Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q453-Q458):

NEW QUESTION # 453

Refer to the exhibit.

What does the message indicate?

- A. a successful access attempt was made to retrieve the password file
- B. an access attempt was made from the Mosaic web browser
- C. a denied access attempt was made to retrieve the password file
- D. a successful access attempt was made to retrieve the root of the website

Answer: D

NEW QUESTION # 454

Which data type is necessary to get information about source/destination ports?

- A. statistical data
- B. session data
- C. alert data
- D. connectivity data

Answer: B

Explanation:

Session data is the data type that is necessary to get information about source/destination ports. Session data is the information about connections between hosts, such as IP addresses, ports, protocols, and duration. Session data can be used to identify the services and applications that are being used on the network, as well as the direction and volume of the traffic. Session data can also help to detect anomalous or malicious behavior, such as port scanning, brute force attacks, or data exfiltration. Session data can be collected from various sources, such as firewalls, routers, switches, or network monitoring tools. References:

* Cisco Certified CyberOps Associate Certification Guide, Chapter 3: Data Sources, Section 3.2: Session Data (<https://www.ciscopress.com/store/cisco-certified-cyberops-associate-certification-guide-9780136807834>)

NEW QUESTION # 455

Refer to the exhibit A SOC analyst is examining the Auth.log file logs of one the breached systems What is the possible reason for this event log?

- A. brute force attack on Linux from 10.10.10.10
- B. regular Linux log and 10.10.10.10 is legitimate host
- C. password cracking DoS attack on Windows endpoint
- D. brute force attack on Windows from 10.10.10.10

Answer: D

NEW QUESTION # 456

What is a difference between a threat and a risk?

- A. A risk is a flaw or hole in security, and a threat is what is being used against that flaw

- B. A threat can be people property, or information, and risk is a probability by which these threats may bring harm to the business
- C. A risk is an intersection between threat and vulnerabilities, and a threat is what a security engineer is trying to protect against
- D. A threat is a sum of risks and a risk itself represents a specific danger toward the asset

Answer: C

Explanation:

In cybersecurity, a threat is any potential malicious attack or event that can harm an organization, while a risk is the potential damage or loss that could occur if a threat exploits a vulnerability. Therefore, risk is considered the intersection of threats and vulnerabilities, representing the likelihood and impact of a threat materializing.

NEW QUESTION # 457

Refer to the exhibit.

Which kind of attack method is depicted in this string?

- A. cross-site scripting
- B. denial of service
- C. man-in-the-middle
- D. SQL injection

Answer: A

Explanation:

* The image shows a piece of code within a bordered rectangular area.

* It is a string of HTML code that appears to be an example of an attack, specifically "".

* The code suggests an attempt to execute JavaScript within an image source attribute, indicative of a cross-site scripting attack.

NEW QUESTION # 458

.....
