Knowledge makes prominent contributions to human civilization and progress. In the 21st century, the rate of unemployment is increasing greatly. Many jobs are replaced by intelligent machines. You must learn practical knowledge such as our SPLK-1003 actual test guide, which cannot be substituted by artificial intelligence. Now, our SPLK-1003 learning prep can meet your demands. You will absorb the most useful knowledge with the assistance of our study materials. The SPLK-1003 certificate is valuable in the job market. But you need professional guidance to pass the exam. For instance, our SPLK-1003 exam questions fully accords with your requirements.

Splunk Enterprise Certified Admin Sample Questions (Q31-Q36):

NEW QUESTION # 31

What is the correct curl to send multiple events through HTTP Event Collector?

- A. Option C
- B. Option D
- **C. Option B**
- D. Option A

Answer: C

Explanation:

```
curl "https://mysplunkserver.example.com:8088/services/collector" -H "Authorization: Splunk DF4S7ZE4-3GS1-8SFS-E777-0284GG91PF67" -d '{"event": "Hello World"}, {"event": "Hola Mundo"}, {"event": "Hallo Welt"}'
```

This is the correct curl command to send multiple events through HTTP Event Collector (HEC), which is a token-based API that allows you to send data to Splunk Enterprise from any application that can make an HTTP request. The command has the following components:

* The URL of the HEC endpoint, which consists of the protocol (https), the hostname or IP address of the Splunk server (mysplunkserver.example.com), the port number (8088), and the service name (services/collector).

* The header that contains the authorization token, which is a unique identifier that grants access to the HEC endpoint. The token is prefixed with Splunk and enclosed in quotation marks. The token value (DF4S7ZE4-3GS1-8SFS-E777-0284GG91PF67) is an example and should be replaced with your own token value.

* The data payload that contains the events to be sent, which are JSON objects enclosed in curly braces and separated by commas. Each event object has a mandatory field called event, which contains the raw data to be indexed. The event value can be a string, a number, a boolean, an array, or another JSON object. In this case, the event values are strings that say hello in different languages.

NEW QUESTION # 32

In inputs.conf, which stanza would mean Splunk was only reading one local file?

- A. [monitor:///opt/log/crashlog/Jan27crash.txt]
- B. [read://opt/log/crashlog/Jan27crash.txt]
- C. [monitor://opt/log/crashlog/Jan27crash.txt]
- D. [monitor:///opt/log/]

Answer: C

Explanation:

[monitor://opt/log/crashlog/Jan27crash.txt]. This stanza means that Splunk is monitoring a single local file named Jan27crash.txt in the /opt/log/crashlog/ directory1. The monitor input type is used to monitor files and directories for changes and index any new data that is added2.

NEW QUESTION # 33

Event processing occurs at which phase of the data pipeline?

- A. Parsing
- B. Search
- C. Indexing
- D. Input

Answer: A

Explanation:

According to the Splunk documentation1, event processing occurs at the parsing phase of the data pipeline. The parsing phase is where Splunk software processes incoming data into individual events, extracts timestamp information, assigns source types, and performs other tasks to make the data searchable1. The parsing phase can also apply field extractions, event type matching, and other transformations to the events2.

NEW QUESTION # 34

During search time, which directory of configuration files has the highest precedence?

- A. \$SPLUNK_HOME/etc/system/local
- B. \$SPLUNK_KCME/etc/system/default
- C. \$SPLUNK_HCME/etc/apps/app1/local
- D. \$SPLUNK_HCME/etc/users/admin/local

Answer: D

Explanation:

Adding further clarity and quoting same Splunk reference URL from @giubal"

"To keep configuration settings consistent across peer nodes, configuration files are managed from the cluster master, which pushes the files to the slave-app directories on the peer nodes. Files in the slave-app directories have the highest precedence in a cluster peer's configuration. Here is the expanded precedence order for cluster peers:

1. Slave-app local directories -- highest priority
2. System local directory

3. App local directories
4. Slave-app default directories
5. App default directories
6. System default directory --lowest priority

NEW QUESTION # 35

Which of the following accurately describes HTTP Event Collector indexer acknowledgement?

- **A. It requires a separate channel provided by the client.**
- B. It is configured the same as indexer acknowledgement used to protect in-flight data.
- C. It stores status information on the Splunk server.
- D. It can be enabled at the global setting level.

Answer: A

Explanation:

<https://docs.splunk.com/Documentation/Splunk/8.2.2/Data/AboutHECIDXAck>

- Section: About channels and sending data

Sending events to HEC with indexer acknowledgement active is similar to sending them with the setting off. There is one crucial difference: when you have indexer acknowledgement turned on, you must specify a channel when you send events. The concept of a channel was introduced in HEC primarily to prevent a fast client from impeding the performance of a slow client. When you assign one channel per client, because channels are treated equally on Splunk Enterprise, one client can't affect another. You must include a matching channel identifier both when sending data to HEC in an HTTP request and when requesting acknowledgement that events contained in the request have been indexed. If you don't, you will receive the error message, "Data channel is missing." Each request that includes a token for which indexer acknowledgement has been enabled must include a channel identifier, as shown in the following example cURL statement, where <data> represents the event data portion of the request

NEW QUESTION # 36

.....

The immediate downloading feature of our SPLK-1003 study materials is an eminent advantage of our products. Once the pay is done, our customers will receive an e-mail from our company. There is a linkage given by our e-mail, and people can begin their study right away after they have registered in. Our SPLK-1003 study materials are available for downloading without any other disturbing requirements as long as you have paid successfully, which is increasingly important to an examinee as he or she has limited time for personal study. Therefore, our SPLK-1003 Study Materials are attributive to high-efficient learning.
