

# Professional Exam 2V0-15.25 Cost & Leading Offer in Qualification Exams & Free Download VMware VMware Cloud Foundation 9.0 Support

Generally speaking, a satisfactory 2V0-15.25 study material should include the following traits. High quality and accuracy rate with reliable services from beginning to end. As the most professional group to compile the content according to the newest information, our 2V0-15.25 Practice Questions contain them all, and in order to generate a concrete transaction between us we take pleasure in making you a detailed introduction of our 2V0-15.25 exam materials.

## VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li></ul>

## Reliable Exam 2V0-15.25 Cost Covers the Entire Syllabus of 2V0-15.25

Compared with other education platform on the market, TroytecDumps is more reliable and highly efficiently. It provide candidates who want to pass the 2V0-15.25 exam with high pass rate 2V0-15.25 study materials, all customers have passed the 2V0-15.25 Exam in their first attempt. They all need 20-30 hours to learn on our website can pass the 2V0-15.25 exam. It is really a high efficiently exam tool that can help you save much time and energy to do other things.

## VMware Cloud Foundation 9.0 Support Sample Questions (Q32-Q37):

### NEW QUESTION # 32

An administrator is troubleshooting a vSAN issue. As part of the initial investigation, the following observations were identified:

- \* vSAN cluster capacity is decreased.
- \* Some virtual machine components are marked as degraded.
- \* Component rebuild process started automatically.

What is the cause of this issue?

- A. vSAN license capacity is too small.
- **B. Physical disk failure.**
- C. VM migration to another cluster is in progress.
- D. Too many virtual machines were created in the vSAN cluster.

### Answer: B

Explanation:

The symptoms described-reduced cluster capacity, degraded virtual machine components, and automatic component rebuild operations-are classic indicators of a vSAN disk failure or disk group degradation.

vSAN continuously monitors the health of disks, disk groups, and network paths. When a physical disk or disk group becomes unavailable, vSAN will:

- \* Mark affected components as degraded because the required number of replicas or witnesses cannot be maintained.
- \* Trigger automatic repair/rebuild operations, provided there are enough healthy disks remaining in the cluster to satisfy the storage policy (e.g., FTT=1, RAID1/5/6).

\* Reduce available storage capacity because the failed device is removed from contributing to the vSAN datastore.

These behaviors align directly with documented vSAN failure-response logic, which states that component rebuilds begin automatically after a disk failure, assuming the cluster still has adequate resources.

The other options do not match the symptoms:

- \* A. VM migration to another cluster# does not reduce vSAN capacity nor trigger component rebuilds.
- \* B. vSAN license capacity too small# restricts features, not component state or capacity changes.
- \* C. Too many VMs created# may cause capacity pressure but does not mark components degraded or trigger automated rebuilds. Only physical disk failure accurately explains all three observations simultaneously.

### NEW QUESTION # 33

The administrator has to change the DRS automation level in preparation to upgrade the vCenter. When making this change through VCF Operations, the following error occurs: 'Internal Error: Failed to retrieve vim client'.

What is the possible cause of this error?

- **A. Connectivity issue between vCenter and VCF Operations.**
- B. The vCenter is overloaded with API requests from VCF Operations.
- C. Insufficient licensing for the advanced vCenter features.
- D. DRS Automation is already set on the vSphere Client.

### Answer: A

Explanation:

The error:

"Internal Error: Failed to retrieve vim client"

occurs when VCF Operations cannot establish a functional API session with vCenter. The vim client is the internal vSphere API client library used by VCF Operations to perform cluster actions such as modifying DRS settings, powering on/off workloads, or retrieving

inventory.

When this error appears, VMware documentation identifies these common root causes:

- \* Loss of connectivity between VCF Operations and vCenter
- \* DNS resolution issues
- \* Network interruption
- \* Stale or expired authentication tokens
- \* Credential mismatchIf the vCenter password was changed manually, VCF Operations may be unable to authenticate.
- \* vCenter services restarting or unavailableIf vCenter backend services (vpdx, sts, etc.) are unstable, VCF Operations cannot establish a vim session.

Option A is incorrect-DRS automation state in the vSphere Client does not cause vim client retrieval errors.

Option B (vCenter overloaded by API requests) would cause timeouts, not a vim client initialization failure.

Option D (insufficient licensing) affects feature use, not API connectivity.

#### **NEW QUESTION # 34**

An administrator has successfully deployed and configured the Application Monitoring Telegraf Agent to 30 virtual machines through VMware Cloud Foundation (VCF) Operations.

After 24 hours, the administrator is alerted to the fact that no additional data has been collected since the agents were deployed on the virtual machines.

What could be the possible cause of the issue?

- A. Application monitoring has been configured to use a single Cloud Proxy rather than a Collector Group.
- B. There is a compatibility issue between the version of Virtual Machine Hardware and VMware Tools.
- C. The Service Discovery Management Pack has not been configured.
- **D. There is a time synchronization issue between the Telegraf Agent and the Cloud Proxy.**

#### **Answer: D**

Explanation:

Application Monitoring in VCF Operations uses Telegraf agents running inside virtual machines. These agents forward metrics to theCloud Proxy, which then sends them to the Operations analytics cluster. One of the most common reasons an agent stops reporting data-especially exactly24 hoursafter deployment-is clock drift or time mismatchbetween the VM (running the Telegraf agent) and the Cloud Proxy.

VCF Operations enforcesstrict timestamp validation. If the timestamps from the agent are outside the acceptable drift window, the Cloud Proxyrejectsincoming data as invalid. In this case, the Telegraf agents appear installed and functional, but no new metrics are received by the analytics engine.

This is a well-known issue documented in VMware Aria/VCF Operations agent-based monitoring, where:

- \* Agents send metrics with local system time.
- \* Cloud Proxy enforces time validation to prevent corrupt metric ingestion.
- \* A drift >5 minutes commonly results inzero data collectiondespite healthy connectivity.

Options B and C cannot stop data flow after exactly 24 hours; they would preventinitialcollection. Option D (virtual hardware/tools compatibility) affects VM operations butnotTelegraf metric time-stamp validation.

#### **NEW QUESTION # 35**

An administrator is creating a new workload domain from VMware Cloud Foundation (VCF) Operations.

They are blocked at the Hosts selection screen as no ESX hosts are available. They see the following message:

"No suitable hosts available to create a VI workload domain. Hosts must be unassigned, commissioned with at least one physical NIC and the same storage type as the VI workload domain, and the ESX version must be compatible with the lowest ESX version present in the management domain." How can the administrator commission new hosts to enable the creation of the VI workload domain?

- **A. Using VCF Operations.**
- B. Using the VCF Installer.
- C. Using the Cloud Builder.
- D. Using the vSphere client.

#### **Answer: A**

Explanation:

In VMware Cloud Foundation 9.0,all host commissioning operationsare performed throughVCF Operations

, not through vSphere Client, Cloud Builder, or the VCF Installer. Once VCF is deployed, Cloud Builder is no longer used, and the VCF Installer is for lifecycle and bundle management-not for host workflows. The vSphere Client also cannot commission hosts because host commissioning is a foundational VCF workflow requiring hardware validation, storage type checks, NIC checks, HCL conformance, and version compatibility.

The error message provided:

"Hosts must be unassigned, commissioned with at least one physical NIC and the same storage type... and the ESX version must be compatible..." is a standard VCF 9.0 validation message shown whenno commissioned hosts matching the workload domain requirements exist. VMware documentation states that hosts must be commissioned under:

VCF Operations # Fleet Management # Hosts # Commission Host

Here, VCF validates:

- \* Storage type (vSAN ESA, vSAN OSA, NFS, FC, etc.)
- \* Network pool membership (matching the WLD plan)
- \* ESXi version compatibility with the Management Domain baseline
- \* NIC mapping and certifications

Until hosts are commissioned, they cannot appear in the workload domain creation wizard.

Thus, the correct method to commission hosts isD. Using VCF Operations.

### NEW QUESTION # 36

An administrator determined that the VMware NSX admin password expired on their VMware NSX Edge Transport nodes. The administrator manually resets the password in the console of each Edge Transport node.

What additional action is required to synchronize the new password in VMWare Cloud Foundation (VCF) Operations?

- A. In VCF Operations, sync the admin password for each NSX Edge Transport node.
- B. **In VCF Operations, remediate the admin password for each NSX Edge Transport node.**
- C. In VCF Operations, update the admin password for each NSX Edge Transport node.
- D. In VCF Operations, rotate the admin password for each NSX Edge Transport node.

**Answer: B**

Explanation:

In VMware Cloud Foundation 9.0, password changes made manually on an NSX Edge Transport Node are not automatically synchronized with VCF Operations. VCF Operations maintains secure credential records for all managed components, including NSX Manager appliances and NSX Edge Transport Nodes. When credentials become stale-such as after a password expiration and manual reset-VCF Operations marks the credential object as out of sync and requires administrative remediation.

The official workflow described in VCF 9.0 Operations documentation states that administrators must use the "Remediate Password" function whenever a password was changed outside of VCF Operations, ensuring that the platform revalidates and updates the stored credentials used for monitoring, log collection, and automation tasks. Options such as "rotate," "sync," or "update" do not apply because rotation implies generating a new password managed by VCF, and "sync" does not overwrite the stored credential. Only remediation forces VCF Operations to re-validate and align credentials with the external system.

Therefore, after manually resetting the NSX Edge admin password, the administrator must perform password remediation in VCF Operations to restore operational consistency, making B the correct and verified answer.

### NEW QUESTION # 37

.....

The Desktop VMware 2V0-15.25 Practice Exam Software contains real VMware 2V0-15.25 exam questions. This provides you with a realistic experience of being in an VMware 2V0-15.25 examination setting. This feature assists you in becoming familiar with the layout of the VMware 2V0-15.25 test and enhances your ability to do well on VMware Cloud Foundation 9.0 Support (2V0-15.25) examination.
