

# Desktop-Based CompTIA XK0-005 Practice Exam Software

P.S. Free 2026 CompTIA XK0-005 dumps are available on Google Drive shared by Pass4SureQuiz:  
[https://drive.google.com/open?id=13SzL\\_1jpySP6U-JQSSo1U8gFEE7B614](https://drive.google.com/open?id=13SzL_1jpySP6U-JQSSo1U8gFEE7B614)

Candidates can also check the explanations for the answers to have more understanding of the CompTIA XK0-005 questions that are asked on the XK0-005 practice test by Pass4SureQuiz. You can customize the CompTIA XK0-005 exam questions and time for the XK0-005 practice exam on the software. Assessing their CompTIA XK0-005 Exam Preparation and speed on the practice exam software helps candidates in making required improvements and succeeding at the CompTIA XK0-005 exam. The software by Pass4SureQuiz gives the candidates the results and progress reports to help them monitor their performance for the CompTIA XK0-005 exam.

CompTIA XK0-005, also known as the CompTIA Linux+ certification exam, is a globally recognized credential for IT professionals seeking to demonstrate their expertise in Linux-based operating systems. CompTIA Linux+ Certification Exam certification is vendor-neutral, which means that it is not tied to any specific Linux distribution, making it a valuable asset for Linux administrators and technicians across various industries.

CompTIA XK0-005 Exam is a relatively new certification, having been introduced in 2019 to replace the previous CompTIA Linux+ exam. The new exam has been updated to reflect the latest industry trends and technologies, including cloud computing, virtualization, and containers. It also includes a greater emphasis on security, reflecting the growing importance of cybersecurity in today's digital landscape.

## XK0-005 Testking Exam Questions & Test XK0-005 Simulator Online

When you decide to pass XK0-005 exam, you must want to find a good study materials to help you prepare for your exam. If you decide to choose our products as your study tool, you will be easier to pass your exam and get the XK0-005 certification in the shortest time. So do not hesitate and buy our XK0-005 Test Torrent, an unexpected surprise is awaiting you, we believe you will prefer to our XK0-005 test questions than other study materials. In order to let you understand our XK0-005 exam prep in detail, we are going to introduce our products to you.

CompTIA XK0-005, also known as the CompTIA Linux+ Certification Exam, is a globally recognized certification that validates the skills and knowledge required to become a Linux system administrator. XK0-005 Exam is designed to test the candidate's ability to install, configure, manage, and troubleshoot Linux systems. CompTIA Linux+ Certification Exam certification is vendor-neutral, which means that it is not tied to any specific Linux distribution, and it is recognized by various organizations and companies around the world.

## CompTIA Linux+ Certification Exam Sample Questions (Q243-Q248):

### NEW QUESTION # 243

A user is unable to remotely log on to a server using the server name `server1` and port 22. The Linux engineer troubleshoots the

issue and gathers the following information:  
Which of the following is most likely causing the issue?

- A. sshd is running on a non-standard port.
- B. sshd is not an active service.
- C. server 1 is not in the DNS.
- D. server1 is using an incorrect IP address.

**Answer: A**

Explanation:

Explanation

The sshd is the Secure Shell Daemon, which is a service that allows remote login to a Linux system using the SSH protocol. The output shows that the sshd is running on port 2222, which is a non-standard port for SSH.

The default port for SSH is 22, which is what the user is trying to use. Therefore, the statement B is most likely causing the issue.

The statements A, C, and D are incorrect because they do not explain why the user cannot log on using port 22. References: [How to Change SSH Port in Linux]

#### NEW QUESTION # 244

A Linux administrator logs in to a system and identifies that an important backup has been started. The backup process is consuming a considerable amount of CPU time but needs to continue. Which of the following should the administrator use to reduce the impact this process has on other services?

- A. renice -n 15 -p
- B. nice -n -15 -p
- C. renice -n -15 -p
- D. nice -n 15 -p

**Answer: A**

Explanation:

The renice command changes the scheduling priority of a running process. By using renice -n 15, the administrator lowers the priority of the backup process, making it less CPU-intensive and reducing its impact on other system services. A positive niceness value (e.g., 15) lowers the priority, allowing other processes to receive more CPU time.

#### NEW QUESTION # 245

A Linux engineer is removing a previously created firewall rule. Which of the following commands will help the administrator accomplish this task?

- A. delete7!
- B. ufw delete 80/tcp
- C. ufw delete deny 80/tcp
- D. ufw delete 80/tcp deny

**Answer: C**

Explanation:

The ufw (Uncomplicated Firewall) delete command is used to remove rules. If the original rule was ufw deny 80/tcp, it must be deleted with: ufw delete deny 80/tcp

#### NEW QUESTION # 246

A Linux systems administrator wants to see the current processes that are being run by each individual user who is logged on to the server.

Which of the following is the BEST way to gather this information?

- A. which
- B. wall
- C. watch

- D. who
- E. w

**Answer: B**

#### NEW QUESTION # 247

A junior administrator is trying to set up a passwordless SSH connection to one of the servers. The administrator follows the instructions and puts the key in the `authorized_key` file at the server, but the administrator is still asked to provide a password during the connection.

Given the following output:

```
junior@server:~$ ls -lh .ssh/author*
-rw----- 1 junior junior 566 Sep 13 20:56 .ssh/authorized_key
```

Which of the following commands would resolve the issue and allow an SSH connection to be established without a password?

- A. `mv .ssh/authorized_key .ssh/authorized_keys`
- B. `chmod 600 mv .ssh/authorized_key`
- C. `systemctl restart sshd.service`
- D. `restorecon -rv .ssh/authorized_key`

**Answer: A**

Explanation:

Explanation

The command `mv .ssh/authorized_key .ssh/authorized_keys` will resolve the issue and allow an SSH connection to be established without a password. The issue is caused by the incorrect file name of the authorized key file on the server. The file should be named `authorized_keys`, not `authorized_key`.

The `mv` command will rename the file and fix the issue. The other options are incorrect because they either do not affect the file name (`restorecon` or `chmod`) or do not restart the SSH service (`systemctl`).
