Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q26-Q31):

NEW QUESTION # 26
Your organization is planning to deploy FortiWeb in Azure to provide a web application security solution to its web servers. One of the requirements is to have granular control of the number of vCPUs and memory assigned to this resource.
Which cloud model could meet this requirement?

- A. Platform-as-a-Service (PaaS)
- B. Software-as-a-Service (SaaS)
- C. Infrastructure-as-a-Service (IaaS)
- D. Function-as-a-Service (FaaS)

Answer: C

Explanation:
Infrastructure-as-a-Service (IaaS)allows you to deploy FortiWeb as a virtual machine in Azure, giving you granular control over vCPU and memory allocation. This model provides full flexibility over the compute resources and network configuration, which is essential for deploying and scaling security appliances like FortiWeb.

NEW QUESTION # 27
You want to take advantage of Azure availability zones for your cloud-based Fortinet deployment.
Which two benefits do Azure availability zones provide? (Choose two.)

- A. Enhanced protection for application and data in a single Azure region
- B. Protect applications and data through high availability with fault isolation and redundancy
- C. Protect applications and data across multiple Azure regions
- D. Improve database performance and reliability

Answer: A,B

Explanation:
Enhanced protection for application and data in a single Azure region - Availability Zones provide physical separation of infrastructure within a single Azure region, protecting against datacenter-level failures.
Protect applications and data through high availability with fault isolation and redundancy - They offer fault isolation and redundancy, enabling high availability for applications and services by distributing them across multiple zones within the same region.

NEW QUESTION # 28
You are deploying a site-to-site IPsec VPN connection between your on-premise subnet and your Azure VNets.
What is the most important advantage for using FortiGate at both ends of the tunnel?

- A. It reduces the need for troubleshooting due to FortiGate automatic configuration
- B. It minimizes the need for encryption in transit
- C. It provides consistent security policies and configurations
- D. It allows scaling based on performance and capacity requirements

Answer: C

Explanation:
UsingFortiGate at both endsof a site-to-site IPsec VPN tunnel provides the advantage of applyingconsistent security policies, configurations, and management toolsacross both the on-premises and Azure environments. This simplifies policy enforcement, improves operational efficiency, and ensures uniform threat protection.

NEW QUESTION # 29
What is a requirement when you deploy a FortiGate active-active cluster in Azure?

- A. You must configure both load balancers to allow administrative access.
- B. You must configure all FortiGate VMs with three or more interfaces.
- C. You must assign the public IP address to an Azure load balancer.
- D. You must use unicast FGCP to synchronize the configurations.

Answer: C

Explanation:
In anactive-active FortiGate clusterdeployment in Azure, you must assign thepublic IP address to an Azure load balancer. This is required because Azure does not support multiple VMs sharing a single public IP directly. TheAzure Load Balancerhandles inbound traffic and distributes it to the active FortiGate instances.

NEW QUESTION # 30
Why would you use a user-defined route in Azure?

- A. To manage user authentication and access control
- B. To have the traffic from the other VMs inspected by FortiGate
- C. To allow inbound management access to FortiGate VMs
- D. To allow communication between FortiGate VMs on two subnets in the same VNET

Answer: B

Explanation:
Auser-defined route (UDR)in Azure is used toredirect trafficfrom other VMsthrough a FortiGate VM for inspection. By modifying the routing table, you ensure that outbound or inter-subnet traffic issent to the FortiGate as the next hop, enablingtraffic filtering, logging, and security enforcement.
