## Free PDF Professional CheckPoint - 156-315.81 Valid Exam Tutorial

156-315.81 latest cram material covers all the sections of the actual exam. The CheckPoint 156-315.81 practice exam has the questions very similar to the actual exam, and all the 156-315.81 answers are checked and confirmed by our professional expert. Our 156-315.81 study pdf is especially designed to give you a unique experience and make sure your success pass. If you fail in the 156-315.81 actual test, we will give you full refund. If you have other exam to be taken, we can free replace it for you.

The Check Point Certified Security Expert R81 certification provides individuals with the skills and knowledge required to

successfully design, implement, and manage a comprehensive security architecture using Check Point Security Gateway and Management Software Blades. Check Point Certified Security Expert R81 certification covers topics such as advanced firewall configuration, VPN, network address translation (NAT), and advanced user management. Check Point Certified Security Expert R81 certification is intended for security professionals who want to enhance their skills and knowledge in Check Point security solutions and stay up-to-date with the latest security trends and threats.

## Familiarize yourself with the format of the CheckPoint 156-315.81 Exam

The first step in preparing for the CheckPoint 156-315.81 Exam is familiarizing yourself with the format of the exam. While there are many resources that you can use to prepare for this exam, it is important that you understand what it will cover.

There are two sections of this exam: Reading Comprehension, Analytic Reasoning

Reading Comprehension is the first section of the exam and covers topics such as Basic Security Concepts, Cyber Operations, System Penetration Testing, Ethical Hacking and Social Engineering. This section will help you understand how to identify threats on networks and make decisions based on situational awareness. It also helps test your ability to recognize risks associated with cyber security incidents and preventative measures taken by organizations against them. **CheckPoint 156-315.81 Exam Dumps** is designed to provide comprehensive and accurate information about the subject, and is ideal for anyone looking to develop a career in the security industry.

Analytic Reasoning tests your ability to solve problems by using logic and reasoning skills in identifying solutions or patterns. You will need to analyze information provided through questions about cyber security incidents or events that have occurred in the past decade (such as Stuxnet) or present day scenarios such as WannaCry ransomware attack on companies across world wide.

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q321-Q326):

### NEW QUESTION # 321

What is true about the IPS-Blade?

- A. In R81, IPS Exceptions cannot be attached to "all rules"
- B. In R81, the GeoPolicy Exceptions and the Threat Prevention Exceptions are the same
- C. In R81, IPS is managed by the Threat Prevention Policy
- D. In R81, in the IPS Layer, the only three possible actions are Basic, Optimized and Strict

**Answer: C**

Explanation:

In R81, IPS is managed by the Threat Prevention Policy. The Threat Prevention Policy is a unified policy that allows you to configure and enforce IPS, Anti-Bot, Anti-Virus, Threat Emulation, and Threat Extraction settings in one place. Reference: Threat Prevention Administration Guide

### NEW QUESTION # 322

After finishing installation admin John likes to use top command in expert mode. John has to set the expert-password and was able to use top command. A week later John has to use the top command again, He detected that the expert password is no longer valid. What is the most probable reason for this behavior?

- A. "write memory" was not issued on clish
- B. "save config" was not issued in expert mode
- C. changes are only possible via SmartConsole
- D. "save config" was not issued on clish

**Answer: D**

### NEW QUESTION # 323

You had setup the VPN Community VPN-Stores'with 3 gateways. There are some issues with one remote gateway(1.1.1.1) and an your local gateway. What will be the best log filter to see only the IKE Phase 2 agreed networks for both gateways

- A. action:"Key Install- AND 1.1.1.1 AND Quick Mode
- B. Blade:"VPN" AND VPN-Stores AND Quick Mode
- C. action:"Key Install" AND 1.1.1.1 AND Main Mode
- D. Blade:"VPN" AND VPN-Stores AND Main Mode

**Answer: A**

Explanation:

The best log filter to see only the IKE Phase 2 agreed networks for both gateways is B. action:"Key Install" AND 1.1.1.1 AND Quick Mode1. This filter will show you the logs that indicate the successful establishment of IKE Phase 2, which is also known as Quick Mode2. In this phase, the Security Gateway and the remote gateway negotiate the IPSec Security Associations (SAs) and exchange the encryption keys for the VPN tunnel2. The action:"Key Install" field shows that the SAs were installed successfully3. The 1.1.1.1 field shows that the logs are related to the remote gateway with that IP address3. The Quick Mode field shows that the logs are related to IKE Phase 2, as opposed to Main Mode, which is IKE Phase 13. To use this filter, you need to go to SmartConsole, open SmartLog, and enter the filter expression in the search box3.

### NEW QUESTION # 324

In R81.20 a new feature dynamic log distribution was added. What is this for?

Configure the Security Gateway to distribute logs between multiple active Log Servers to support a better rate of Logs and Log Servers redundancy.

In case of a Management High Availability the management server stores the logs dynamically on the member with the most available disk space in /var/log Synchronize the log between the primary and secondary management server in case of a Management High Availability To save disk space in case of a firewall cluster local logs are distributed between the cluster members.

**Answer:**

Explanation:

<https://resources.checkpoint.com/datasheet/certified-security-expert-ccse-r8120-course-overview>

Dynamic log distribution is a feature that allows you to configure the Security Gateway to distribute logs between multiple active Log Servers to support a better rate of Logs and Log Servers redundancy. This means that each log is sent to only one Log Server and the load is balanced between the primary Log Servers. If all the primary Log Servers are disconnected, the logs are distributed between the backup Log Servers. If no Log Servers are connected, the gateway writes the logs locally. This feature improves the performance and reliability of logging and reduces the network traffic and disk space consumption. You can enable this feature on the SmartConsole -> Gateways & Servers -> Logs -> Dynamic Log Distribution1.

The other options are incorrect because they do not describe the dynamic log distribution feature. Option B is wrong because the Management High Availability does not store the logs dynamically on the member with the most available disk space, but rather synchronizes the logs between the members using the cpd process2.

Option C is wrong because the dynamic log distribution feature does not synchronize the logs between the primary and secondary management server, but rather distributes the logs between the Log Servers. Option D is wrong because the dynamic log distribution feature does not save disk space in case of a firewall cluster, but rather distributes the logs between the Log Servers. The firewall cluster members do not store local logs, but rather send them to the Log Servers3.

### NEW QUESTION # 325

VPN Link Selection will perform the following when the primary VPN link goes down?

- A. The Firewall can update the Link Selection entries to start using a different link for the same tunnel.
- B. The Firewall will drop the packets.
- C. The Firewall will send out the packet on all interfaces.
- D. The Firewall will inform the client that the tunnel is down.

**Answer: A**
