Integration-Platform-as-a-Service (iPaaS)
- B. Spending too much time on enablement
- C. Following an Agile delivery methodology
- **D. Lack of alignment around business outcomes**

Answer: D

Explanation:

One common cause of IT project failure identified by MuleSoft's surveys of global IT leaders is the lack of alignment around business outcomes. Here's a detailed explanation:

Lack of Alignment:

Definition: This occurs when IT projects are not clearly linked to the organization's strategic goals and business objectives.

Impact: Misalignment can lead to projects that do not deliver the intended business value, resulting in wasted resources and failed initiatives.

Common Causes:

Poor Communication: Lack of effective communication between business stakeholders and IT teams can lead to misunderstandings and misaligned priorities.

Undefined Objectives: Projects without clearly defined business outcomes and success metrics struggle to demonstrate value and justify investments.

Solution:

Business-IT Collaboration: Foster strong collaboration between business and IT to ensure projects are aligned with strategic goals.

Outcome-Focused Planning: Define clear business outcomes and success criteria at the outset of each project.

NEW QUESTION # 32

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user. Which Anypoint Platform component should the administrator use to obtain this information?

- A. Anypoint Monitoring
- B. Mule Stack Traces
- C. Anypoint Studio
- **D. Audit Logging**

Answer: D

Explanation:

Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:

Audit Logging:

Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.

Access: Administrators can access audit logs through the Anypoint Platform's management console.

Information Captured:

User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.

Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.

Use Case:

Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.

NEW QUESTION # 33

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. API Spec Fragments
- B. Connectors
- C. SOAP APIs
- **D. REST APIs**

Answer: D

Explanation:

In Anypoint Exchange, a REST API asset represents a complete API specification in RAML (RESTful API Modeling Language) or OAS (OpenAPI Specification) format. Here's a detailed explanation:

REST APIs:

Definition: REST APIs are application programming interfaces that adhere to the principles of REST, allowing interaction with RESTful web services.

Specifications: Typically defined using RAML or OAS to describe the API's endpoints, methods, request/response structures, and security protocols.

Asset Types in Anypoint Exchange:

REST APIs: Represent the full API specification, including all necessary details for developers to understand and use the API.

SOAP APIs: Define APIs following the SOAP protocol, often using WSDL.

Connectors: Provide pre-built connectivity to various systems and services.

API Spec Fragments: Reusable pieces of an API specification, such as data types or security schemes, that can be included in full API specifications.

Usage:

Discoverability: Developers can easily discover, review, and reuse these API specifications in their projects.

Documentation: Provides comprehensive documentation generated from the API specification, ensuring consistency and clarity.

RAML and OAS: RAML, OpenAPI

NEW QUESTION # 34

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

Which type of communication management does a service mesh typically perform in this architecture?

- **A. Between services within the application**
- B. Between the application and external API clients
- C. Between application services and the firewall
- D. Between the application and external API implementations

Answer: A

Explanation:

A service mesh is typically used to manage communication between microservices within a distributed application. Here's a detailed explanation:

Service Mesh:

Definition: A service mesh is a dedicated infrastructure layer that manages service-to-service communication within a microservices architecture.

Features: Provides features such as load balancing, service discovery, traffic management, and security (e.g., mutual TLS).

Intra-Application Communication:

Focus: It focuses on internal communication between microservices, ensuring reliability, security, and observability of inter-service communications.

Management: Handles retries, circuit breaking, and service-to-service authentication transparently.

API Gateway:

Complementary Role: While a service mesh manages internal microservice communications, an API gateway manages external client requests and provides a single entry point for external API clients.

Service Mesh Overview: What is a Service Mesh?

NEW QUESTION # 35

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- **B. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- C. Switch from a design-first to a code-first approach for IT development
- D. Hire more IT developers, architects, and project managers to increase IT delivery

Answer: B

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.

Here's a detailed explanation:

Decoupling Core IT Projects:

Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

Benefits:

Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

Implementation:

API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

Outcome:

Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.
