### WGU Practical Applications of Prompt QFO1 Sample Questions (Q48-Q53):

#### NEW QUESTION # 48

Which strategy is effective for a company to promote the ethical use of AI?

- A. Require employees to use an AI model to make a decision for any ethical dilemma
- B. Use an AI system to evaluate job applicants based on fair and ethical criteria
- C. Encourage users to ethically evaluate AI responses using their personal data
- **D. Foster collaboration among diverse stakeholders to address ethical challenges**

**Answer: D**

Explanation:

The most effective strategy for promoting ethical AI is to foster collaboration among diverse stakeholders.

Ethics in AI is not a purely technical problem that can be "solved" with code; it is a socio-technical challenge that requires input from various perspectives, including ethicists, legal experts, social scientists, engineers, and, most importantly, the communities affected by the AI.

Diverse collaboration helps identify "blind spots" that a homogenous technical team might miss. For example, a developer might not realize that a specific data feature is a proxy for race or gender, but a sociologist or a community advocate might recognize it immediately. By bringing these voices together, a company can develop "Ethics by Design" frameworks that proactively address bias, transparency, and safety issues before the AI is deployed. This approach aligns with the principle of "Multidisciplinary Oversight," ensuring that the AI's goals are aligned with human values. Relying purely on the AI to solve its own ethical dilemmas (Option A) is dangerous, as the AI lacks a true moral compass. Instead, human-led collaboration ensures that technology remains a servant to societal well-being.

#### NEW QUESTION # 49

What is an important component to include in an AI prompt used to generate an image?

- A. File size
- B. Expected use
- C. Image resolution
- **D. Main subject**

**Answer: D**

Explanation:

In the context of text-to-image generative AI, the main subject is the most critical component of the prompt.

While technical parameters like resolution (Option C) or file size (Option D) can sometimes be adjusted via specific suffixes or settings, the AI cannot begin the diffusion process without a clear definition of what it is supposed to visualize. The main subject acts as the "anchor" for the entire generation process, providing the primary semantic information that the model uses to map noise to a coherent image.

An effective image prompt typically starts with the subject (e.g., "a golden retriever"), followed by descriptive modifiers (e.g., "wearing a space suit"), and finally, stylistic or environmental details (e.g., "cinematic lighting, 8k, digital art style"). If the main subject is vague or missing, the AI may produce a generic landscape or a chaotic abstract image. In professional design workflows, identifying the subject clearly ensures that the AI's creative "energy" is focused on the correct focal point. This allows the user to later refine the "medium" or "mood" of the image without changing the core content. Without a well-defined subject, the rest of the prompt's descriptors have no context to adhere to, leading to unpredictable and often unusable results.

### NEW QUESTION # 50

What is a risk associated with failing to include a goal when writing a prompt?

- A. Blatant misinformation
- **B. Inaccurate responses**
- C. Conflicting personas
- D. Nonsensical information

**Answer: B**

Explanation:

Failing to include a clear goal creates a significant risk of receiving inaccurate responses. In the context of AI, "inaccuracy" doesn't just mean a factual error; it also refers to an output that is "off-target" for the user's intent. Without a goal (the specific outcome the user wants to achieve), the AI is forced to make assumptions about what the user wants. These assumptions are often based on the most common patterns in its training data, which may not align with the user's actual needs.

For example, if a user provides context about a product but doesn't state the goal (e.g., "Write a product description," "Critique this product," or "Compare this product to X"), the AI might simply summarize the text provided. This response is "inaccurate" because it fails to fulfill the user's unspoken requirement. This lack of direction leads to a "hallucination of intent," where the AI provides a response that is technically coherent but practically useless. Clearly defining the goal is the most effective way to anchor the AI's logic, ensuring that the generated content is accurate in terms of both facts and function.

### NEW QUESTION # 51

Which major challenge has been an issue for AI systems?

- A. Analyzing vast amounts of data
- B. Processing unstructured data
- C. Generating video content
- **D. Lacking ethical reasoning**

**Answer: D**

Explanation:

One of the most significant and persistent challenges in the field of Artificial Intelligence is the lack of inherent ethical reasoning. AI models operate based on mathematical probabilities and patterns found within their training data; they do not possess a moral compass, a sense of justice, or an understanding of social nuances unless specifically programmed or constrained by human-defined rules. This often leads to issues where an AI might generate biased, harmful, or socially insensitive outputs because it is simply reflecting the biases present in its training set without any ethical filter.

While AI is actually quite proficient at analyzing vast amounts of data and is increasingly capable of processing unstructured data and generating video, the "black box" nature of its decision-making makes ethical alignment difficult. Ensuring that an AI respects privacy, avoids discrimination, and adheres to human values requires significant external intervention, such as Reinforcement Learning from Human Feedback (RLHF). The challenge lies in the fact that ethics are often subjective and context-dependent, making it nearly impossible to encode a universal moral code into a machine. This lack of ethical reasoning is why human oversight remains a critical component of AI deployment, especially in high-stakes fields like law, healthcare, and autonomous systems.

### NEW QUESTION # 52

Which content creation tool specializes in versatile image creation through detailed text prompts?

- A. DALL-E
- B. ChatGPT
- C. Invideo
- **D. Midjourney**

**Answer: D**

Explanation:

Midjourney is a generative AI tool that specifically specializes in high-quality, versatile image creation through sophisticated text prompts. While other tools like DALL-E are integrated into larger ecosystems (like OpenAI's ChatGPT), Midjourney has gained a reputation for its distinct artistic style, high resolution, and deep "parameter" controls that allow prompt engineers to fine-tune lighting, camera angles, and textures.

Midjourney operates primarily through a Discord interface, where users utilize "slash commands" (like /imagine) to initiate generations. It is favored by designers and concept artists because of its ability to interpret complex, evocative language into visually stunning outputs. Unlike ChatGPT, which is primarily a text-based LLM, Midjourney is a "Diffusion Model" specifically trained on image-caption pairs. Evaluating Midjourney as a medium requires understanding that the "syntax" of the prompt differs from text models; it relies heavily on artistic descriptors, style references (e.g., "unreal engine," "octane render"), and aspect ratio constraints to achieve the desired outcome.
