2026 Perfect Amazon SOA-C02: Updated AWS Certified SysOps Administrator - Associate (SOA-C02) Dumps

TrainingDump aims to assist its clients in making them capable of passing the Amazon SOA-C02 certification exam with flying

colors. It fulfills its mission by giving them an entirely free AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the Amazon SOA-C02 study material.

Amazon SOA-C02 Exam is a certification exam offered by Amazon Web Services (AWS) for IT professionals who are interested in becoming certified as an AWS Certified SysOps Administrator - Associate. AWS Certified SysOps Administrator - Associate (SOA-C02) certification is designed to demonstrate that the candidate has a broad understanding of the AWS platform, as well as a deep understanding of the underlying principles and concepts of AWS services.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q307-Q312):

NEW QUESTION # 307

A SysOps administrator has an AWS CloudFormation template of the company's existing infrastructure in us-west-2. The administrator attempts to use the template to launch a new stack in eu-west-1, but the stack only partially deploys, receives an error message, and then rolls back.

Why would this template fail to deploy? (Choose two.)

- A. The template requested services that do not exist in eu-west-1.
- B. CloudFormation templates can be used only to update existing services.
- C. The template referenced an Amazon Machine Image (AMI) that is not available in eu-west-1.
- D. The template did not have the proper level of permissions to deploy the resources.
- E. The template referenced an IAM user that is not available in eu-west-1.

Answer: A,C

Explanation:

<https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/troubleshooting.html#troubleshooting-errors>

NEW QUESTION # 308

A company hosts an application on Amazon EC2 instances. The instances are in an Amazon EC2 Auto Scaling group that uses a launch template. The amount of application traffic changes throughout the day. Scaling events happen frequently.

A SysOps administrator needs to help developers troubleshoot the application. When a scaling event removes an instance, EC2 Auto Scaling terminates the instance before the developers can log in to the instance to diagnose issues.

Which solution will prevent termination of the instance so that the developers can log in to the instance?

- A. Use Amazon GuardDuty to configure rules to protect the instances from termination.
- B. Use Amazon Inspector to configure a rules package to protect the instances from termination.
- C. Update the Auto Scaling group by enabling instance scale-in protection for newly launched instances.
- D. Ensure that the Delete on termination setting is turned off in the UserData section of the launch template.

Answer: C

Explanation:

Enabling Instance Scale-In Protection:

* Instance scale-in protection prevents Auto Scaling from terminating specific instances.

* Steps:

* Go to the AWS Management Console.

* Navigate to EC2 and select "Auto Scaling Groups."

* Select your Auto Scaling group.

* Go to the "Instance management" tab.

* Select the instances you want to protect and click "Actions."

* Choose "Enable scale-in protection."

* This ensures that instances are not terminated during troubleshooting.: Instance Scale-In Protection

NEW QUESTION # 309

A company stores critical data in Amazon S3 buckets. A SysOps administrator must build a solution to record all S3 API activity. Which action will meet this requirement?

- A. Create an AWS CloudTrail trail to log data events for all S3 objects.
- B. Configure S3 bucket metrics to record object access logs.
- C. Enable S3 server access logging for each S3 bucket.
- D. Use AWS IAM Access Analyzer for Amazon S3 to store object access logs.

Answer: A

Explanation:

Amazon S3 is integrated with AWS CloudTrail, a service that provides a record of actions taken by a user, role, or an AWS service in Amazon S3. CloudTrail captures a subset of API calls for Amazon S3 as events, including calls from the Amazon S3 console and code calls to the Amazon S3 APIs.

<https://docs.aws.amazon.com/AmazonS3/latest/userguide/cloudtrail-logging.html>

NEW QUESTION # 310

A SysOps administrator is optimizing the cost of a workload. The workload is running in multiple AWS Regions and is using AWS Lambda with Amazon EC2 On-Demand Instances for the compute. The overall usage is predictable. The amount of compute that is consumed in each Region varies, depending on the users' locations.

Which approach should the SysOps administrator use to optimize this workload?

- A. Purchase Standard Reserved Instances by calculating the usage baseline.
- B. Purchase Compute Savings Plans based on the usage during the past 30 days
- C. Purchase Convertible Reserved Instances by calculating the usage baseline.
- D. Purchase EC2 Instance Savings Plane based on the usage during the past 30 days

Answer: B

NEW QUESTION # 311

A company has an application that runs on Amazon EC2 instances. The application stores data on an Amazon RDS for MySQL Single-AZ DB instance.

Requests to the DB instance from the application include reads and writes.

A SysOps administrator must implement a solution that provides failover for the DB instance. The solution must minimize application downtime.

Which solution will meet these requirements?

- A. Add a read replica in the same Availability Zone where the DB instance is deployed.
- B. Add the DB instance to an Auto Scaling group that has a minimum capacity of 2 and a desired capacity of 2.
- C. Use RDS Proxy to configure a proxy in front of the DB instance.
- D. Modify the DB instance to be a Multi-AZ DB instance deployment.

Answer: D

Explanation:

Upgrading the DB instance to a Multi-AZ deployment ensures that a synchronous standby is maintained in another Availability Zone. In the event of a failure, RDS automatically fails over to the standby instance, minimizing downtime and ensuring high availability for the application.
