

NetSec-Pro Prüfungsfragen, NetSec-Pro Fragen und Antworten, Palo Alto Networks Network Security Professional

P.S. Kostenlose 2025 Palo Alto Networks NetSec-Pro Prüfungsfragen sind auf Google Drive freigegeben von Pass4Test verfügbar: <https://drive.google.com/open?id=1bTuBjdOkqV9fQk-1vD41RsKoeFM9v0d4>

Um Sie unbesorgter online Palo Alto Networks NetSec-Pro Prüfungsunterlagen bezahlen zu lassen, wenden wir Paypal und andere gesicherte Zahlungsmittel an, um Ihre Zahlungssicherheit zu garantieren. Nach der Zahlung dürfen Sie gleich die Palo Alto Networks NetSec-Pro Prüfungsunterlagen herunterladen. Außerdem wenn die Palo Alto Networks NetSec-Pro Prüfungsunterlagen aktualisiert haben, werden unsere System Ihnen automatisch Bescheid geben. Pass4Test auszuwählen bedeutet, dass den Dienst mit anspruchsvolle Qualität auswählen.

Palo Alto Networks NetSec-Pro Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Infrastructure Management and CDSS: This section tests the abilities of security operations specialists and infrastructure managers in maintaining and configuring Cloud-Delivered Security Services (CDSS) including security policies, profiles, and updates. It includes managing IoT security with device IDs and monitoring, as well as Enterprise Data Loss Prevention and SaaS Security focusing on data encryption, access control, and logging. It also covers maintenance and configuration of Strata Cloud Manager and Panorama for network security environments including supported products, device addition, reporting, and configuration management.
Thema 2	<ul style="list-style-type: none"> FW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.

Thema 3	<ul style="list-style-type: none"> Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.
Thema 4	<ul style="list-style-type: none"> Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.
Thema 5	<ul style="list-style-type: none"> Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.

Palo Alto Networks NetSec-Pro VCE Dumps & Testking IT echter Test von NetSec-Pro

Pass4Test hilft Ihnen, Palo Alto Networks NetSec-Pro Prüfungsfragen und Antworten in einer echten Umgebung zu machen. Wenn Sie Einsteiger sind und Ihre beruflichen Fähigkeiten verbessern wollen, werden die Fragenkataloge zur Palo Alto Networks NetSec-Pro Zertifizierungsprüfung von Pass4Test Ihnen helfen, Ihren Traum Schritt für Schritt zu verwirklichen. Wir werden alle Ihren Fragen bezüglich der Prüfung lösen. Innerhalb eines Jahres bieten wir Ihnen kostenlosen Update-Service. Bitte schenken Sie unserer Website mehr Aufmerksamkeit.

Palo Alto Networks Network Security Professional NetSec-Pro Prüfungsfragen mit Lösungen (Q28-Q33):

28. Frage

How does a firewall behave when SSL Inbound Inspection is enabled?

- A. It acts as meddler-in-the-middle between the client and the internal server.
- B. It acts transparently between the client and the internal server.
- C. It decrypts traffic between the client and the external server.
- D. It decrypts inbound and outbound SSH connections.

Antwort: A

Begründung:

SSL Inbound Inspection allows the firewall to decrypt incoming encrypted traffic to internal servers (e.g., web servers) by acting as a man-in-the-middle (MITM). The firewall uses the private key of the server to decrypt the session and apply security policies before re-encrypting the traffic.

"SSL Inbound Inspection requires you to import the server's private key and certificate into the firewall. The firewall then acts as a man-in-the-middle (MITM) to decrypt inbound sessions from external clients to internal servers for inspection." (Source: SSL Inbound Inspection)

29. Frage

A network engineer pushes specific Panorama reports of new AI URL category types to branch NGFWs. Which two report types achieve this goal? (Choose two.)

- A. Custom
- B. PDF summary
- C. CSV export
- D. SNMP

Antwort: A,B

Begründung:

Panorama allows engineers to create custom reports and generate PDF summary formats for consistent reporting across NGFWs. Custom Reports

"Custom Reports provide tailored reporting based on URL categories, application usage, and threat visibility.

They are generated within Panorama and can include data on newly categorized AI URL types." (Source: Panorama Reports) PDF Summaries

"You can generate PDF summary reports to distribute these insights across branch firewalls, providing an easy-to-read format for compliance and operational review." (Source: Export Reports as PDF) Together, these options provide a consistent, standardized method to push insights about AI-based URL categories to branch devices.

30. Frage

A primary firewall in a high availability (HA) pair is experiencing a current failover issue with ICMP pings to a secondary device. Which metric should be reviewed for proper ICMP pings between the firewall pair?

- A. Non-functional state
- B. Heartbeat polling
- C. Bidirectional Forwarding Detection (BFD)
- D. Link monitoring

Antwort: B

Begründung:

Heartbeat polling is a core HA function to monitor connectivity between HA peers, leveraging ICMP pings to determine link health and availability.

"Heartbeat Polling uses ICMP pings to verify the connectivity and health of the HA peers. If heartbeat polling fails, the firewall considers the peer to be down and may initiate failover." (Source: HA Link and Path Monitoring) If ICMP pings fail, checking heartbeat polling logs helps identify if link or path monitoring triggers the failover.

31. Frage

Which action allows an engineer to collectively update VM-Series firewalls with Strata Cloud Manager (SCM)?

- A. Scheduling software update
- B. Creating a device grouping rule
- C. Setting a target OS version
- D. Creating an update grouping rule

Antwort: B

Begründung:

Device grouping rules in SCM allow administrators to organize firewalls into logical groups and collectively manage updates or configuration pushes across those groups.

"SCM allows you to create device group rules, enabling streamlined management and collective updates of multiple NGFW instances." (Source: SCM Device Grouping) This approach ensures consistency in software versions and configuration baselines across large deployments.

32. Frage

Which two configurations are required when creating deployment profiles to migrate a perpetual VM-Series firewall to a flexible

VM? (Choose two.)

- A. Choose "Fixed vCPU Models" for configuration type.
- B. Deploy virtual Panorama for management.
- C. Allocate the same number of vCPUs as the perpetual VM.
- D. Allow only the same security services as the perpetual VM.

Antwort: C,D

Begründung:

When migrating from a perpetual VM-Series firewall license to a flexible VM licensing model, two critical steps are needed:

Allocate same number of vCPUs- This ensures that the VM-Series capacity remains consistent and avoids resource bottlenecks.

"When migrating perpetual VM-Series licenses to flexible VM licensing, allocate the same vCPU and memory resources to ensure equivalent performance." (Source: VM-Series Flexible Licensing Migration) Limit to same security services- Flexible licensing requires maintaining the same security services to preserve licensing compliance.

"Ensure that you allow only the same security services on the flexible VM instance as were licensed on the perpetual VM." (Source: Flexible Licensing and Service Subscriptions)

33. Frage

.....

Unser Pass4Test stellt Ihnen die besten Fragen und Antworten zur Palo Alto Networks NetSec-Pro Zertifizierungsprüfung zur Verfügung und führt Ihnen schrittweise zum Erfolg. Die Schulungsunterlagen zur Palo Alto Networks NetSec-Pro Zertifizierungsprüfung von Pass4Test werden Ihnen eine reale Prüfungsvorbereitung bieten. Sie sind ganz zielgerichtet. Sie werden sicher ein IT-Expert werden. Unsere Palo Alto Networks NetSec-Pro Schulungsunterlagen sind Ihnen am geeignetesten. Tragen Sie doch in unserer Website ein. Sie werden sicher etwas Unerwartetes bekommen.
