SPLK-1002題庫更新，新版SPLK-1002題庫上線

PDFExamDumps是個為Splunk SPLK-1002 認證考試提供短期的有效培訓的網站，但是PDFExamDumps能保證你的 Splunk SPLK-1002 認證考試及格。如果你不及格，我們會全額退款。在你選擇購買PDFExamDumps的產品之前，你可以在PDFExamDumps的網站上免費下載我們提供的部分關於Splunk SPLK-1002認證考試的練習題及答案作為嘗試，那樣你會更有信心選擇PDFExamDumps的產品來準備你的Splunk SPLK-1002 認證考試。

最新的 Splunk Core Certified Power User SPLK-1002 免費考試真題 (Q113-Q118):

問題 #113

What is the correct syntax to find events associated with a tag?

- A. tag=<value>
- B. tags:<field>=<value>
- C. tag:<field>=<value>
- D. tags=<value>

答案：A

解題說明：

The correct syntax to find events associated with a tag in Splunk is `tag=<value>1`. So, the correct answer is D.

`tag=<value>`. This syntax allows you to annotate specified fields in your search results with tags1.

In Splunk, tags are a type of knowledge object that you can use to add meaningful aliases to field values in your data1. For example, if you have a field called `status_code` in your data, you might have different status codes like 200, 404, 500, etc. You can create tags for these status codes like `success` for 200, `not_found` for 404, and `server_error` for 500. Then, you can use the `tag` command in your searches to find events associated with these tags1.

Here is an example of how you can use the `tag` command in a search:

```
index=main sourcetype=access_combined | tag status_code
```

In this search, the `tag` command annotates the `status_code` field in the search results with the corresponding tags.

If you have tagged the status code 200 with `success`, the status code 404 with `not_found`, and the status code 500 with `server_error`, the search results will include these tags1.

You can also use the `tag` command with a specific tag value to find events associated with that tag. For example, the following search finds all events where the status code is tagged with `success`:

```
index=main sourcetype=access_combined | tag status_code | search tag::status_code=success
```

In this search, the `tag` command annotates the `status_code` field with the corresponding tags, and the `search` command filters the results to include only events where the `status_code` field is tagged with `success`1.

問題 #114

Which of the following searches will return events containing a tag named Privileged?

- A. `tag=privileged`
- B. `tag=Priv*`
- C. `tag=Priv`
- D. `tag=priv*`

答案: B

解題說明:

Explanation/Reference: <https://docs.splunk.com/Documentation/PCI/4.1.0/Install/PrivilegedUserActivity>

問題 #115

A user runs the following search:

```
index=X sourcetype=Y | chart count (domain) as count, sum (price) as sum by product, action
```

usenull=f useother=f Which of the following table headers match the order this command creates?

- A. The `chart` command does not allow for multiple statistical functions.
- B. `Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, sum: purchase`
- C. `Count: product, sum: product, count: action, sum: action`
- D. `Product, sum: addtocart, sum: remove, sum: purchase, count: addtocart, count: remove, count: purchase`

答案: B

解題說明:

The correct answer is C. `Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, sum: purchase`1.

In Splunk, the `chart` command is used to create a table or a chart visualization from your data2.

The `chart` command takes at least one function and one field, and optionally another field to group by2.

In the given search, the `chart` command is used with two functions (`count` and `sum`), two fields (`domain` and `price`), and two fields to group by (`product` and `action`). The `usenull=f` and `useother=f` options are used to exclude null values and other values from the chart2. The `chart` command creates a table with headers that match the order of the fields and functions in the command1. The headers for the `count` function are prefixed with `count:`, and the headers for the `sum` function are prefixed with `sum:`1. The values of the `product` and `action` fields are used as the suffixes for the headers1.

Therefore, the table headers created by this command are `Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, and sum: purchase`1.

問題 #116

Which of the following searches show a valid use of a macro? (Choose all that apply.)

- A. `index=main source=mySource oldField=* | "newField('makeMyField(oldField)')"' | table _time newField`
- B. `index=main source=mySource oldField=* | eval newField='makeMyField(oldField)' | table _time newField`
- C. `index=main source=mySource oldField=* | 'makeMyField(oldField)' | table _time newField`
- D. `index=main source=mySource oldField=* | stats if('makeMyField(oldField)') | table _time newField`

答案：B,C

解題說明：

Explanation

The searches A and C show a valid use of a macro. A macro is a reusable piece of SPL code that can be called by using single quotes ('). A macro can take arguments, which are passed inside parentheses after the macro name. For example, 'makeMyField(oldField)' calls a macro named makeMyField with an argument oldField.

The searches B and D are not valid because they use double quotes (") instead of single quotes (').

問題 #117

What does the fillnull command do in this search?

`index=main sourcetype=http:log | fillnull value="Unknown"`

- A. Set all fields that are null to "Unknown".
- B. Set the values of the field to null when it is "Unknown".
- C. Set all fields with the value of "Unknown" to null.
- D. Set the values of the field to "Unknown" if it is null.

答案：D

解題說明：

The fillnull command replaces null values in fields with a specified replacement value.

Extract: "Use fillnull to replace null field values with a string or numeric value that you specify." Thus, in this case, all null field values are replaced with "Unknown."

問題 #118

.....

你是一名IT人員嗎？你報名參加當今最流行的IT認證考試了嗎？如果你是，我將告訴你一個好消息，你很幸運，我們PDFExamDumps Splunk的SPLK-1002考試認證培訓資料可以幫助你100%通過考試，這絕對是個真實的消息。如果你想在IT行業更上一層樓，選擇我們PDFExamDumps那就更對了，我們的培訓資料可以幫助你通過所有有關IT認證的，而且價格很便宜，我們賣的是適合，不要不相信，看到了你就知道。
