If you still have doubt about our CAD exam dumps. Please pay attention to our CAD free demo on the product page. You can download the free demo and have a try. Then I believe you can make the decision. Generally, there are explanations along with the questions, which will make you learn more about the knowledge about CAD Actual Test. Please prepare well with the CAD study material we provide for you. We guarantee you can pass the CAD actual test with a high score.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q192-Q197):

NEW QUESTION # 192
Which one of the following is NOT a debugging strategy for client-side scripts?

- A. jslog()
- B. g_form.addInfoMessage()
- C. gs.log()
- D. Field Watcher

Answer: C

NEW QUESTION # 193
Which one of the following is true for a Script Include with a Protection Policy value of Protected?

- A. The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store
- B. The Protection policy option can only be enabled by a user with the admin role
- C. Any user with the protected_edit role can see and edit the Script Include
- D. The Protection Policy is applied only if the glide.app.apply_protection system property value is true

Answer: A

Explanation:
https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_ScriptProt The following is true for a Script Include with a Protection Policy value of Protected:
* The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store.
This is true because the Protection Policy is a feature that allows developers to protect their Script
* Includes from being viewed or modified by other users when they distribute their applications through the ServiceNow App Store. The Protection Policy is only enforced when the application is installed from the App Store, not when it is developed or tested on the instance.
The following are not true for a Script Include with a Protection Policy value of Protected:
* Any user with the protected_edit role can see and edit the Script Include. This is false because the protected_edit role is not related to the Protection Policy, but to the Access Control (ACL) rules. The protected_edit role allows users to edit protected fields on a table, such as the script field on the sys_script table, which stores the Business Rules. The Protection Policy does not use roles to control access to the Script Includes, but a cryptographic key that is generated when the application is published to the App Store.
* The Protection policy option can only be enabled by a user with the admin role. This is false because the Protection policy option can be enabled by any user who has the application_admin role for the scoped application that contains the Script Include. The application_admin role grants full access to the application development and administration within the scope of the application.
* The Protection Policy is applied only if the glide.app.apply_protection system property value is true.
This is false because the glide.app.apply_protection system property is not related to the Protection Policy, but to the Application Restricted Caller Access (ARCA) feature. The ARCA feature allows developers to restrict the access to the Script Includes from other applications based on the caller's scope. The glide.app.apply_protection system property determines whether the ARCA feature is enabled or disabled on the instance. NEW QUESTION # 194
Which roles grant access to source control repository operations such as importing applications from source control, or linking an application to source control? (Choose two.)

- A. git_admin
- B. source_control_admin
- C. source_control
- D. admin

Answer: C,D

Explanation:
The following roles grant access to source control repository operations such as importing applications from source control, or linking an application to source control:
source_control. This is a role that allows users to perform basic source control operations, such as importing an application from a source control repository, updating an application from a source control repository, or committing changes to a source control repository.
admin. This is a role that grants full access to all the features and functions of the ServiceNow platform, including source control

operations. Users with this role can also perform advanced source control operations, such as creating or deleting source control repositories, configuring source control properties, or resolving conflicts.

The following roles do not grant access to source control repository operations:

source_control_admin. This is not a valid role in ServiceNow. There is no separate role for source control administration, as this function is included in the admin role.

git_admin. This is not a valid role in ServiceNow. Git is a specific type of source control system that ServiceNow supports, but there is no role dedicated to Git administration. Reference: Source Control, Source Control Roles

NEW QUESTION # 195

What is the ServiceNow store?

- A. Marketplace for free and paid certified ServiceNow applications and integrations
- B. Alternate name for the ServiceNow Developer Share site
- C. The source for ServiceNow Community created developer content
- D. Downloadable content ServiceNow script archive

Answer: A

Explanation:

The ServiceNow Store is a marketplace for free and paid certified ServiceNow applications and integrations.

The ServiceNow Store provides customers with access to Now Certified enterprise workflow apps from partners that complement and extend ServiceNow products and solutions. Customers can browse, try, buy, and deploy apps and integrations that suit their needs and enhance their ServiceNow experience. The ServiceNow Store is not the source for ServiceNow Community created developer content, as that is available on the Developer Portal or the Share site. The ServiceNow Store is not a downloadable content ServiceNow script archive, as that is available on the Script Library or the Script Repository. The ServiceNow Store is not an alternate name for the ServiceNow Developer Share site, as that is a separate site where developers can share applications, code snippets, UI pages, etc. Reference: ServiceNow Store

NEW QUESTION # 196

Why would you build a custom app?

- A. To replace servieNow base tables
- B. To fulfill is specific use case on internal processes.
- C. To create a custom integration for a 3rd party system
- D. To avoid using a code repository like GiotHub or GitLab

Answer: B,C

Explanation:

A possible reason to build a custom app is to fulfill a specific use case on internal processes. For example, you may want to digitize a manual process that is not covered by an existing ServiceNow solution, such as managing inventory, tracking expenses, or scheduling events. Building a custom app on the Now Platform can help you automate workflows, improve data quality, and provide better user experiences. The other options are not valid reasons to build a custom app. To avoid using a code repository like GitHub or GitLab is not a reason to build a custom app, as you can still use source control integration with your custom app development. To create a custom integration for a 3rd party system is not a reason to build a custom app, as you can use integration tools such as IntegrationHub or REST APIs to connect with external systems without creating an app. To replace ServiceNow base tables is not a reason to build a custom app, as it is not recommended to modify or delete base tables that are essential for ServiceNow functionality.
