VCE C_CPI_2506 Dumps & C_CPI_2506 Exam Reviews

Now is not the time to be afraid to take any more difficult SAP Certified Associate - Integration Developer C_CPI_2506 certification exams. Our C_CPI_2506 learning quiz can relieve you of the issue within limited time. Our website provides excellent C_CPI_2506 learning guidance, practical questions and answers, and questions for your choice which are your real strength. You can take the SAP C_CPI_2506 Training Materials and pass it without any difficulty.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

Topic 2	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 3	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP Certified Associate - Integration Developer Sample Questions (Q20-Q25):

NEW QUESTION # 20
In an Event-Driven Architecture (EDA), which architectural characteristic best limits the propagation of failure from one service to another?

- A. Loose coupling between services minimizes cascading failures.
- B. Robust error handling prevents service disruption.
- C. Asynchronous communication buffers immediate failure impact.
- D. Centralized logging facilitates rapid failure identification.

Answer: A

Explanation:
In Event-Driven Architecture, resilience is ensured by:
Loose coupling # Services do not depend on each other's runtime availability. A failure in one service does not directly impact others.
This design minimizes cascading failures that can occur in tightly coupled systems.
Asynchronous communication and error handling help further, but loose coupling is the fundamental characteristic that limits failure propagation.
Incorrect options:
A # Robust error handling is important but not the main architectural limiter of cascading failures.
C # Centralized logging helps with troubleshooting, not failure prevention.
D # Asynchronous buffering mitigates impact but loose coupling fundamentally prevents direct propagation.

NEW QUESTION # 21
What can you do in the Cloud Integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question

- A. Connect to multiple endpoints.
- B. Develop custom adapters.
- C. Develop complex integration scenarios in Python.
- D. Connect to different cloud runtime environments.

Answer: A,B

Explanation:
In the Cloud Integration capability within SAP Integration Suite, you can do the following things:
Connect to multiple endpoints. You can use various adapters and protocols to connect to different systems and applications, such as SAP S/4HANA, Salesforce, SuccessFactors, and more.
Develop custom adapters. You can use the Adapter Development Kit (ADK) to create your own adapters for specific integration scenarios and requirements. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration

NEW QUESTION # 22

In the SAP Integration Suite, where can you change the virtual host name?

- A. Design APIs
- B. Settings APIs
- C. Discover - APIs
- D. Configure ? APIs

Answer: B

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 23

Which SAP Cloud Integration process event allows you to run integration flows directly after deployment?

- A. Timer
- B. Message Digest
- C. Content Modifier
- D. Router

Answer: A

Explanation:

A Timer event allows you to run integration flows directly after deployment. A Timer event is triggered by a predefined schedule or interval, such as every hour, every day, or every month. You can use a Timer event to initiate an integration process based on a time-based condition. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 24

You want to implement a synchronous call to a remote HTTP API as an integration flow component.Which adapter can you use?

- A. OData
- B. AMQP
- C. SFTP
- D. Mail

Answer: A

Explanation:

For a synchronous call to a remote HTTP API in an integration flow:
The OData adapter (or HTTP adapter) is used to perform synchronous request-reply communication with REST-based services.
AMQP # Messaging protocol, not synchronous.
SFTP # File-based transfer, asynchronous.
Mail # For SMTP/IMAP, not synchronous API calls.
Thus, the correct adapter for a synchronous remote API call is OData (or HTTP adapter, depending on configuration).

NEW QUESTION # 25
