

AZ-305 New Braindumps Free, AZ-305 Latest Exam Book

DOWNLOAD the newest PassReview AZ-305 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1eD4J3New8_9QEe9-S-ygVRpsVirQrBvT

In today's technological world, more and more students are taking the AZ-305 exam online. While this can be a convenient way to take an Microsoft AZ-305 exam dumps, it can also be stressful. Luckily, PassReview's best Microsoft AZ-305 exam questions can help you prepare for your Microsoft AZ-305 Certification Exam and reduce your stress. If you are preparing for the Designing Microsoft Azure Infrastructure Solutions (AZ-305) exam dumps our AZ-305 Questions help you to get high scores in your AZ-305 exam.

Microsoft AZ-305 is a certification exam that focuses on designing Microsoft Azure infrastructure solutions. AZ-305 exam is intended for professionals who want to validate their skills in designing Azure-based solutions that meet business requirements. Designing Microsoft Azure Infrastructure Solutions certification is aimed at individuals who have a good understanding of Azure services, including compute, storage, network, and security, and who are interested in designing solutions for Azure-based workloads.

Microsoft AZ-305 Certification Exam is designed for professionals who want to demonstrate their expertise in designing Microsoft Azure infrastructure solutions. Designing Microsoft Azure Infrastructure Solutions certification is intended for individuals who have experience working with Azure services and are interested in designing solutions that use these services to meet customer

requirements.

AZ-305 Latest Exam Book & AZ-305 Reliable Test Test

Microsoft AZ-305 learning materials help you to easily acquire the Designing Microsoft Azure Infrastructure Solutions AZ-305 certification even if you have never touched the relative knowledge before. With our AZ-305 Exam Questions, you will easily get the favor of executives and successfully enter the gates of famous companies.

Achieving the Microsoft AZ-305 Certification demonstrates a candidate's expertise in designing Azure infrastructure solutions, and can help them advance their career in cloud computing. Designing Microsoft Azure Infrastructure Solutions certification is also a valuable asset for organizations that use Azure services, as it demonstrates that their employees have the skills and knowledge needed to design effective solutions that meet business requirements.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q125-Q130):

NEW QUESTION # 125

You have the Azure resources shown in the following table.

Name	Type	Location
US-Central-Firewall-policy	Azure Firewall policy	Central US
US-East-Firewall-policy	Azure Firewall policy	East US
EU-Firewall-policy	Azure Firewall policy	West Europe
USEastfirewall	Azure Firewall	Central US
USWestfirewall	Azure Firewall	East US
EUFirewall	Azure Firewall	West Europe

You need to deploy a new Azure Firewall policy that will contain mandatory rules for all Azure Firewall deployments. The new policy will be configured as a parent policy for the existing policies.

What is the minimum number of additional Azure Firewall policies you should create?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Explanation

Firewall policies work across regions and subscriptions.

Place all your global configurations in the parent policy.

Note: Policies can be created in a hierarchy. You can create a parent/global policy that will contain configurations and rules that will apply to all/a number of firewall instances. Then you create a child policy that inherits from the parent; note that rules changes in the parent instantly appear in the child. The child is associated with a firewall and applies configurations/rules from the parent policy and the child policy instantly to the firewall.

NEW QUESTION # 126

You need to recommend an Azure Storage Account configuration for two applications named Application1 and Applications. The configuration must meet the following requirements:

- * Storage for Application1 must provide the highest possible transaction rates and the lowest possible latency.
- * Storage for Application2 must provide the lowest possible storage costs per GB.
- * Storage for both applications must be optimized for uploads and downloads.
- * Storage for both applications must be available in an event of datacenter failure.

What should you recommend ? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point

Answer Area

Application1:

BlobStorage with Standard performance, Hot access tier, and Read-access geo-redundant storage (RA-GRS) replication

BlockBlobStorage with Premium performance and Zone-redundant storage (ZRS) replication

General purpose v1 with Premium performance and Locally-redundant storage (LRS) replication

General purpose v2 with Standard performance, Hot access tier, and Locally-redundant storage (LRS) replication

Application2:

BlobStorage with Standard performance, Cool access tier, and Geo-redundant storage (GRS) replication

BlockBlobStorage with Premium performance and Zone-redundant storage (ZRS) replication

General purpose v1 with Standard performance and Read-access geo-redundant storage (RA-GRS) replication

General purpose v2 with Standard performance, Cool access tier, and Read-access geo-redundant storage (RA-GRS) replication

Answer:

Explanation:

Answer Area

Application1:

BlobStorage with Standard performance, Hot access tier, and Read-access geo-redundant storage (RA-GRS) replication

BlockBlobStorage with Premium performance and Zone-redundant storage (ZRS) replication

General purpose v1 with Premium performance and Locally-redundant storage (LRS) replication

General purpose v2 with Standard performance, Hot access tier, and Locally-redundant storage (LRS) replication

Application2:

BlobStorage with Standard performance, Cool access tier, and Geo-redundant storage (GRS) replication

BlockBlobStorage with Premium performance and Zone-redundant storage (ZRS) replication

General purpose v1 with Standard performance and Read-access geo-redundant storage (RA-GRS) replication

General purpose v2 with Standard performance, Cool access tier, and Read-access geo-redundant storage (RA-GRS) replication

NEW QUESTION # 127

You are planning an Azure solution that will host production databases for a high-performance application. The solution will include the following components:

Two virtual machines that will run Microsoft SQL Server 2016, will be deployed to different data centers in the same Azure region, and will be part of an Always On availability group.

SQL Server data that will be backed up by using the Automated Backup feature of the SQL Server IaaS Agent Extension (SQLIaaSExtension) You identify the storage priorities for various data types as shown in the following table.

Data type	Storage priority
Operating system	Speed and availability
Databases and logs	Speed and availability
Backups	Lowest cost

Which storage type should you recommend for each data type? To answer, drag the appropriate storage types to the correct data types. Each storage type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Storage Types	Answer Area
A geo-redundant storage (GRS) account	Operating system:
A locally-redundant storage (LRS) account	Databases and logs:
A premium managed disk	Backups:
A standard managed disk	

Answer:

Explanation:

Storage Types	Answer Area
A geo-redundant storage (GRS) account	Operating system: A premium managed disk
A locally-redundant storage (LRS) account	Databases and logs: A premium managed disk
A premium managed disk	Backups: A locally-redundant storage (LRS) account
A standard managed disk	

NEW QUESTION # 128

You have an Azure subscription that contains a Basic Azure virtual WAN named VirtualWAN1 and the virtual hubs shown in the following table.

Name	Azure region
Hub1	US East
Hub2	US West

You have an ExpressRoute circuit in the US East region.

You need to create an ExpressRoute association to VirtualWAN1.

What should you do first?

- A. Create a gateway on Hub1.
- B. Create a hub virtual network in US East.
- C. Enable the ExpressRoute premium add-on.
- D. Upgrade VirtualWAN1 to Standard.

Answer: D

Explanation:

US East and US West are in the same geopolitical region so there is no need for enabling ExpressRoute premium add-on

<https://docs.microsoft.com/en-us/azure/virtual-wan/virtual-wan-about#basicstandard> The current config of virtual WAN is only Basic as given, so it can connect to only site to site VPN, to connect to express route it needs to be upgraded from basic to standard.

<https://docs.microsoft.com/en-us/azure/virtual-wan/virtual-wan-about>

<https://docs.microsoft.com/en-us/azure/virtual-wan/virtual-wan-about>

NEW QUESTION # 129

You are designing a point of sale (POS) solution that will be deployed across multiple locations and will use an Azure Databricks workspace in the Standard tier. The solution will include multiple apps deployed to the on-premises network of each location.

You need to configure the authentication method that will be used by the app to access the workspace. The solution must minimize the administrative effort associated with staff turnover and credential management.

What should you configure?

- A. a personal access token

- Answer: C**
